Technical Services
Computerized Patient Record System Product Line

Revision History

Date	Page	Change	Project Manager	Technical Writer
4/30/07	46	Revised section about CPRSUpdate.	A. Ebert	T. Robinson
6/7/06	90	Added a link to the hardware requirements online because they were outdated.	n/a	T. Robinson
12/30/04	various	Minor changes for SOP compliance.	n/a	T. Robinson
10/14/98	35	Removed step about ORPURGE TASK		
10/15/98	14	Added explanation of global journaling		
10/20/98	ii	Added this revision history page		
10/28/98	44	Release Notes (enhancements since 12/97) added		
11/20		Various changes		
12/3/98	47	Corrections to enhancements descriptions, per changes to patch 24		
1/15/99	43	Added hardware recommendations		
1/15/99	47	Updated Release Notes		
2/5/99	53, 65	Updated Release Notes; added to resolved E3Rs		
3/8/99	52	Updated Release Notes (GUI patch 10v11)		
5/25/99	44	Added Consults/TIU setup		
6/2/99	62	Updated E3R Resolved list		
6/21/99		Updated Release Notes (GUI patch 10v12)		
7/19/99	4	Removed instructions for pharmacy archiving and purging		
3/6/2000	9	Removed instructions about journaling OCXD		

		global.		
	38	Changed example of DGPM Movement Events		

Table of Contents

Introduction

Purpose of Installation Guide

This Installation Guide describes how to prepare for, install, and set up the Computerized Patient Record System (CPRS) V. 1.0 (both the List Manager, terminal-based version and the Windows-based GUI version).

CPRS is the combined installation of Order Entry/Results Reporting V. 3.0, Consult/Request Tracking V. 3.0, Inpatient Medications V. 5.0, Outpatient Pharmacy V. 7.0, and supporting patches.

Related Manuals

Outpatient Pharmacy V. 7.0 Technical Manual

Pre-Install Instructions

- We recommend that you install CPRS first in a training or test account that is a mirror of your production account.

- We recommend that you start installation into your production account on a Friday night, to allow time over the weekend for the conversions to run. As soon as CPRS is installed, new versions of Order Entry/Results Reporting, Consult/Request Tracking, Outpatient Pharmacy, and Inpatient Medications will be in place.

  Estimated Installation and Conversion Times
  Installation: 30-90 minutes
  Conversions: approximately two-three days

- Install the "Released Patch" and "Unreleased Patch" builds after the main CPRS installation and before the post-installation steps.

- Update the Terminal Type file for the VT100s, if necessary.

  If the "Insert Line" field is empty, this will cause List Manager to revert back to scroll mode

  List Manager uses 11 video attributes, which are in the Terminal Type file (#3.2). These are listed (along with recommended values) in the Site Preparation section of the *List Manager Developer's Guide* (http://www.vista.med.va.gov/softserv/infrastr.uct/index.html).

Attribute	Value for a VT series terminal
Form Feed	#,$C(27,91,50,74, 27,91,72)
XY CRT	W $C(27,91)_((DY+1))_$C(59)_((DX+1))_$C(72)
Erase to End of Page	$C(27,91,74)
Insert Line	$C(27),"[L"
Underline On	$C(27,91,52,109)
Underline Off	$C(27,91, 109)
High Intensity	$C(27,91,49,109)
Normal Intensity	$C(27,91,109)
Save Cursor Pos	$C(27,55)
Restore Cursor Pos	$C(27,56)
Set Top/Bottom Marg	$C(27,91)_(+IOTM)_$C(59)_(+IOBM)_$C(114)

■ **Ensure that Patch OR*2.5*49 is implemented.**

)**NOTE**: If OE/RR has never been installed at your site, it isn't necessary to install and implement Patch 49.

After you install Patch 49, review your menus and quick orders, using the options on the Implementation Menu, to ensure that everything was converted correctly, and to make any desired changes.

Many locally created quick orders include entry and exit actions containing M code. These can't be converted as such, but must be modified by options on the CPRS Implementation Menu included with Patch 49. They can then be converted with the *Convert Protocols* on the same menu.

Create a system-wide default Add Orders menu
If your site has a default *Add Orders* menu, this will be converted.
If your site doesn't have a default *Add Orders* menu, a new one will have to be created, using the options on the *Implementation Menu* of patch 49 or the *Order Menu Management* menu on the *CPRS Configuration Menu (Clin Coord)*. CPRS doesn't import a working *Add Orders* menu (the exported one is an example with placeholders — the quick orders don't work).

■ **Make sure all required V***IST*A **software is installed**

Before CPRS can be installed, the following packages and patches must be installed and *fully* patched in your accounts.

Application Name	Minimum Version
Automated Information Collection System (AICS)	V 3.0
Adverse Reaction Tracking (ART)	V 4.0
Authorization/Subscription Utility (ASU)	V 1.0
***Consolidated Mail Outpatient Pharmacy (CMOP)	V 2.0
**Consult/Request Tracking	V 2.5 GMRC*2.5*17
Dietetics	V 5.0
Gen. Med. Rec.-Vitals	V. 3.0
Health Summary	V. 2.7
HL7	V. 1.6
Integrated Funds Distribution, Control Point Activity, Accounting & Procurement (IFCAP)	V. 4.0
*Inpatient Medications (IM)	V. 4.5
Integrated Billing (IB)	V. 2.0
Kernel	V. 8.0
Laboratory	V. 5.2
Lexicon Utility	V. 2.0

Application Name	Minimum Version
National Drug File (NDF)	V. 3.17
*Order Entry/Results Reporting (OE/RR)	V. 2.5
*Outpatient Pharmacy	V. 6.0
Patient Care Encounter (PCE)	V. 1.0
Pharmacy Data Management (PDM)	V. 1.0
Problem List	V 2.0
Radiology/Nuclear Medicine	V 4.5
RPC Broker	V 1.1
Registration	V 5.3
Scheduling	V 5.3
Text Integration Utilities (TIU)	V 1.0
ToolKit	V. 7.3
VA FileMan	V. 21.0
Visit Tracking	V 2.0

* If the package is installed on your system prior to CPRS, the required version and patches must be installed. If they are not installed, the package will be installed with CPRS.

** GMRC*2.5*17 should be installed *just* before CPRS. If you make any updates to the GMRCR protocol file links after this install and prior to the CPRS install, you must run GMRCRFIX again (which means installing the patch again).

*** Patch PSX*2*3 is required if you have CMOP installed.

■ **Make sure that you have at least 300-400 meg free disk space before installing CPRS.**

It is recommended that CPRS test sites increase their symbol table to 204,800.

■ **(CMOP sites) Ensure that required CMOP tasks are completed.**

To prevent data corruption and/or interruption of background processes, the following pre-installation tasks *must* be completed *prior to the installation* of the CPRS KIDS Build. This ensures that the installation is not running simultaneously with CMOP data transmissions, background release filer, or other associated tasks.

CMOP pre-install tasks, cont'd

Step 1 – Determine System Status for CMOP

Use the *Display System Setup* [PSXR STATUS] option from the *CMOP Site Manager Menu* [PSXR CMOP MANAGER] to review the CMOP System Status. CMOP can be inactivated only if line one of the display includes the text, "No current transmission." If this text is not displayed, a CMOP process is currently running and **inactivation** cannot take place. Once the task is completed, the display will read "No current transmission," as in line one of the CMOP System Status report shown below. If line one does not contain the text "No current transmission," try again later. Normally, CMOP tasks require only a few minutes to complete, so the waiting time to retry should be minimal.

Example Step 1:

```
Select the CMOP Site Manager Menu Option: DISplay System Setup

                  CMOP SYSTEM STATUS

LEAVENWORTH   (ACTIVE)               No current transmission
CMOP Domain                          : CMOP-LEAV.MED.VA.GOV
Last Batch Transmitted               : 338
CMOP RX Queue purged                 : SEP 19,1997@08:41:14
Auto Transmission setup              : YES

Select CMOP Site Manager Menu Option: <Enter>
```

Step 2 – Record Auto Transmission Information for Rescheduling

If the last line of the display in the example above reads:

```
Auto Transmission setup        : NO
```

Proceed directly to Step 3.
If the last line of the display in the example above reads:

```
Auto Transmission setup        : YES
```

Auto Transmission setup is in effect. Use the *Setup Auto-transmission* [PSXR AUTO TRANSMIT] menu option from the *Transmission Menu* [PSXR TRANSMIT MENU] on the *CMOP Site Manager Menu* [PSXR CMOP MANAGER] to display the information regarding the current transmission schedule. Print the screen display or retain this information for reference when completing the Post Install Tasks to reschedule Auto Transmissions.

CMOP pre-install tasks, cont'd

Example Step 2:

```
Select CMOP Site Manager Menu Option:  Transmission Menu

Select Transmission Menu Option:  Setup Auto-transmission

Auto Transmissions are already scheduled.
Current schedule began        :  Aug 05, 1997 6:00 pm
Number of days to transmit thru:  1
Next transmission scheduled for:  Sep 04, 1997@18:00
Rescheduling Frequency        :  24 hours

Do you want to unschedule automatic processing ? NO//<Enter>

Select CMOP Site Manager Menu Option: <Enter>
```

Step 3 – Inactivate CMOP Processing

Use the *Activate/Inactivate CMOP Processing* [PSXR ACTIVATE] option from the
CMOP Site Manager Menu [PSXR CMOP MANAGER] to inactivate CMOP as illustrated
in the following example.

+   If prescription workload is currently suspended for CMOP transmission, a WARNING
message will be displayed as shown in the example below. Take no action on this warning.
These prescriptions will be handled appropriately when the patch Post Install Tasks are
completed and CMOP processing is Activated.

Example Step 3:

```
Select CMOP Site Manager Menu Option: ACtivate/Inactivate CMOP Processing
        ************************************************************
        WARNING:  There are Rx's currently suspended for CMOP.

        If you inactivate CMOP processing:
        1)  These Rx's will not transmit to the CMOP, but will remain
            in the RX SUSPENSE file.  These Rx's cannot be accessed by
            Outpatient Pharmacy options.  Ideally, these Rx's should
            be transmitted or printed before inactivation takes place.
            If CMOP processing is activated, these prescriptions can
            be transmitted.
        2)  Before inactivating, please have all pharmacy users sign
              off until inactivation is complete.  CMOP Rx's input by
            users who do not sign off the system will be suspended for
            CMOP transmission. (See #1)
        3)  Your current auto transmission schedule will be
            cancelled on inactivation.
        ************************************************************

LEAVENWORTH is the current active CMOP system.

Do you want to Inactivate the LEAVENWORTH system? NO// YES
Are you sure? NO// YES

The LEAVENWORTH system has been inactivated.
Activate another system? NO//  <Enter>
```

CMOP pre-install tasks, cont'd

Selecting Display System Setup as follows will show the site has inactivated.

```
Select CMOP Site Manager Menu Option: DISplay System Setup
Enter CMOP System:      LEAVENWORTH          INACTIVE

                              CMOP SYSTEM STATUS

LEAVENWORTH    (INACTIVE)             No current transmission
CMOP Domain                                   : CMOP-LEAV.MED.VA.GOV
Last Batch Transmitted                        : 338
CMOP RX Queue purged                          : SEP 19,1997@08:41:14
Auto Transmission setup                       : NO
```

Step 4 – Check the CMOP Resource Device

To prevent CMOP background tasks, such as the CMOP Release Filer from running during the install and possibly causing data corruption, carefully follow the instructions listed below. Any CMOP task currently running must be allowed to complete before the resource device entry is locked. Check Taskman as shown below for PSX namespaced tasks running:

Example Step 4a:
```
Select Systems Manager Menu Option: TASKman Management

Select Taskman Management Option: LISt Tasks
                        List Tasks Option

                        All your tasks.
                        Your future tasks.
                        Every task.
                        List of tasks.
                        Unsuccessful tasks.
                        Future tasks.
                        Running tasks.

                  Select Type Of Listing: Running tasks.

Running tasks...

240905: ^XMADJF0, MailMan Delivery Mover.  No device.  BAB,PAA.
        From TODAY at 8:43,  By you.  Started running TODAY at 8:43.
        Job #: 43
----------------------------------------------------------------
235907: TRANS^PSXRSUS, CMOP Data Transmission.  Device PSX. WPB,PAA.
  From TODAY at 9:10,  By you.  Started running TODAY at 9:10
        Job #: 46
```

In the previous example, task number 235907, Job #46 is a PSX namespaced CMOP task currently running. Continue to list running tasks in this manner until this task is completed and no other PSX tasks are running.

