BCMA	CNH STATUS (Renamed from CNH/SH STATUS)

2.6. Disabled Nutrition [NUT] Extracts and Associated Reports

Nutrition (NUT) is removed from the Fiscal Year Logic (DSS Testing Only) option

Disabling NUT Extract and associated reports will occur during the post-installation and will change the INACTIVE field of the EXTRACT DEFINITION file to "YES" which will indicate NUT extract is inactive.

NUT has been removed from the 'Print Feeder Keys' and 'Print Feeder Location' reports.

The option 'Nutrition Extract' [ECXNUT] has been removed from the 'Package Extracts' menu and has been marked 'out of order'.

The option 'Nutrition (NUT) Extract Audit' [ECX NUT SOURCE AUDIT] has been removed from the 'Extract Audit Reports' menu and has been marked 'out of order'.

The option 'Nutrition Worksheets' [ECX NUTRITION WORKSHEETS] has been removed from the 'Maintenance' menu and has been marked 'out of order'.

2.7. Modified Blood Bank [LBB] Extract

The Blood Bank [LBB] Extract [ECXLBB] option has been updated by changing the starting point from BEG^ECXLBB to BEG^ECXLBB1. This was done to insure that only records from the VBECS system are being reported.

2.8. Modify Transmission Email Header information

Modified the transmission routine to prevent the truncation of the total number of records being sent. The subject for the email message has been modified to use the 3 character abbreviation for each extract, as well as removing unneeded characters and spaces so that the subject line contains the total number of records sent.

2.9. Special Character Filter

The transmission routine ECXTRANS has been modified to remove the "!" character from all transmissions. Note, the character has been removed from the data that is sent to Austin, but it will still reside in the DSS extract file.

2.10. Fiscal Year selection removed from report

The fiscal year logic option has been removed from the IV UNUSUAL VOLUME REPORT.

2.11. Standardize the terminology used in report columns

In the reports Clinics and DSS Stop Codes Print [ECXSCLIST] and Enter/Edit DSS Stop Codes for Clinics Print [ECXSCEDIT], there is inconsistent use of the terms Credit Stop Code, DSS Credit Stop Code, 4Char, Char4 and others. The column headings have been standardized across the reports.

2.12. Add 3 reason fields to Event Capture and Quasar Extracts.

Add the new procedure reason fields to the Event Capture and Quasar extracts. The fields are based on the newly added fields in the EVENT CAPTURE PATIENT file, Procedure Reason, Procedure Reason #2 and Procedure Reason #3.

NOTE: the fields will be reported blank in the Quasar extract.

2.13. Add Primary Procedure to Clinic Extract

A new field has been added to the DSS CLINIC Extract, Primary Procedure which identifies if the procedure listed is the principal procedure identified in the V CPT file.

2.14. Add New Clinic Report option

A new option, DUPLICATE CLINICS, has been added to the Clinics and DSS Stop Codes Print report. This report will identify Clinics that have duplicate information for the following fields. DSS STOP CODE, DSS CREDIT STOP CODE, CHAR4 CODE, CLINIC APPT LENGTH and DIVISION.

2.15. Insure only locations defined as Clinics appear in Clinic reports

For the reports generated in options:

- Enter/Edit DSS Stop Codes for Clinics,
- DSS Identifier Non-Conforming Clinics Report,
- DSS Clinic & Stop Codes Validity Report

Make sure that all locations being reported are defined as clinics in the HOSPITAL LOCATION file.

2.16. Remove Stop Code filtering in Clinic Extract

The code that was filtering/not listing Stop Codes 105 and 108 has been removed from the Clinic Extract.

2.17. Add New Subscription field to Unit Dose Extract

A new field and associated code has been added to the Unit Dose Local extract to report if a prescription is new. The code will identify the first time a medication is given to a patient after being verified by a pharmacist. For those entries, the record will be marked as being a new prescription.

2.18. Change the data source for the Radiology extract

The source for the RADIOLOGY extract was previously based on the EXAM DATE field of the REGISTERED EXAM multiple of the RAD/NUC MED PATIENT file. The code will now use VERIFIED DATE field of the RAD/NUC MED REPORTS file to identify exams that are completed.

2.19. Add 3 new Pathologist Fields to the Laboratory (LAB) extract

Three new fields have been added to the DSS Laboratory Extract, PATHOLOGIST, PATHOLOGIST PERSON CLASS and PATHOLOGIST PROVIDER NPI. These fields are based on the Pathologist information captured in the Laboratory Package.

2.20. Add Military Service History fields to 10 DSS Extracts

Two new fields, COMBAT VETERAN INDICATOR and COMBAT VETERAN LOCATION, have been added to the following 10 DSS Extracts:

- Admissions (ADM)
- Bar Code Medical Administration (BCM)
- Clinic (CLI)
- Event Capture System (ECS)
- Quasar (ECQ)
- IV Detail (IVP)
- Prescription (PRE)
- Prosthetics (PRO)
- Surgery (SUR)
- Unit Dose Local (UDP)

The Fields are populated/set by information stored in the Patient File, COMBAT SERVICE INDICATED and COMBAT SERVICE LOCATION fields respectively.

2.21. Add information to Prosthetics Unusual Cost Report

The report has been modified to list the actual PSAS HCPCS code, and to identify if the type of transaction listed is New(N), Repair(X) or Rental(R).

2.22. Add NPPD codes to Prosthetics Extract Audit Report

The report has been modified to allow the user to select the following NPPD Codes:

- 700 D
- 900 O
- 900 P
- 910 B
- 999 P1
- 999 P2
- R80 F
- R99 B
- R99 P

2.23. Exportability of DSS Reports

The following reports have been modified so that they can be exported into Excel spreadsheets.

- National Clinic Codes for DSS List
- Clinic Edit Log Report
- Print IV Room Worksheet
- Print Feeder Keys
- Print Feeder Locations
- Active MAS Wards for Fiscal Year Print
- Primary Care Team Print