CMOP pre-install tasks, cont'd

Example Step 4b: **Checking the Resource device:**

Display of the PSX Resource DEVICE entry when IN USE:

```
Select OPTION NAME:      EVE          Systems Manager Menu
Select Systems Manager Menu Option: FM  VA FileMan

          VA FileMan Version 21.0

Select VA FileMan Option: Inquire to File Entries

OUTPUT FROM WHAT FILE: RESOURCE// <Enter>
Select RESOURCE NAME: PSX
ANOTHER ONE: <Enter>
STANDARD CAPTIONED OUTPUT? Yes//  <Enter> (Yes)
Include COMPUTED fields:  (N/Y/R/B): NO// <Enter> - No record number (IEN), no
Computed Fields

NAME: PSX                                AVAILABLE SLOTS: 0
SLOT IN USE: 1                           JOB #: 46

Select RESOURCE NAME: <Enter>
```

Display of the Resource DEVICE entry for PSX when FREE:

```
Select Systems Manager Menu Option: FM  VA FileMan
        VA FileMan Version 21.0
Select VA FileMan Option: Inquire to File Entries
OUTPUT FROM WHAT FILE: RESOURCE// <Enter>
Select RESOURCE NAME: PSX
ANOTHER ONE: <Enter>
STANDARD CAPTIONED OUTPUT? Yes// <Enter>  (Yes)
Include COMPUTED fields:  (N/Y/R/B): NO// <Enter> - No record number (IEN), no
Computed Fields

NAME: PSX                                AVAILABLE SLOTS: 1
Select RESOURCE NAME: <Enter>
```

Step 5 – Edit the CMOP Resource Device entry

When the display (Step 4, Example 4b) indicates the PSX device entry in the RESOURCE file (#3.54) is *free* (i.e., **Available Slots=1**), the PSX device entry may be edited and locked as shown in the example below. Locking the device in this manner signals Taskman that the device is busy. Tasks scheduled for this device will be placed on the waiting list for the device and not run until Taskman indicates the device is free.

CMOP pre-install tasks, cont'd

Example Step 5:

Editing the Resource file (#3.54) entry for PSX to lock the device:

```
Select Systems Manager Menu Option: FM  VA FileMan
VA FileMan Version 21.0
Select VA FileMan Option: Enter or Edit File Entries

INPUT TO WHAT FILE: RESOURCE// <Enter>
EDIT WHICH FIELD: ALL// AVAILABLE SLOTS

THEN EDIT FIELD: SLOTS IN USE      (multiple)
   EDIT WHICH SLOTS IN USE SUB-FIELD: ALL// <Enter>
THEN EDIT FIELD: <Enter>

Select RESOURCE NAME: PSX
AVAILABLE SLOTS: 1//  @ - use the '@' sign to delete this value in the field
   SURE YOU WANT TO DELETE? Y  (Yes)
Select SLOT IN USE: 1
  CPU/VOL: <Enter>
  JOB #: <Enter>
  Select SLOT IN USE: <Enter>
```

The screen indicating the PSX Resource Device is FREE will now be displayed.

◼ **Place and protect the two new globals introduced with CPRS:**

Global	Type	Comments	Placement	Journal	Protection
OCXD	dynamic	The maximum size for this global will be about 138,000 blocks with raw data logging turned on and about 6000-7000 blocks with raw data logging turned off	Place in a volume set large enough for this kind of growth	Not applicable	RWP or D
OCXS	static		Place in the same volume set as the OR and other CPRS globals	Sign into a partition with journaling disabled; after installation, re-enable journaling	RWP or D

■ **Load the distribution for CPRS V. 1.0**

+ **NOTE:** We recommend that you set your PC or terminal for scroll-back (with a large enough buffer size) and plan to run the installation to the screen. This will allow you to monitor the process and include the scrolling region data in the history log.

Select the option *Kernel Installation and Distribution System*, XPD MAIN. Choose the *Installation* option, followed by the option, *Load the distribution*. When prompted to enter a host file, enter CPRS1_0.KID, as shown below:

```
>D ^XUP

Select OPTION NAME: XPD MAIN     Kernel Installation & Distribution System

          Edits and Distribution ...
          Utilities ...
          Installation ...

Select Kernel Installation & Distribution System Option: INstallation

   1      Load a Distribution
   2      Verify Checksums in Transport Global
   3      Print Transport Global
   4      Compare Transport Global to Current System
   5      Backup a Transport Global
   6      Install Package(s)
          Restart Install of Package(s)
          Unload a Distribution

Select Installation Option: LOAD a Distribution
Enter a Host File: D:\ANONYMOUS\CPRS1_0.KID

KIDS Distribution saved on Dec 29, 1997@07:46:23

Comment: CPRS 1.0

This Distribution contains Transport Globals for the following Package(s):

     CPRS 1.0
        ORDER ENTRY/RESULTS REPORTING 3.0
        OUTPATIENT PHARMACY VERSION 7.0
        PSS*1.0*1
        INPATIENT MEDICATIONS 5.0
        CONSULT/REQUEST TRACKING 3.0

        GMPL*2.0*10
        FH*5.0*6
        LR*5.2*166
        CPRS POST INSTALL 1.0

    PSS*1.0*1

    INPATIENT MEDICATIONS 5.0
Will first run the Environment Check Routine, PSJIENV

    CONSULT/REQUEST TRACKING 3.0
    GMPL*2.0*10
    FH*5.0*6
    LR*5.2*166
    CPRS POST INSTALL 1.0

Use INSTALL NAME: CPRS 1.0 to install this Distribution.

Select Installation Option:
```

■ **(optional) Print a list of package components with the KIDS Build File Print option** if you would like a complete listing of package components (e.g., files, routines, and options) exported with this software.

> + **NOTE**: You must request separate prints for each of the components of this multi-package build.

■ **Verify Checksums in the transport global.**

Run the option *Verify Checksums in Transport Global* to verify that all routines have the correct checksum. If there are any discrepancies, do not run the Install Package(s) option. Instead, run the Unload a Distribution option to remove the Transport Global from your system. Log a NOIS and/or call the national Help Desk and report the problem.

■ **Unschedule the ORTASK PURGE option.** This functionality will be re-introduced with a patch to CPRS V. 1.0.

■ **Take users off the system.** (The sequential order for this and the next two steps is up to your site's discretion.)

■ **Shut down Taskman.**

■ **Back up all systems.**

■ **Unmap OR*, GMRC*, and PS* Routines.**

■ **Sign into a partition with journaling disabled.**

During installation, journaling needs to be disabled for the following globals:
OR, OCXS, ORD, GMR, XTV, PS.

During the conversion, the following globals are modified and will generate entries in the journal files: OR, PS, and PSRX.

NOTE: Make sure you have adequate journal space available to enable journaling *after* CPRS is installed. The conversion will continue for approximately 24 – 48 hours after CPRS is installed. You will need to monitor your journal space during the time that the conversion is running.

■ **Delete OR*, GMRC*, and PSO* routines.**

Use the system utility to delete all GMRC*, OR*, and PSO* routines. If you have local modifications to any PSO* routines, back up those routines. After installation of Outpatient Pharmacy V. 7.0, compare routines to note the changes between your locally modified routines and the V. 7.0 routines. Version 7.0 of Outpatient Pharmacy has been modified greatly; please be careful when installing local modifications.

Inpatient Medications routines exported in previous versions are automatically deleted with this installation if they are not used in V. 5.0.

Installation

A new mail group will be added that generates bulletins when the order check expert system rules are invoked. KIDS will ask you for this mail group and for someone in IRM to be assigned as the mail group coordinator.

```
Enter the Coordinator for Mail Group 'OCX DEVELOPERS':
```

This bulletin lets IRMS know when someone edits the rules and recompiles the system. If no one wants to get these bulletins, then enter POSTMASTER. After the installation has finished, remove POSTMASTER from the bulletin in the bulletin file.

■ **Install CPRS 1.0**

Select the option Kernel Installation and Distribution System, XPD MAIN. Choose the Installation option, followed by the option, Installation. When prompted to enter the install name, enter CPRS 1.0, as shown below:

```
>D ^XUP

Select OPTION NAME: XPD MAIN     Kernel Installation & Distribution System

          Edits and Distribution ...
          Utilities ...
          Installation ...

Select Kernel Installation & Distribution System Option: INstallation
```

CPRS Installation Example
```
   1       Load a Distribution
   2       Verify Checksums in Transport Global
   3       Print Transport Global
   4       Compare Transport Global to Current System
   5       Backup a Transport Global
   6       Install Package(s)
           Restart Install of Package(s)
           Unload a Distribution

CPRS POST INSTALL 1.0 Installed.
                Aug 28, 1996@12:34:43
```

Post-Installation

■ **Install the "Released Patch" and "Unreleased Patch" builds after the main CPRS installation and before the following post-installation steps.**

■ **Review and edit CPRS parameters, if necessary.**

Use the CPRS Configuration Menu (Clin Coord) to review and edit OE/RR parameters. See the *CPRS Setup Guide* for more details.

OE/RR parameters
Notifications
Notifications are exported as disabled to allow the installation and conversions to run more efficiently. To initiate notifications, use the *Enable or Disable Notification System* option to enable Notifications. This option is on the *Notification Mgmt Menu* under the *CPRS Manager Menu* option

Order Checking
Use the *Enable or Disable Order Checking System* option to enable order checking for users or systems. This option is on the *Order Checking Mgmt Menu* on the *CPRS Manager Menu*.

If your site is multidivisional, you can enable or disable the system for each division.

Link lab, radiology, and DNR terms used in the CPRS Expert System to local terms using the option *Edit Local Terms* on the *Order Checking Mgmt Menu*. Because some terms used for ordering (lab test names, for example) vary from site to site, the order checking system has created a file of standard terms related to the order checks used in CPRS. Sites must map the locally used term in the Orderable Items file (#124) or the Lab Test file (#60) to one in the order check file. After mapping the terms, the system automatically re-compiles the order checking rules. A message is sent to the person mapping the terms when the compiling has completed.

Order Check National Terms
    SERUM CREATININE
    SERUM UREA NITROGEN
    DNR
    PROTHROMBIN TIME
    THROMBOPLASTIN TIME PARTIAL
    NPO
    SERUM SPECIMEN
    PARTIAL THROMBOPLASTIN TIME
    ANGIOGRAM (PERIPHERAL)
     WBC

Consult/Request Tracking Parameters

To implement Consults, follow the steps below:

1. Define Service Hierarchy
Sites must determine which services/specialties should be set up to receive consults and requests. The Request Services file (#123.5) is distributed with a small selection of services. The hierarchical relationships are not in place upon distribution.

2. Set up Consults Services
Once you've defined (on paper) a service/specialty hierarchy, use the option *Set up Consult Services* on the *Consult Management* menu to create the hierarchy.

3. Set Up Consult Protocols
To set up protocols that can be used on an *Add New Orders* menu, use the *Set up Consult Protocols* on the *Consult Management* menu.

4. Set Up Consult Site Parameters
The *Set up Consult Site Parameters* option on the *Consult Management* menu lets you define a medicine service for each site or division in multi-division or multi-site facilities.

- **See the *Consult/Request Tracking Technical Manual* for instructions and examples of the above set-up steps.**

5. Define CONSULTS for the TIU/CT Interface
Patch TIU*1.0*4 contains an option that allows you to set Consults up as part of the Document Definition hierarchy. A description of this setup is included in Appendix A of this manual.

Outpatient Pharmacy Parameters

Pharmacy ADPACs: Set up Outpatient Pharmacy parameters, using guidelines in the *Outpatient Pharmacy Technical Manual* or the *CPRS Set-Up Guide*.

MUMPS Audiofax (Telephone Refill Requests)
If you are using MUMPS Audiofax to process telephone refill requests, a new VEXRX routine must be installed to interface with Outpatient Pharmacy V. 7.0. To install this routine, go to SHOP ALL on FORUM and in the TELEPHONE REFILL REQUESTS Basket, retrieve the message "VEXRX for Outpatient V. 7." This message contains the new VEXRX routine. This routine must be forwarded and installed on your production account.

☞ **Important :** You cannot process telephone refill requests (MUMPS Audiofax) without the new VEXRX routine.

Inpatient Medications Parameters

Pharmacy ADPACs: Set up Inpatient Medications parameters, using guidelines in the *Inpatient Medications Technical Manual* or the *CPRS Set-Up Guide*.

■ **Re-build the map set for the following OR*, GMRC*, and PS* routines:**

OE/RR routines:
1. Do Not Map: `OCXOHL7, OCXODGPM, OCXOERR, OCXOEPS, OCXOZ*`

2. Mapping Recommended: `ORC*, ORM*`

Pharmacy routines:
Routines not listed here are used sparingly, and can be mapped if desired.

1. Do Not Map
  `PSGXR* PSJIP*   PSJXR*`

The PSGXR* and PSJXR* routines are created by VA FileMan when it compiles the cross-references of the NON-VERIFIED ORDERS (#53.1) and PHARMACY PATIENT (#55) files.

2. Mapping Highly Recommended

```
PSGAL5     PSGAMSA    PSGAP*     PSGAXR     PSGCAP*    PSGCT      PSGDL
PSGDS*     PSGEUD     PSGGAO     PSGIU      PSGL*      PSGMAR*    PSGMMAR*
PSGNE3     PSGO*      PSGP       PSGPEN     PSGPL*     PSGPR      PSGRETPSGS0
PSGSEL     PSGSET*    PSGSICHK   PSGTAP*    PSGTI      PSGVBW*    PSGVDSPSGVW*
PSIV       PSIVACT    PSIVAL     PSIVCAL    PSIVCHK*   PSIVHYP*   PSIVLABL
PSIVLBL1   PSIVLTR*   PSIVMAN*   PSIVOPT    PSIVORE*   PSIVPRO    PSIVSTAT
PSIVSUS*   PSIVUWL    PSIVVW*    PSIVWL*    PSIVXU     PSJA*      PSJEEU*
PSJHL*     PSJL*      PSJO*      PSJP
```

3. Mapping Recommended

```
PSGAMS     PSGAMS0    PSGBRJ     PSGDC*     PSGFILD*   PSGFILED
PSGSC*     PSGSH      PSGTC*     PSIVDCR*   PSIVHLD    PSIVOE*
PSIVQUI    PSIVRQ*    PSIVSP
```

Consults routines

```
GMRCA1     GMRCACTM   GMRCAFRD   GMRCALRT   GMRCASV    GMRCEDIT
GMRCGUIA   GMRCHL7    GMRCHL72   GMRCHL7A   GMRCHL7B   GMRCHL7U
GMRCSLM1   GMRCSLM2   GMRCU      GMRCUTIL   GMRCUTL1
```

■ **Re-enable journaling for the following globals:**

OR, OCXS, ORD, GMR, XTV, PS.

■ **Re-start TaskMan.** (Among other things, this will task the conversions.)

NOTE: ORMTIME is automatically scheduled once the Orders conversion is done. REQUEUE^ORMTIME is called from CLEANUP^OR3CONV1, which occurs when the conversion completes. Several notifications/alerts are triggered via ORMTIME. If ORMTIME is not running/queued, they will not be sent.

■ **Bring users back on the system.**

Run PSOPOST1 to see if the Outpatient Pharmacy conversion has finished.

To determine if the Outpatient Pharmacy V. 7.0 background conversion and backfill jobs have finished, do the following:

```
>D ^PSOPOST1
DEVICE: [Select Print Device]
Outpatient Pharmacy Background Job Status   JUN 26,1997   09:57:55   Page 1
------------------------------------------------------------------------
                              Site Name:  [site name]
Current Version Installed:   7.0

Background Conversion Job Started: DEC  31,  1997  13:12:05
                     Job Completed: JAN  01,  1998  03:15:52
```

If the JOB COMPLETED field does not have a date and time, the conversion is still running or it stopped abnormally. If it has stopped, check your system error trap for an error.

If the job stops abnormally and the error has been corrected, the following entry point may be called: D RESTART^PSOPOST. This will queue the Outpatient Pharmacy version V. 7.0 background conversion to rerun.

■ **Inpatient Pharmacy conversion**

If the Inpatient Pharmacy conversion job stops abnormally and the error has been corrected, the following entry point may be called: D ^PSJIPST. This will queue the Inpatient Medications V. 5.0 background conversions to rerun.

■ **Run STATUS^OR3CONV1 to check the status of the orders conversion.**

Several entry points can be called while the orders conversion is running—to stop, restart, or check the status of the conversion.

STATUS^OR3CONV1 gives the status of the conversion, including a status of the background process according to TaskMan. This status message varies, depending on the stage the conversion is.

STATUS^OR3CONV1 message example:

```
D STATUS^OR3CONV1

    So far orders for 3000 patients have been converted.
      There are currently 15,000 patients left to process.
```

When the conversion is complete, one of the following mail messages is sent:

Successful completion

```
Subject:  OE/RR version 3.0 conversion complete
  The orders conversion has completed
  The conversion was first started:  Jun 08, 1997@09:30
  It ran to completion:               Jun 10, 1997@07:42
```

Unsuccessful completion
(if it gets to the end of the conversion and still finds patient orders that could not be converted).

```
Subject:  OE/RR version 3.0 conversion encountered problem
A problem was encountered in the OE/RR conversion. After going through all
patients, it was still unable to convert orders for some patients.  Please
contact the national customer support help desk for further assistance.
```

The conversion utilities to stop or restart the conversion are: STOP^OR3CONV1 and RESTART^OR3CONV1.
We recommend that you NOT stop the conversion unless you will be taking your system down.

■ **(CMOP sites) Post-installation steps.**

+ **Important:** The Post-Installation tasks for CMOP must be completed AFTER the Outpatient Pharmacy Background Job Status displays the date and time. Obtain this information by running the PSOPOST1 routine as described previously in the Post-Installation section titled **"Run PSOPOST1 to see if the Outpatient Pharmacy conversion has finished."**

Step 1 – Restart CMOP tasks
The resource device entry, PSX, must now be cleared to allow CMOP tasks to run as scheduled. FREE the RESOURCE file (#3.54) entry for PSX as shown in the example below.

Example Step 1:
```
Select Systems Manager Menu Option: FM  VA FileMan
        VA FileMan Version 21.0

Select VA FileMan Option: Enter or Edit File Entries
INPUT TO WHAT FILE: RESOURCE// <Enter>
EDIT WHICH FIELD: ALL// SLOTS IN USE      (multiple)
   EDIT WHICH SLOTS IN USE SUB-FIELD: ALL// <Enter>
THEN EDIT FIELD: AVAILABLE SLOTS
THEN EDIT FIELD: <Enter>
Select RESOURCE NAME: PSX
Select SLOT IN USE: 1// 1
  SLOT IN USE: 1// @
   SURE YOU WANT TO DELETE THE ENTIRE '1' SLOT IN USE? Y  (Yes)
Select SLOT IN USE: <Enter>
AVAILABLE SLOTS: 0// 1
```

Step 2 – Activate CMOP Processing
Use the *Activate/Inactivate CMOP Processing* [PSXR ACTIVATE] option from the *CMOP Site Manager Menu* [PSXR CMOP MANAGER] to activate CMOP processing as illustrated in the following example.

Example Step 2:

```
Select CMOP Site Manager Menu Option: ACTivate/Inactivate CMOP Processing
Enter CMOP System:      LEAVENWORTH          INACTIVE

Enter mailman domain:  CMOP-LEAV.MED.VA.GOV//  <Enter>

                   CMOP SYSTEM STATUS

LEAVENWORTH   (INACTIVE)     No current transmission
CMOP Domain                : CMOP-LEAV.MED.VA.GOV
Last Batch Transmitted     : 338
CMOP RX Queue purged       : SEP 19,1997@08:41:14
Auto Transmission setup    : NO

Are you sure you want to activate the LEAVENWORTH system? NO// YES

Request to activate sent to LEAVENWORTH.
======================================
```

Step 3 – Reschedule Automatic Transmissions

Reschedule Automatic Transmissions to begin when Outpatient Pharmacy has resumed normal operations. This is accomplished using the *Setup Auto-transmission* [PSXR AUTO TRANSMIT] option as shown in the following example.

Example Step 3:

```
Select CMOP Site Manager Menu Option: Transmission Menu
Select Transmission Menu Option: Setup Auto-transmission
Enter the date to start automatic processing:   NOW// <Enter>  JAN 08, 1998@6:00
 Number of days to transmit thru:  (0-10): 0// 1
Enter rescheduling frequency (hours) for transmission:  (1-96): 24
Begin Automatic Transmissions      :  SEP 8,1997@09:29
Rescheduling Frequency             :  24 hours
Number of days to transmit through  :  1

Is this correct? NO// YES
```

This example has set up automatic transmissions to begin on the selected date and time. The PSX Resource Device is free and normal Consolidated Mail Outpatient Pharmacy operations may resume.

■ **Review and assign sequence numbers to protocols in the DGPM Movement Events field of the Protocol file.**

All the package protocols in the ITEM field of the DGPM Movement Events Protocol of the PROTOCOL file (#101) must be sequenced before the OR protocols.

Most of the necessary movement event protocols are automatically assigned during the CPRS installation. Make sure the following CPRS protocols are in the DGPM Movement Events field, in a sequence similar to the following:

ITEM:	DGOERR NOTE	SEQUENCE: 13 (*this should have the lowest sequence #)*
ITEM:	FHWMAS	SEQUENCE: 14
ITEM:	LR70 MOVEMENT EVENT	SEQUENCE: 15
ITEM:	OCX ORDER CHECK PATIENT MOVE	SEQUENCE: 16
ITEM:	PSJ OR PAT ADT	SEQUENCE: 19
ITEM:	ORU AUTOLIST	SEQUENCE: 21
ITEM:	ORU PATIENT MOVMT	SEQUENCE: 100
ITEM:	OR GUA EVENT PROCESSOR NOTASK	SEQUENCE: 999

Example: Entering a protocol sequence # for DGPM MOVEMENT EVENTS

```
Select OPTION: ENTER OR EDIT FILE ENTRIES
INPUT TO WHAT FILE: OPTION// 101  PROTOCOL    (3374 entries)
 EDIT WHICH FIELD: ALL// ITEM
   EDIT WHICH ITEM SUB-FIELD: ALL// <Enter>
 THEN EDIT FIELD: <Enter>
Select PROTOCOL NAME: DGPM MOVEMENT EVENTS           MOVEMENT EVENTS v 5.0
Select ITEM: DGOERR NOTE
   ITEM: DGOERR NOTE// <Enter>
   MNEMONIC: <Enter>
   SEQUENCE: 69// 13   [This # should be less than all OR* item sequences]
   MODIFYING ACTION:^
 Select ITEM: <Enter>
```

■ **Set up Imaging Nature of Order.**

After CPRS is installed, Radiology/Nuclear Medicine ADPACs will need to assign a CPRS code to each reason in the NATURE OF ORDER ACTIVITY field in File #75.2. These will determine whether or not a chart copy will be printed, whether an electronic signature is needed, and whether this action should be printed on the CPRS summary, for order hold and cancel reasons. The *Reason Edit* [RA REASON EDIT] option has been modified to allow editing of this new field if CPRS is installed. See the *Imaging Technical Manual* for further information.

■ **Set up the CPRS Graphic User Interface (GUI).**

Required Files:

CPRSChart1.0.exe	CPRS executable
CPRS.hlp	CPRS help file
CPRS.cnt	CPRS help contents file
HOSTS	should reside on the client already

Steps for setting up the CPRS GUI

1. Assign OR CPRS GUICHART as a secondary menu item to anyone who will be using the GUI.

2. Make sure servers are listed in the HOSTS file. If necessary, modify the HOSTS file of each client (PC) to set the appropriate mappings between names and IP addresses. The HOSTS file is located as follows:

Version of Windows OS	File (Location and Name)
Windows 95	C:\WINDOWS\HOSTS
Windows NT 3.51	C:\WINDOWS\SYSTEM32\DRIVERS\ETC\HOSTS
Windows NT 4.0	C:\WINNT\SYSTEM32\DRIVERS\ETC\HOSTS

Example of a Windows 95 HOSTS file

```
# Copyright (c) 1994 Microsoft Corp.
#
# This is a sample HOSTS file used by Microsoft TCP/IP for Chicago
#
# This file contains the mappings of IP addresses to host names. Each
# entry should be kept on an individual line. The IP address should
# be placed in the first column followed by the corresponding host name.
# The IP address and the host name should be separated by at least one
# space.
#
# Additionally, comments (such as these) may be inserted on individual
# lines or following the machine name denoted by a '#' symbol.
#
# For example:
#
#     102.54.94.97     rhino.acme.com          # source server
#      38.25.63.10     x.acme.com              # x client host
#
```

a. Move the cursor to the end of the last line displayed in the file.

b. Press the Enter Key to create a new line.

c. On the new line, enter the desired IP address beginning in the first column, as described in the example above. As recommended, add an appropriate IP address for the DHCPSERVER Host name as the next entry below 127.0.0.1.

d. After typing the IP address, type at least one space, and enter the Host name that corresponds to that IP address. As recommended, type in DHCPSERVER as the next entry below "loopback."
For example, the entry for a server at your site with an IP address of 192.1.1.1 would look like this:

```
127.0.0.1    localhost     # loopback  <---existing entry
192.1.1.1    DHCPSERVER    # cprs <---added entry
```

e. Repeat steps a - d until you have entered all of the IP addresses and corresponding Host names you wish to enter.

f. When your entries are complete, use Notepad's **File | Save** command to save the HOSTS file.

✛ NOTE: *Do not save the HOSTS file with an extension; delete the .sam!*

g. Close the HOSTS file.

✛ NOTE: The HOSTS file location on NT 4.0 Client is different from on WIN95. The CPRS executable attempts—using RPC Broker—to log in to the default DHCP server when CPRS executes. RPC Broker cannot find the HOSTS file, so it uses the default.

The best workaround is to create a shortcut to the CPRS executable on your PC:
- right click on the shortcut icon
- select "Properties"
- add s="your server name" p="your listener port" after the .exe command

For more information, see the *RPC Broker V.1.1 Systems Manual*.

3. Copy the file CPRSChart1.0.exe, CPRS.cnt, and CPRS.hlp to the workstations or put the files in a shared directory on the network. Rename CPRSChart1.0.exe to CPRSChart. (See Auto-Update instructions on the next page.)

4. **(optional)** If desired, you can either create a shortcut or an icon for CPRSChart or add it to the Start menu.

NOTE to VMS sites: We recommend that you modify the $I to use whatever scratch directory your site has set up to store all HFS files.

Auto-Update Program – CPRSUpdate.exe

To help sites ensure that their version of the CPRS GUI and the associated Help files on local workstations are synchronized with the latest released or test versions, developers created the CPRSUpdate.exe tool. CPRSUpdate.exe serves two purposes:

- Setting the values (parameters) in the registry that are required for the updates
- Performing the copy functions when an update is in progress

Note: Sites are not required to use CPRSUpdate.exe, especially if they use a different method of distributing software, such as Systems Management Server (SMS) or some other method.

Where Does CPRSUpate.exe Reside?

CPRSUpdate.exe should reside either in the gold directory on the server as described below or in the same directory on the local or network machine as CPRSChart.exe (the CPRS GUI application).

How Does CPRSUpdate.exe Work?

CPRSUpdate.exe normally does not run unless called by CPRS. When the user launches the CPRS GUI, it checks the date of the CPRSChart.exe, cprs.hlp, and cprs.cnt files in the gold directory.

- If the file dates match, CPRSUpate.exe is not called and CPRS runs as normal.
- If the file dates are different, CPRS calls CPRSUpdate.exe and shuts itself down. CPRSUpdate.exe copies the new versions of the files to the workstation, launches the new version of CPRS, and then closes itself.

CPRSUpdate.exe Options

Users can configure CPRSUpdate.exe to set the registry values interactively or non-interactively. CPRSUpdate.exe uses the following command-line parameters, which are discussed in greater detail below:

- GOLD (required for automatic updates)
- ONLY
- AUTO (required for automatic updates)
- ASK
- SHOW (interactive vs. non-interactive setting of registry values)

GOLD=remote directory path

GOLD defines the path to the directory where the copy of CPRS that matches the current server version (sometimes called the gold copy) is located. Remember to put double quote marks around directory names that include spaces if you enter the path on the command line. In the GUI dialog, the quotes are not necessary. CPRS looks for CPRSUpdate.exe in the gold directory first. If it is not there, it will check in the same directory where the CPRSChart.exe is located. If it is not in either of those two places, it will not attempt to update the executable.

ONLY=local directory path

If this registry value is present, the auto-update will only occur for CPRS executables that reside in the listed directory. This allows you to put executables that you do NOT want updated (like test versions) on the same machine but in different directories. Remember that double quote marks are required around directory names that include spaces on the command line.

AUTO=YES or NO

This registry value enables/disables the auto-update functionality. If AUTO=NO, no automatic updates will occur on the system regardless of other parameter settings. This is a way to disable automatic updates.

ASK=YES or NO

If ASK=YES, the user will be prompted before any updates occur. If ASK=NO, the update will occur without any user interaction.

SHOW

CPRSUpdate.exe can be used to set the registry values either from the command-line or from a GUI dialog. An example of setting this from the command-line might look like this:
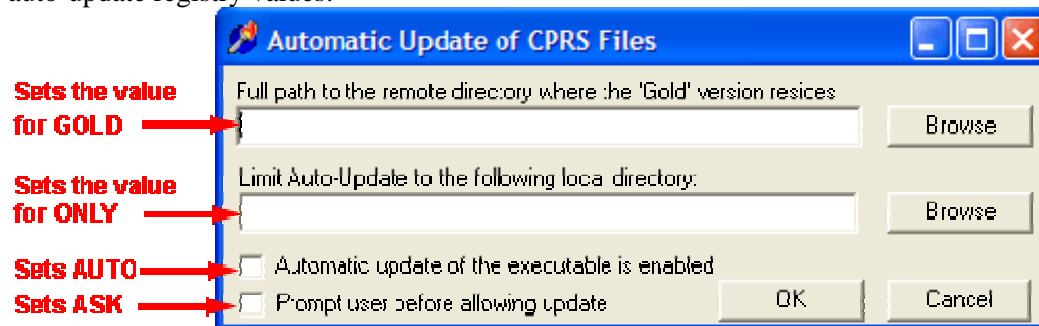

```
CPRSUpdate.exe GOLD="\\vamcserver\gold" ONLY="c:\program files\vista\cprs"
AUTO=YES ASK=NO
```

In the above example, the user would not see anything happen on the screen, but CPRSUpdate values would be set.

If the SHOW parameter is used, CPRSUpdate.exe will display a GUI dialog where the user can set the values. The SHOW parameter was created to lessen the chance that a user would accidentally run the interactive version and change the parameters. For example,

```
"C:\Program Files\vista\cprs\CPRSUpdate.exe" SHOW
```

will launch a small interactive program (GUI dialog) that will let the user view and change the auto-update registry values.

Remember that this is just set up. CPRSUpdate.exe copies the new files as these parameters dictate when it is called by CPRSChart.exe.

Using the auto-update functionality would likely involve the following steps (it may vary at your site) -

1. If your site does not have one, create a directory on a server where the "gold" copy of CPRSChart.exe, CPRS.hlp, and CPRS.cnt will be placed. This directory should be shared so that all the workstations have access to it.
2. Distribute CPRSUpdate.exe to the workstations or network server and place it in the same directory as CPRSChart.exe (generally C:\program files\vista\cprs). You may want to use SMS to do this.
3. Run CPRSUpdate.exe on each workstation with the command line parameters to setup the path to the gold copy. The GOLD and AUTO parameters must be set for the updates to work. ONLY and ASK are optional. You may also want to do this using SMS.
4. When the site installs the next version of CPRSChart.exe on the server, place the new executable file in the gold directory. When users access CPRS, they should be updated to the latest version automatically, depending on the registry settings.

The registry values are kept in:
HKEY_LOCAL_MACHINE\Software\Vista\CPRS

Release Notes

OE/RR 3.0 Enhancements since 12/97 Release

(In Released and Unreleased patch builds)

- Modifications have been made to process medication order checks based on type (inpatient, outpatient.) This allows determination between inpatient and outpatient med orders when looking for duplicate drugs and drug classes. Order check messages for duplicate drug and duplicate drug class are sent only if the drug being ordered is in the same order display group as the existing (duplicate) drug/class. Inpatient meds can be duplicates against other inpatient meds. Outpatient meds can be duplicates against other outpatient meds.

- An order date/time to consult orders was added to allow order checking for duplicate consult orders. This consult order date/time occurs within order checking processes only and is not stored with the consult order.

- Orderable items can be set up to have an Orderable Item Duplicate Order Range value of zero. This tells the order checking system to not perform duplicate order checks for the orderable item. To prevent duplicate order order checks for an orderable item, set the duplicate order range for that orderable item to zero. Do this via the Order Check Mgmt menu (Clin Coord), option *Orderable Item Duplicate Order Range*. For most instances, select the System level. Enter the orderable item, then 0 (zero) as the hours value. Note: users will see the duplicate order message for orders flagged prior to setting the hours value.

- For duplicate lab order check messages, the status now displays COLLECTED vs. COMPLETE and UNCOLLECTED vs. PENDING.

- The follow-up action for *Order Requires Electronic Signature* notifications varies, depending upon the user's privileges. If the user has the ORES key, but is not linked to the patient via OE/RR teams, nor as attending or inpatient primary provider, the follow-up action will check all unsigned orders for the patient. If the most recent unsigned action on any order was requested/entered by the user, the alert won't be deleted; e.g. if the user still has an unsigned action on one or more of the patient's orders. If none of the unsigned orders' most recent actions is credited to the user, the alert is deleted for that user only; i.e. the user has no unsigned actions for the patient's orders. This process was improved to use the unsigned action for each order to determine who was responsible for the order's unsigned status. Previously, the provider who originally requested the order was used. This caused incorrect user comparisons when a non-original ordering provider DCed an order without electronically signing the DC action.

- The default action on the List Manager Orders screen is now "Next Screen" until viewing the final page of orders when it will change to "Sign All Orders".

Enchancements, cont'd

- After signing and/or releasing a lab order, the lab order number is now displayed. The parameter "Show Lab #" used to turn this functionality on or off for ORES key holders in OE/RR 2.5 will also be restored in this patch.

- Orders that do not require a signature can now be released via the 'Sign' action with the other orders.

- The RV Review New Orders action now includes all unsigned orders for the current patient every time, regardless of which ordering session the orders were placed in.

- When placing a new diet order, the user is prompted to cancel any future diet orders that exist for the patient. The status of those orders is checked and the program will not prompt if they have already been cancelled.

- When placing a new tubefeeding order, the current tubefeeding order for the patient is displayed if one exists.

- A late tray for a new diet order that missed the mealtime cutoff had incorrectly required an additional step to sign and/or release the order, after the diet order itself had been released; the order for the late tray will now be released with the diet order. Also, checks have been added to ensure that the tray time selected has not passed, and NPO orders that incorrectly prompted for a late tray will no longer do so.

- When discontinuing orders that have not been signed and released to the service, ORELSE and OREMAS users had been prompted for the requesting provider and a reason for dc; these prompts have been moved to later in the dc action, as unreleased orders are simply deleted from the Orders file.

- Releasing orders without a physician's signature will now require ORELSE key holders to enter an electronic signature code as well. If the nature of order selected is "policy," then the order is considered to be signed and the current user becomes the requesting provider, otherwise the designated provider will still receive an alert to sign the order as usual. Also, a parameter has been created to determine the default signature action for ORELSE users.

- The Inactive Date field in the New Person file (#200) will now be checked to screen out inactive users at the Requesting Provider prompt. Also, inactive locations are now screened out at the Patient Location prompt, and inpatient locations will no longer be selectable for patients who are not currently admitted.

Enchancements, cont'd

- The default action on the Review New Orders screen (RV) was "Sign All Orders." A parameter from OE/RR 2.5 has been reinstated that allows the default action to be changed to "Sign & Release," which will prompt the user for the orders that are to be signed and/or released instead of assuming all orders. This parameter may be changed via the *Miscellaneous Parameters* option on the CPRS Configuration (Clin Coord) menu.

- When using the *Enter/edit generic orders* option and answering YES to the prompt "Do you wish to copy an existing one?," the software assumed the package to be Order Entry. It will now copy the package into the new order dialog to permit local customization of dialogs.
- A new option has been created to allow users to enter and edit action-type entries in the Order Dialog file. Also, the Entry and Exit Action fields may now be used with order sets.

- A new option has been created to allow users to search for a specified item and list the menus that it appears on. This option also prompts for a new item to automatically replace the current one on the listed menus, if desired.

- Before allowing an entry to be deleted from the Order Dialog file, a check will now be done to ensure that nothing is pointing to that item. If the item is in use, a message will be displayed and the deletion prevented.

- "Other Hospital Services" is now a choice at the "Type of Orderable" prompt.

- An output transform has been added to the Value field of the Response multiple in the Order Dialog file, so that standard FileMan displays and reports can display the external form of the value instead of the internal form.

- For the "Toggle Display" option, the editor will now redisplay the menu at the same screen; prior to this patch, the editor would always force the display back to the first screen of the menu.

- Users can now set up surrogates to receive their notifications (OE/RR alerts).

- The order summary report has been enhanced to print in a condensed format to get multiple patient reports on one page. This is controlled by a new parameter ORPF CONDENSED ORDER SUMMARY, that can be edited from the Summary Reports Parameter menu.

- Four new fields have been added to the Orders file (100) to help track the printing of chart copies.

- The Protocol ORS RX ACTION PROFILE is being exported in this patch with a new name to make it consistent with other places where this report is found. The new name text is *Outpatient RX Profile.*

Enchancements, cont'd

- A new parameter is being exported to allow a condensed version of the Order Summary reports, called ORPF CONDENSED ORDER SUMMARY. This parameter is being added to the ORP SUMMARY REPORTS parameter template, so it can be edited by the clinical coordinator from the Summary Report Parameters menu.

- Notifications are now exported as disabled (unless Mandatory).

- The messages displayed when using the option *Determine Recipients for a Notification* have been modified. The team (or personal list) type is now included in the display. The team type now appears in brackets "[<team type>]" after the team name.

- The *Task 24hr Order Summary by Location* [ORTASK 24HR SUMMARY] option is now using the parameter to sort the orders in forward date/time. Also a change was made in the routine that prints location header pages to keep the header page from over-flowing onto a second page.

- A parameter that allows a site to specify whether or not to dc generic orders on transfer, and if so on a specialty change or a ward location transfer has been added (with a default value of "specialty change"). This parameter value may be modified via the CPRS Configuration (Clin Coord) menu, *Miscellaneous Parameters* option.

- A parameter has been added to allow generic orders to be auto-discontinued on admission. The default will be to not auto-dc on admission to be backwards-compatible, but this value may be modified via the CPRS Configuration (Clin Coord) menu, *Miscellaneous Parameters* option.

- A parameter has been added to allow sites to define a cutoff time when delayed orders are to be considered "lapsed" instead of being released on an MAS patient event. This value will be the number of days to allow delayed orders to remain eligible for release, and may be modified via the CPRS Configuration (Clin Coord) menu, *Miscellaneous Parameters* option.

- An optional entry point in the post-init routine will loop through the Orders file and update the status of any generic order that has a past stop date, or a start date more than 90 days ago, and update the status of Allergy orders that have been placed more that 90 days ago to complete. This cleanup job may be tasked from programmer mode by D TASK^ORY24.

- The column header for the date displayed in the D/C Summary tab has been changed to "Ref Date" to match the "Reference Date" header used in TIU and to avoid the ambiguity of discharge vs transcription date.

Enchancements, cont'd

- The date displayed on the Notes tab showed the time instead of the year if the note was written within the past year; otherwise it showed the year instead of the time. This has been changed to always show both time and year. The Orders tab will also now include the year whenever possible in the start and stop date columns of the Long Format. For orders with both dates, the year will appear with the stop date.

- A "sort order by status" capability has now been applied to the Meds tab, for both Inpatient and Outpatient views. Orders with an active status (active, suspended, hold) will be grouped together at the top of the list, followed by pending orders (pending, non-verified) and non-active orders (expired, dc'd, dc'd due to edit). The Start Date has also been added to the Inpatient view, and the Change View (CV) option "Save as Preferred View" will now save the Inpatient vs Outpatient specification as well.

- The Verify action has been corrected to prevent users holding the OREMAS from verifying problems.

- Comments may now be viewed on the Problems tab via a new option under Change View (CV). This is a toggle that will simply turn on or off the display of the comments with each problem in the list.

- The case number has been added to the display for each exam listed on the Imaging Tab.

- The Recent Orders view on the Orders tab (via CV/Status) has been corrected to match the Daily Order Summary.

- The Orders Tab will now show the provider who signed the order instead of the original requestor of the order, if they are different users.

- The Verify action for users holding either the ORELSE or OREMAS key has now become a sub-menu containing the old Verify action (here renamed "Acknowledge") and a new "Chart Review" action. Another column has been added to the far right of the Orders tab labeled "Chart" to display the user's initials who reviewed the order via this new action.

Consults Enhancements

- The menu of actions for service update users on the Consults tab of CPRS will be updated to match the text and mnemonics used in the Consults package options; this includes the addition of two more actions to the CPRS menu: Results Display and Significant Findings.

- The default urgency for consult and procedure orders will now always be Routine; the Order Dialog file entries GMRCOR CONSULT and GMRCOR REQUEST are updated in this patch to accomplish this.

- A new prompt for "Service" has been added to the Procedures ordering dialog. If only one service is available to select from, that value will be stuffed in and the user will not be prompted.

- A new free text field has been added to the Consult ordering dialog to support Consult Types. This field will only be presented while placing orders using one of these quick orders, and this text will now be sent to the Consults package as part of the order. Any existing Consult Type quick orders may now be edited via the Order Menu Management options to populate this new field with the desired text.

GUI Enhancements

The most current information about the CPRS GUI can be found at:
http://vista.med.va.gov/cprs

OR*3.0*10 v12

NEW FUNCTIONALITY

Added full-SSN lookup to patient selection screen. Input can be with or without hyphens, and can include a 'P' as the last character. (NOIS PUG-1098-51396, BAN-0599-11138, and BIR-0599-30797 and E3R 11969)

Added the ability to save of view preferences on Problems, Consults, Notes, and Discharge Summary tabs.

Ordering:

It is now possible to use the "Copy to New Order" action to copy orders to a delayed event. When copying meds, the order is converted to the appropriate pharmacy package. For example, when an inpatient med is transferred to a discharge event, it is converted to an outpatient med order.

'Transfer to Inpatient" and "Transfer to Outpatient" are now available actions on the meds tab (in addition to copy to delayed event).

Menus are now recognized within order sets. When a menu is displayed within an order set, the menu window is displayed and the "Done" button changes to "Next." Pressing this button will exit the menu and continue with the order set.

Order sets are now interruptible. When an order set is activated, another window is displayed that represents the items in the order set. As each item is processed, it is checked off. The set may be interrupted by pressing the stop button in this window.

Version 12 Patch 10, cont'd

The ORWDPS ROUTING DEFAULT may now be set to "no default." This will make it so the first outpatient med order entered in a session has no default value for Pickup. Subsequent orders will default to what was initially selected.

Size and position information is now recorded for order dialogs. So if you resize an ordering dialog, that size is used the next time it is activated.

The complete action is now available for all users with ordering keys.

Lab order dialog:

Added processing of server environment variables. This includes support for LRFZX, LRFURG, LRFSPEC, LRFSAMP, LRFSCH, and LRFDATE. These variables need to be defined in the entry action of the Add Orders menu on which the items appear. (PUG-0399-50419)

TIU Templates:

TIU boilerplate templates have been added to the Notes, Consults and Discharge Summary tabs. These tabs now have an "Options" menu that will allow the user to "Edit Templates" or "Create New Template". Clinical Coordinators will also have "Edit Shared Templates" and "Create New Shared Template" menu options. When text is selected, a right-click menu option will "Copy into New Template." All these options enter the template editor, which allows for the modification of existing templates, the creation of new templates, and the organizing of templates into a hierarchical structure.

All users are allowed to build their own personal list of templates, which is automatically created the first time they enter the template editor. Initially called "My Templates," this list can contain templates copied from the shared list, or can contain customized templates built by the user. The TIU*1.0*76 post install routine will initialize Shared Templates to contain a TIU Objects folder, and an inactive Boilerplate Titles folder, based on current active titles. Clinical Coordinators have an extra check box available in the template editor, called "Edit Shared Templates." When checked, editing of the shared template list is allowed, as well as access to the inactive Boilerplate Titles folder (when the Hide Inactive check box is not checked).

Templates can be arranged into folders or groups. A folder is similar to a directory of computer files. A group is like a folder, except that the group can be added to a note as a single template, allowing for all templates within its hierarchy to be included in its boilerplate.

Version 12 Patch 10, cont'd

When editing a document, a new "Templates drawer" appears that, when selected, will reveal a tree view of available templates. These templates can be dragged into the note, or double-clicked, and the corresponding expanded boilerplate text will be added to the note. A right-click menu allows for a preview of the template's contents, as well as templates searching capabilities.

Encounter Form:

The encounter form has added the ability to change the primary provider and add secondary providers to an encounter. The selection box for providers is located on the "Visit Type" tab and will open an additional window when the "Update" button is pressed. From this window you may add or delete providers and designate the primary.

Problem List:

The operation of filters and problem list display has been changed to more closely match that in the List Manager Problem List package. On the filters screen, selectable services/clinics now include a shortlist of those existing in the patient's current list, followed by all those on file and active at the site. Selecting Inpatient or Outpatient as the view preference will still display the same number and list of problems based on any filters in effect, but will now show different columns of information about those same problems. Display of comments can now be turned on or off, as well.

BUG FIXES

Allergy order dialog:

The display of top ten site symptoms on allergy dialog has been corrected. The display is now limited to the first ten items in the Allergy Site Parameters file.

Consults:

The editing of consult service and procedure on those ordering dialogs when presented via a quick order, edit, or copy action has been disabled (also on the Edit/Resubmit screens). (WRJ-0399-10783, PUG-1198-51875)

We've changed Edit/Resubmit of cancelled consult so that while processing a notification, other cancelled consults cannot be selected and resubmitted. The procedure resubmit form has been corrected so that it correctly closes after resubmitting the consult. Both of these problems were discovered in testing.

Version 12 Patch 10, cont'd

Urgency and Place of Consultation are now correctly being enforced as required fields in ordering, forwarding, or editing/resubmitting a consult or procedure.

When ordering a consult, if a grouper service is selected via the service combo box, the informational message about selecting a grouper was not displaying. In v12, the message will display, and when the tree-view button is clicked, the grouper will be highlighted and expanded to show its subservices. (ATG-0599-31709)
An "Edit/Resubmit" button has been added to the main consults form. It will only be visible when processing a cancelled consult alert. (PUG-0299-51901)

Problem List:

Corrected editing of existing problems so that correct service/clinic combo box is now displayed.

Fixed check for adding of duplicate problem. This had originally worked, but was broken by the addition of comments to the list display. (BIL-0499-31339)

Corrected list of exposures on detailed display, so that the actual entries of exposures are now shown instead of just the number of exposure types. Discovered in testing.

Corrected saving of problem so that problem names with embedded quotes are now accepted without error. (MAD-0599-41830)

If no user problem lists are defined for the user, and lexicon search is enabled at the site, the lexicon dialog will appear immediately on selecting the 'New Problem' action, instead of requiring a second click on the 'Other' button. (LON-0599-61882)

Ordering:

In the outpatient med dialog, route and schedule should now default to what they have been set to in the pharmacy orderable item file.

The service-connected prompt should now be enabled/disabled appropriately.

The ordering actions on the meds tab are now disabled if the user has no ordering keys.

Ordering menus should now calculate the number of columns in the menu correctly.

It is now possible to create personal quick orders when an order dialog is activated from within the ordering menus.

Version 12 Patch 10, cont'd

Lab order dialog:

Corrected to not allow collection TYPES other than those remaining in the combo box for the selected test. (LON-0399-61834)

Corrected validation of lab collect times >7 days in the future for inpatients. This had been subtracting FileMan dates and returning a number >7 when crossing an end-of-month boundary. (BAY-0399-33248)

Corrected the collection type precedence so it is now as follows (but also depending on whether there is a lab collection sample for the test): (IND-0499-40692)

- quick order definition
- LRFZX value of menu
- default type for location (LR DEFAULT QUICK ORDER)
- patient status

Corrected so that "How often" defaults to "ONE TIME" and is not prompted for unless the value of the parameter "LR MAX DAYS CONTINUOUS ORDERS" has a value greater than "0" for the location.

Corrected so that if there is no default specimen for the sample, and no value is set for variable LRFSPEC in the menu entry action, the specimen selection defaults to "Other...," and the list of the topography file automatically pops up when the specimen combo box is entered. (WRJ-0499-11423)

After the ACCEPT button is clicked, the selected test combo box will now be reset so that no test or quick order remains selected.

Radiology ordering dialog:

Imaging location is no longer required, and this box will not default to a value unless there is only one location defined for the imaging type selected. (BIL-0399-32796)

Changed list of available modifiers to display in alphabetical order.

When the exam category does not match the encounter location type, an ordering location is prompted for on clicking the ACCEPT button. With v12, the list of locations presented will be only those matching the exam category. This should reduce the number of orders rejected by the radiology package. (PUG-1298-52434, AMA-0599-70531)

Corrected handling and validation of Request Date so that quick orders with relative dates should now work correctly. (HUN-0499-21971)

Version 12 Patch 10, cont'd

Corrected problem when PREOP prompt in order dialog [RA OERR EXAM] was set to "ASK ON EDIT ONLY = NO." Interactive code was then being executed, hanging the GUI. This should now work correctly. (ASH-0499-32066)

The "History/Reason for Exam" box will now require at least two consecutive alphanumeric characters before the order will be accepted. This will be consistent with both CPRS List Manager and the Radiology package. (PUG-0699-50527)

Notifications:

Corrected processing of "Imaging Request Held" alerts, which were not being handled correctly. Discovered in testing.

Excluded alerts not of type 'OR' or 'TIU' from being returned to the GUI for processing. (IND-0499-41707) Screened out Network Health Exchange alerts from being displayed in the GUI. Changed processing of TIU alerts so that upload filing error alerts are displayed in the GUI, but the user is instructed to process these via List Manager. (SFC-0499-62250)

Corrected handling of INFO ONLY alerts to look at the TAG^ROUTINE of the followup action instead of the action flag field of file 100.9. This is in response to some changes that were made by patch OR*3*31.

Corrected processing of unsigned order alerts, so that they should now be getting reevaluated and cleaned up after a signature or DC action.

If a progress note was begun while processing an alert, and the NEXT ALERT button pressed before signature, the user was correctly prompted for a signature before the next alert changed patients. The signed note was then incorrectly assigned to the second patient instead of the first. (SHE-0599-51494)

Uploaded consult completion documents that produced an alert could not be edited or signed from the consults tab. While this is more a TIU upload issue than a GUI malfunction issue, the menu-enabling code has been changed to allow processing of these alerts from the consults tab. However, if the consult in question is selected outside of the context of processing the alert, the note will not show up as being linked to the consult. This will require a TIU patch to correct the linking of the document to the consult on upload. (MON-0499-52242)

The Edit/Resubmit menu item on the Consults tab was not enabled for all recipients of the "Cancelled Consult" notification. This has now been corrected.

Version 12 Patch 10, cont'd

Identify Additional Signers:

Corrected "List Index Out of bounds" error when changing cosigner via "Identify Additional Signers" action. Discovered in testing.

If the user removed the current cosigner from the cosigner combo box, and closed the form with no cosigner specified, the cosigner for the document was being stored as the character "0." The new behavior will remove the current cosigner from the document while retaining the requirement that a cosigner be specified before the author is allowed to sign.

Vital Entry Window:

The tab order of the items in the window is now the same order the items appear on the form. (PUG-0399-51842)

Encounter Form:

Values entered into the Vitals tab will no longer disappear if another tab is selected. (PUG-0399-51842)

Corrected index out-of-bounds error when trying to delete an education topic and the location does not have a defined AICS form. (WPB-0399-32811, LIT-0499-73084, LOM-0599-60380)

Notes:

If there are multiple TIU titles associated with an encounter, the encounter will not be deleted when the note is deleted. Former versions of the CPRS GUI deleted all encounters associated with a note when a note was deleted.

Spelling and grammar checking have been added to the Notes, Consults, and Discharge Summary tabs. If Microsoft Word is installed on the workstation, these items will appear on the right-click popup menu while entering/editing a note. Optional custom dictionaries of medical terms have also been provided.

Corrected electronic signature entry screens so that if an incorrect signature is entered, the signature box becomes focused and selected, allowing retyping of the signature without first deleting or backspacing over the incorrect entry. (HUN-0199-20767)

Corrected Notes, Consults, and Discharge summary tabs so that VISIT DATE object should now be correctly resolved in boilerplated text. (WPB-0498-30070)

Version 12 Patch 10, cont'd

Corrected a problem with cosigner persisting between documents if the first document required a cosigner and the next did not. The user was never prompted, but the prior cosigner was saved in the second document nonetheless. This was occurring on the Notes and Consults tabs.

Corrected a problem on the Notes, Discharge Summary, and Consults tabs where an incorrect cosigner could be selected/entered, and a menu item clicked, thus bypassing the validity check on the cosigner entry. The note could then be signed with an incorrect cosigner specified. (SFC-0398-62567, HUN-0598-22312)

Corrected Notes, Consults, and D/C Summary so that when a provider edits a note created by a student, signs it, and then selects a new note (or Consult or D/C Summary), the default Author entry is reset to the provider, not the student. (HUN-0499-21568 and CTX-0499-71389)

Cover Sheet:

The window showing appointments and admissions will now also show unscheduled visits. (NOIS JAC-0499-70254, ANC-0499-51532, and NHM-0599-12322)

Patient Selection:

Changed lookup by specialty to disallow lookup of inactive specialties. (NOIS MWV-0599-21105)

Changed lookup by provider to disallow selection of terminated providers. (NOIS OKL-0399-71563)

Reports Tab:

Imaging reports will now display the case number and exam date. (NOIS SHE-0699-50618 and NOIS WPB-0998-30888)

The display of imaging reports will be based on list manager preferences (user defined, if available, or default of 10 exams or 5 year date range). Parameters used will display. (NOIS LON-0399-62219)

Version 12 Patch 10, cont'd

OR*3.0*10 v11

New functionality in v11

Ordering

- Event delayed (admit, transfer, discharge) orders may now be entered. This is accomplished by selecting the event for which you wish to enter delayed orders from the Order Sheet list box on the left upper side of the orders screen. You may also use the items in the Order Sheets list to view event delayed orders that have already been written.

- A new parameter will allow you to suppress the display of mnemonics on ordering menus. The parameter is ORWDXM ORDER MENU STYLE. The default is to show the mnemonics.

Graphs

- Zoom feature added to Lab Worksheet.

- Graphs on worksheet and vitals will retain a zoomed date range when viewing other results in the list.

- Points are graphed so that they do not fit exactly against an axis - the margin is slightly inflated.

- Date/Time axis can display a label on increments down to one minute.

- Date range selection added to Lab tab and the Vitals form.

- Right click on graphs have actions for Values, 3D, Enable Zoom, Zoom Back, Copy, and Details.

- Details are enabled when right clicking on a point on the graph or the graph legend. Details on the legend provide a detailed report for all test values within the date range of the graph. Details on a point provide all results (any vitals or lab results) for that particular day. Details are also displayed by simply clicking on the legend or on any point on the graph.

Printing

- Added printing of orders on signature/release in cases where the orders are not auto-printed.

- The File | Print actions on the Orders tab has also been implemented.

Vitals

- The Vital entry form now includes a place for entering the pain scale.

Reports

- When configuring the health summaries that display on the reports tab, you may now use fractional numbers as the sequence number.

CPRSUpdate

- CPRSUpdate has been recompiled with Delphi 4 (as has CPRSChart). This should allow the registry to be opened read-only and accessed with a lower level of privilege. The latest CPRSUpdate.exe is available in the Salt Lake City BETA directory.

- Note that when the updates run, the current version of CPRSChart (v10) will still be accessing the registry in read/write mode. So you may not see a difference in behavior until this version (v11) needs to be updated.

Patch 10 v11 bug fixes

- Changed Allergy ordering dialog so that the site's top ten symptoms are presented at the top of the symptoms list, as defined in the Allergy Site Parameters file (120.84).

- Changed main form so that the CWAD indicator is updated when an allergy is added to a patient who did not previously have one.

- Corrected a problem in the Lab order dialog where, if a personal quick order was selected and the ACCEPT button clicked, the user was not correctly returned to the list of quick orders, but was instead left down the list at the orderable item contained in that quick order. (WPB-1198-31615)

- Corrected a sporadic access violation on initialization of the lab order dialog when certain tests were selected.

- Corrected some miscellaneous filtering problems on the Problems tab.

GUI Enhancements, cont'd

- Corrected a problem on the Radiology order dialog related to patient status and ordering category not matching (inpatient/outpatient). This was partially fixed in v10, but the selected location was not being correctly recorded in the order. (PUG-1298-52434, SHE-0299-50666)

- Corrected a problem in the Consults and Procedures dialogs that was causing the dialogs to display partially off the right side of the screen when the user was in 640x480 mode. This error was introduced by v10b when the 'Reason for Request' field was widened to prevent incorrect word wrap.

- The forms have been rearranged to maximize the size of the 'Reason' box, the treeview has been hidden, and a button has been added to make the treeview drop down and be usable if the button is clicked.(PUG-0299-51180, LOM-0299-60729)

- Fixed problem on Lab results list on cover sheet, where orders with non-integer IENs (e.g., 123456.7;1) would not display results when clicked.

- Changed "OTHER" selection in Lab Collection Time list to "FUTURE". Also added a check to prevent ordering 'LAB COLLECT' times for INPATIENTS more than one week in the future. This is now consistent with List Manager. (DAY-0299-40917)

- Corrected a problem on the reports tab with the processing of Imaging notifications. Recent changes to the upper list box contents caused the previous functionality to stop working.

- Added code to Notes tab to ensure the list of consults on the Consults tab gets updated on signature of a progress note completing a consult.

- Corrected Problem List tab so that the check for a clinical user is determined by the presence of the ORES or ORELSE keys, rather than by the absence of the OREMAS key.

- The Consults and Procedures ordering dialogs now check for the presence of the variables GMRCNOAT and GMRCNOPD, and disable the Attention and Provisional Diagnosis entry boxes if these variables are greater than zero, as defined in the entry action of the ordering menu. This setting affects all quick orders on the menu where it is set.

- Added code to Notes tab to ensure the service connected encounter questions are answered when TIU indicates this requirement. The same code was also added to the Consults tab. (HUN-0199-22223)

GUI Enhancements, cont'd

- Added code to the notes tab so all titles marked by TIU to prompt for workload will provide a prompt before signing. The same code was also added to the Consults tab. (SHE-0199-51122, HIN-1198-40606, HIN-1198-40606)

- Added code disabling encounters for future dates. (HUN-0199-20762)

- The orders tab should now display orders the same as list manager. Previously, there were differences in the way the two dealt with context hours and filtered outpatient meds while the patient was an inpatient.

- There should no longer be a server error when long text strings are pasted into the progress notes title box.

- Renewing medications now checks to make sure the provider is authorized to write med orders.

Patch 10 v10

New Functionality in v10

Quick Orders

The mechanism for handling quick orders has been changed substantially. When a quick order is selected, the default and condition actions are now executed, as with the LM interface. This should fix some problems where fields didn't get set properly and will more accurately determine if an interactive dialog needs to be presented.

It is VERY IMPORTANT, if you have added any executable code to the condition or default fields, that they be checked to make sure they don t require user interaction. The exported order dialogs have been checked. The fields that are executed are (in the ITEMS multiple):

```
ASK ON CONDITION (101.412, 13)
DEFAULT        (101.412, 17)
```

In particular, it is important that these fields not do any READs that could get into a loop when the null device is the current device. (WRITEs and READs that don't re-prompt are not as big a problem, since the null device is used).

GUI Enhancements, cont'd

When a quick order is selected, if a field needs to be answered, the ordering dialog will be presented. If there is no need for input, and VERIFY ORDER is true, an Accept / Edit / Cancel dialog (similar to LM) will appear. If VERIFY ORDER is false, the order will simply be entered. This means the auto-accept flag at this point just determines whether the auto-accept indicator appears on the menu. If auto-accept is set, and the default and condition code indicates a need for input, the ordering dialog will still appear.

The entry actions for menus and quick orders are now parsed to see if values have been set for key variables that control order prompting (the variables used since OE/RR 2.5). In particular, the actions are parsed for the variables LRFZX, LFRSAMP, LRFSPEC, LFRDATE, LRFURG, LFRSCH, PSJNOPC, GMRCNOPD, GMRCNOAT, and GRMCREAF. If these variables are found, they are set as they would be with the LM interface.

Ordering

- The actions on the meds tab have now been implemented.

- Mnemonics will now display on the ordering menus.

- An ordering dialog for Allergies has been added.

Consults

- Added Edit/Resubmit followup action for alerts regarding cancelled Consults and Procedures.

- Changed Enabled property of Consults tab ordering buttons/menus to reflect the state of [ORWOR WRITE ORDERS LIST] for the user. If User.No Ordering is true, then all are disabled. Otherwise, they correspond to the presence or absence of the particular ordering dialog for the user. The Add New Orders menu will still allow ordering, if present.

- Added combo box for selection of Consult service to Order Dialog, Forward, View by Service, Custom List, and Edit/Resubmit actions. Changed display of consults list to match the new format used in List Manager.

Printing
- Printing has been enabled for the Reports Tab. This functionality will allow printing of reports using printer devices defined on Server.

- Printing has been enabled for the Labs Tab. This functionality will allow printing of Lab reports using printer devices defined on Server. Some of the reports on this tab contain window graphics and cannot be printed to printers on the server. These are the Worksheet, Graph, and Most Recent displays.

- The device selection window, used in the Consults, Notes, Labs and Reports tabs, now does similar screening on devices found in Kernel s Device Handler. Screening now includes:
  - 'P'rinter subtypes
  - Device Types of HG and TRM allowed
  - Queuing allowed
  - Out of Service
  - Prohibited times
  - Security checks

General
- Added context-sensitive help at the tab level.

- Added double-click event handler to notifications list box, to allow processing of a single alert by double-clicking.

- The Lab Status report has been added to the Labs Tab.

- The user is now warned when a deceased patient is selected.

Patch 10 v10 BUG FIXES

- Corrected a problem where notes created for patients who had been interward-transferred were still picking up and storing the original ward as the note location. (STX-1098-71924)

- Added display of Admission and Discharge dates to Discharge Summary tab.(PUG-0998-51778, and test site call request)

- Widened Consults and Procedures order dialogs slightly to accommodate the full width of List Manager-entered text in the Reason for Request memo box and prevent unwanted word wrap. (PUG-1198-52546)

GUI Enhancements, cont'd

- Corrected a problem with the Collection Times box on the Lab Order Dialog screen. If a quick order left that field blank, the combo box was initializing as empty until a collection type was reselected. (DAY-1198-42472) Also changed the label to read "Collection Date/Time", per Washington request on test site call of 12/2/98.

- Corrected a problem in all 5 of the Consults service Treeviews, where if a grouper service was added under a grouper service, but also appeared elsewhere in the tree, all of its children would appear doubled in both places. (PUG-0798-51923)

- Fixed an error at ORDERS+4^ORCXPND1 that could only have been occurring in the processing of Site-flagged or Order-flagged Results alerts or displaying lab results from the cover sheet. (DAY-1198-42111)

- Changed logic for retrieval of orderable procedures to check for both an inactivation date in the Orderable Items file and a DISABLED entry in the Protocol file, and whether a Consults service is defined that can perform each procedure. Only procedures that are active in all three places will be displayed for selection. (HUN-0898-20422, PAL-1098-61762)

- Changed alert processing logic so that unsigned order alerts are deleted when there are no more unsigned orders for the patient. (SHE-1098-52598)

- Corrected error on Problem List tab, where the current Problem List User Parameters were getting set based on Encounter.Provider instead of User.DUZ. (PUG-0798-51948)

- On patient selection screen, if any alerts were selected and the 'Process Info' button clicked, the selected alerts would be processed in addition to the informational alerts. Corrected.

- Changed color of 'Previous Tests' box on Radiology dialog to display correctly regardless of the user's color scheme.

- Changed Radiology order dialog to preserve the contents of the REASON box both when a different procedure is selected and on accepting an order and reinitializing the dialog. (WPB-1298-30758)

- Corrected M error in Radiology order dialog related to retrieval of APPROVAL requirement for a radiology procedure. (POP-1298-41460)

GUI Enhancements, cont'd

- Added code to check for a zero Display Group value on clicking the Imaging Type selection box. If zero, procedure exits without error. This should prevent an intermittent error on some systems reported by Denver and Huntington. (DEN-1198-51849, HUN-1298-20562)

- Corrected a problem on the Lab order dialog where Collection Sample was not being correctly prompted when only one collection sample was defined, even though it was not a UNIQUE collection sample. (IND-1298-41218)

- Corrected a problem on the Lab order dialog where selecting same orderable item twice in sequence failed to populate, allow selection from, or enable the collection sample or specimen combo boxes. (PRO-1298-10967)

- Corrected the radiology order dialog so that text in the 'History and Reason for Exam' box automatically wraps at 74 characters.

- Added keyboard control-key shortcuts to the Consults tab for 'Significant Findings' and 'Administrative Complete' actions. Changed several other existing shortcuts on the 'Tracking' menu to eliminate duplicates already present.

- Corrected problem on Radiology order dialog where an inpatient procedure could not be ordered for a current outpatient, and vice versa. Added a new prompt for Ordering Location in these circumstances. (PUG-1298-52434)

- Corrected a problem in the processing of TIU notifications on the Consults tab, where no consult was found to be associated with the alert. (SHE-0199-50142)

- Corrected the order that vitals are entered to provide consistency with the list manager interface. (PUG-1098-52654)

- Corrected an error with the "Add to PL." check box, on the diagnoses page of the encounter form, not remaining checked for the associated item. (WPB-1298-30757)

- Corrected an error with the problem list items, on the diagnoses page of the encounter form, not being reloaded when the patient changes and the clinic does not. (WPB-1198-31958)

- The problem list items on the diagnoses page of the encounter form have been moved to the top of the list. (WPB-1198-31749)

- When displaying the Lab cumulative, a limitation has been imposed because of restrictions in previous versions of Delphi. This limitation is no longer necessary, and has been removed. (PUG-1298-50885)

GUI Enhancements, cont'd

- When a nurse releases orders, electronic signature is now prompted.

- When a med student enters an order, the notifications should now fire.

- The disabled flag is now checked for each quick order, ordering menu, and order dialog.

- Orders that are only a few pixels high (and thus unreadable) should no longer appear on the Orders tab.

- An order may no longer be verified twice.

- The IV Fluids dialog should no longer inappropriately reject some infusion rates.

- The values for routing and refills in an outpatient med quick order should no longer be overwritten.

Patch 10 v10b

The following changes are in the 10b executable:

- Corrected hanging of Consults and Procedures order dialogs when information was missing and the Accept button was clicked. Error message now correctly displays ON TOP of the dialog instead of behind it.

- Corrected extreme slowness problem on building of consults service tree for large sites. Additional speed should be achievable by defining the services hierarchically in file 123.5 rather than placing 300 services under ALL SERVICES.

- Corrected cover sheet so that Allergy list and Postings list are correctly updated when a new allergy is entered and the order signed, either from the Review screen or from the Orders tab menus. CWAD indicator updating will be included in v11. (ALB-0199-51747)

- Corrected Problems tab so that the initially highlighted problem when displaying the tab is actually selected and appropriate menus are active. (ALB-0199-51747)

- Corrected Problems tab so that (u)nverified status indicator is visible to ALL users, but only clinical users are still allowed to actually verify the problem. (PUG-0798-51948)

GUI Enhancements, cont'd

- Corrected bug in the grid component on the Problems tab that was preventing filtering from working correctly. View/Filters should now correctly select problems by clinic, service, provider, and inpatient/outpatient status. (WPB-1098-30159)

- Changed Problems tab so that ENTERED BY will be set to the current user, and RECORDED BY will be set to the selected encounter provider. Previously, ENTERED BY was being set to the selected encounter provider.

- Changed behavior of memo boxes on Notes, Consults, and Discharge Summary tabs to allow use of the tab key within the note.

Patch 10v9

- Order Checking has been implemented.

- Order sets are now supported when selected from an orders menu. When an order set is selected, the system iterates through each order, as with list manager. If there is user interaction required, a dialog is displayed. Otherwise, the order is simply placed. At this point in time, if the order set contains a menu, the menu is skipped. There needs to be a considerable amount of additional work if menus are to be accessed from within an order set.

- New orders now always go to the top of the Orders screen when placed. At the point they are signed, they get reshuffled into their various categories. Since new orders now always appear at the top of the orders list, the small box at the bottom of the ordering menu has been removed. It was only there to provide feedback that an order was actually placed when there was no interactive dialog. This was problematic for order sets, so it seemed better to consistently have the feedback on the orders sheet itself.

- The Lab ordering dialog has been enhanced to include a prompt for collection type, including Immediate Collect, if available at the ordering location. Collection sample and specimen selection has also been enhanced to include "Other" in appropriate circumstances.

- The Problem List tab now includes the display of active comments for any problems, where they are present.

- The encounter button on the progress notes tab is enabled for outpatient clinics. This enabled capture of encounters for inpatients assigned to an outpatient clinic.

- Problem list items are now selectable from the diagnoses tab on the encounter form.

Bug Fixes

- Corrected Problem List tab so that current category of problems is redisplayed when switching to another tab and back again. (WPB-0998-31907)

- Corrected another problem list error of original provider being recorded as the source of comment actions. (PUG-0998-52376)

- Added display of active comments to Problems tab for problems that have had comments added. (WPB-0398-31730)

- Wrapped text in 'Reason for Request' field of Consults and Procedures order dialogs at 74 characters. (WPB-1098-30158, WPB-1098-30857)

- Corrected problem where clerks were able to verify unverified problems under certain circumstances. (PUG-0998-52377)

- Fixed a problem where a value of '0' was being passed in to a function that returned information about a Consult IEN. UNDEF was the result. (LIT-0998-72059)

- Fixed a situation where a clinic's list of problem categories was not being returned on entry of new encounter information. (HUN-0898-20848)

- Corrected a problem where the ICD9 code was not being correctly returned/stored when a problem was selected from a user's common problem list. (WPB-1098-30709)

- Corrected tab order on the "Receive a Consult" screen. (WPB-1098-30856)

- Added the selection of multiple statuses to the consults list by status and custom list, both on the View menu. (PUG-1098-52071)

- Added logic to the Lab Ordering Dialog to respect the location's defined value for parameter "LR DEFAULT TYPE QUICK" when first opening the dialog. (IND-1098-42170)

- The value of POS was showing up in lab results displays. This was happening after a test was selected that had a Print Code associated with it. (PUG-0998-51770)

- Corrected updating to Most Recent lab report (WPB-0798-30392)

- Properly displays Most Recent and All Tests lab reports when chem and micro samples have the same exact collection time (WPB-0898-31674, BAY-1098-31866)

GUI Enhancements, cont'd

- Corrected passing a zero as a provider when a diagnosis was selected from the encounter form, using the "other button (EKH-1098-41755, DAY-0898-41009, CIN-0898-40916, SHE-0798-52204).

- A provider is no longer required to enter vitals (SHE-0698-51955).

Previous GUI Patches

- The ability to enter Skin Tests, Immunizations, Health Factors, Patient Education, and Exams from the Encounter Form while entering a new Progress Note has been added.

- The Reports Tab has been enhanced to include:
  - Summary of Patient Procedures report from the Medicine package.
  - The same Anatomic Path report that is used in the ListMan interface.
  - Daily Order Summary
  - Order Summary for a Date Range
  - Chart Copy Summary
  - Outpatient RX Profile

- It is now possible to process notifications that have follow-up actions. Notifications are selected from the Patient Selection window. Pressing the Process button will navigate the user to the proper location in the chart where action on the selected notification may be taken. The notification being processed is displayed in the status bar at the bottom. The Next button, displayed alongside it, will take the user to the next selected notification. While processing a notification, all the other chart tabs are active and may be used.

- Order dialogs for Consults, Diet, IV, Labs, Inpatient and Outpatient Meds, Procedures, Radiology, Text Only, and Vitals are available.

- Vitals can also be ordered from the Cover Sheet.

- The Consults, Notes, and Discharge Summary Tabs have been enhanced to include "Identify Additional Signers."

- The cover sheet can now load some of the boxes in the background. This is controlled by the parameter, ORWOR COVER RETRIEVAL. The exported behavior is to load Clinical Reminders, Lab Tests, and Appointments in the background. This can be modified locally.

GUI Enhancements, cont'd

- The GUI will timeout and close if there is no mouse or keyboard activity for DTIME. A parameter is available for setting the timeout used by the GUI. This timeout will not affect any applications except CPRSChart.exe. The parameter is named ORWOR TIMEOUT CHART. (It also needs to be edited using General Parameter Tools). It can be set at the site level or for individual users.

- Locking the patient when ordering has now been implemented. During the time that you have the lock on the patient, the word 'LOCK' is displayed in the status bar.

- The Discharge Summary tab is now implemented, and is very similar to the current Notes tab. Only one summary is allowed per admission. Incomplete summaries can be edited with appropriate user privileges. The attending is the required cosigner in all cases. Entry by a transcriptionist is not yet supported.

- Quick Orders are now available. An Add New Orders choice is available from the Write Orders box; this selection presents a screen of quick orders similar to the List Manager (and OE/RR 2.5) Add Order screen. Order menus like those used in the List Manager interface may now be used from the GUI. These menus are displayed in a navigation window, allowing the user to quickly traverse the menus. To use these menus from the GUI they need to be added so that they appear in the Write Orders listbox. This can be done by adding the menu(s) to the parameter, ORWOR WRITE ORDERS LIST, the same way an ordering dialog would be added. Alternatively, you can use a -new- parameter, ORWDX WRITE ORDERS LIST. This is a single valued parameter that points to entries of type MENU in the ORDER DIALOG file. The selected menu will be used to create the items in the listbox.

- The primary care team, primary care physician, and attending physician (in the case of inpatients) are now displayed in the header bar. Clicking on the area will display phone and pager numbers. There is also a place in the header bar for an indicator that CIRN data is available. This is disabled at present.

- When pasting into a progress note, the paste is now intercepted so that formatting information (font changes, bolding, etc.), which can't be stored on the M server, doesn't appear in the progress note.

- When a TIU document is deleted by a user authorized to do so, a reason for deletion is prompted if the progress note has been signed.

- Users without the provider key can now be selected as the encounter provider so that they can fill out encounter data. The provider key isn't checked until the user starts to place orders.

GUI Enhancements, cont'd

- The Problem List tab now requires entry of encounter information, if not already present, before any entry/update action can be taken on a problem.

- A new menu, Options, appears when the Orders tab is selected. The items on this menu manage quick orders. A user may, during the course of most ordering dialogs, choose to save the responses they have entered as a quick order. The quick orders a user has saved will then appear at the top of the initial listbox the next time the user clicks that dialog in the "Write Orders" list.

- Order sets can be set up for the GUI now.

- The ability to add an Encounter diagnosis to the Problem List is available now.

Appendix A: Define CONSULTS for TIU/CT Interface

Patch TIU*1.0*4 contains an option that allows you to set Consults up as part of the Document Definition hierarchy. The following is a description of the option and the other steps necessary for allowing Consults to be accessed through TIU and CPRS.

1. Select the option *Define Consults for TIU/CT Interface* and enter the relevant information.

```
Select OPTION NAME: TIU DEFINE CONSULTS      Define CONSULTS for
TIU/CT Interface
Define CONSULTS for TIU/CT Interface

I'm going to create a new Document Definition for CONSULTS now.

GREAT! A new Document Definition has been created for CONSULTS.
Next, you need to decide whether you want CONSULTS to be set up
as a separate CLASS (comparable to DISCHARGE SUMMARY or PROGRESS
NOTES), or whether you want CONSULTS defined as a DOCUMENT CLASS
under PROGRESS NOTES. The benefits of each strategy are outlined
in the POST-INSTALLATION instructions for this patch.

NOTE: If you're not yet CERTAIN which strategy you want your site
to adopt, then quit here, and get consensus first (it's easier to
get permission than forgiveness, in this case)!

     Select one of the following:

          CL        Class
          DC        Document Class

Define CONSULTS as a CLASS or DOCUMENT CLASS: DC  Document Class

Okay, you've indicated that you want to make CONSULTS a Document Class.

 Okay to continue? NO// YES

FANTASTIC! Your NEW DOCUMENT CLASS CONSULTS will now be added under
the PROGRESS NOTES Class...

Okay, I'm done...Please finish your implementation of CONSULTS by adding
any Titles as appropriate using the Create Document Definitions Option
under the TIUF DOCUMENT DEFINITION MGR Menu, as described in Step #3 of
the Post-Installation Instructions.

Press RETURN to continue...
```

Consults Setup, cont'd

2. You can verify that the upload header is appropriately defined for Consults using the option [TIU UPLOAD HELP]. The output will look something like this:

```
<Message Header Signal>:           CONSULTS
TITLE:                             CARDIOLOGY CONSULT
SSN:                               666-12-1234
VISIT/EVENT DATE:                  5/00/97@08:00
AUTHOR:                            CPRSPROVIDER,TWO
TRANSCRIBER:                       K5420
DATE/TIME OF DICTATION:            5/13/97@11:00
LOCATION:                          MEDICAL-CONSULT 6200
EXPECTED COSIGNER:                 CPRSPROVIDER,ONE
CONSULT REQUEST NUMBER:            1455
<Begin Text Signal>
 CONSULTS Text
```

- File should be ASCII with width no greater than 80 columns.
- Use "@@@" for "BLANKS" (word or phrase in dictation that isn't understood), where <Message Header Signal> and <Begin Text Signal> will appear as you've defined them in your Upload Parameters for your site (e.g., $HDR and $TXT, etc.).

3. Use the *Create Document Definitions* option [TIUFC CREATE DDEFS MGR], under the IRM Maintenance Menu option [TIU IRM MAINTENANCE MENU], to construct a new document definition sub-tree for Consults that looks something like this:

```
Edit Document Definitions      Sep 00, 1997 11:59:04      Page:    1 of   1
BASICS
        Name                                                          Type
  1      CLINICAL DOCUMENTS                                            CL
  2       +DISCHARGE SUMMARY                                           CL
  3       +PROGRESS NOTES                                              CL
  4         CONSULTS                                                   DC
  5           MEDICINE CONSULTS                                        DC
  6             MEDICINE CONSULT                                       TL
  7             ENDOSCOPY                                              TL
  8           CARDIOLOGY CONSULTS                                      DC
  9             CARDIOLOGY COSULT                                      TL
 10             ELECTROCARDOGRAM                                       TL
 11             ECHOCARDIOGRAM INTERPRETATION                         TL
 12       +ADDENDUM                                                    DC
  ?Help    >ScrollRight    PS/PL PrintScrn/List    +/-            >>>
   Expand/Collapse      Detailed Display/Edit    Items: Seq Mnem MenuTxt
   Jump to Document Def  Status...                Delete
   Boilerplate Text     Name/Owner/PrintName...  Copy/Move
Select Action: Quit//
```

Consults Setup, cont'd

The example above suggests a Service-oriented set of Document Classes with one or more titles under each. Of course, just like Progress Notes, these can include boilerplate text with embedded objects. It will probably take some time, with substantial cooperation between your Clinical Coordinator, IRMS, and the Consulting Services, to develop a complete set of Document Definitions for Consults at your site.

4. Next, define a set of Document Parameters for the new Consults class, using the Document Parameter Edit [TIU DOCUMENT PARAMETER EDIT] option under the TIU IRM MAINTENANCE MENU option, as follows:

```
   1      TIU Parameters Menu ...
   2      Document Definitions (Manager) ...
   3      User Class Management ...

Select TIU Maintenance Menu Option: 1  TIU Parameters Menu

   1      Basic TIU Parameters
   2      Modify Upload Parameters
   3      Document Parameter Edit
   4      Progress Notes Batch Print Locations
   5      Division - Progress Notes Print Params

Select TIU Parameters Menu Option: DOCument Parameter Edit

First edit Institution-wide parameters:

Select DOCUMENT DEFINITION: CONSULTS          DOCUMENT CLASS
        ...OK? Yes// <Enter>  (Yes)

DOCUMENT DEFINITION: CONSULTS// <Enter>
REQUIRE RELEASE: n      NO
REQUIRE MAS VERIFICATION: u     UPLOAD ONLY
REQUIRE AUTHOR TO SIGN: y     YES
ROUTINE PRINT EVENT(S): <Enter>
STAT PRINT EVENT(S): <Enter>
MANUAL PRINT AFTER ENTRY: y     YES
ALLOW CHART PRINT OUTSIDE MAS: y     YES
ALLOW >1 RECORDS PER VISIT: n     NO
ENABLE IRT INTERFACE: <Enter>
SUPPRESS DX/CPT ON NEW VISIT: <Enter>
EDITOR SET-UP CODE: <Enter>

If document is to be uploaded, specify Filing Alert Recipients:

Select FILING ERROR ALERT RECIPIENTS:

Now enter the USER CLASSES for which cosignature will be require

Select USERS REQUIRING COSIGNATURE: STUDENT//
Now enter the DIVISIONAL parameters:

Select DIVISION: [optional...you probably won't need to set up
auto-printing devices]

Press RETURN to continue...
```

Identify local recipients as appropriate.

Identify per local requirement

Consults Setup, cont'd

5. Finally, use the option to Manage Business Rules, under the User Class Management
   Menu to specify the following rules, allowing Linking (or re-linking) of TIU
   documents with "requests" in a client application:

```
1   An UNSIGNED (CLASS) CLINICAL DOCUMENT may be LINKED by An AUTHOR/DICTATOR

2    An UNCOSIGNED (CLASS) CLINICAL DOCUMENT may be LINKED by An EXPECTED
    COSIGNER

3    A COMPLETED (CLASS) CLINICAL DOCUMENT may be LINKED by A CHIEF, MIS

4    An UNSIGNED (CLASS) CLINICAL DOCUMENT may be LINKED by A MEDICAL
    RECORDS TECHNICIAN
```

Appendix B: CPRS Hardware & Software Requirements and Recommendations

The following information contains recommendations for workstations, servers, and cabling plants. These recommendations are for requirements beyond the basic upgrading of the facility's main computer cluster to the newer DEC Alpha systems to provide the additional capacity needed to run CPRS and related packages (e.g. TIU, PCMM, PDM),

VHA facilities are encouraged to budget and purchase PC workstations as replacements for dumb terminals. The VHA LAN and Workstation Requirements task force report should be used too as a guide.

NOTE: The List Manager interface, non-GUI version, of CPRS does not require a PC workstation.

Workstation Hardware
CPRS does not have specific workstation requirements beyond the VA Standard Desktop Configurations. Please see the following web page:
http://vaww.vairm.vaco.va.gov/vadesktop/

Local Area Networks

Server hardware (non *VISTA* servers)
For simplicity of support, facilities should consider purchasing the same type of hardware used for the *VISTA* servers. These systems would both run the recommended server NOS (network operating system) of Microsoft Windows NT. General features to be considered include:

- Single processor system with capacity to expand to multi-processor
- RAID magnetic disk drive configurations for critical applications
- Backup device
- Fast disk controller (SCSI-2)
- Uninterruptible power supply (UPS) with shutdown software
- Modems for RAS and system access by support personnel

Server software
- Microsoft Windows NT 3.5x or 4.x. Microsoft Windows NT has been selected as the recommended server NOS (network operating system) for non- *VISTA* applications within VHA
- Electronic mail: Microsoft Exchange Enterprise Version.
- *VISTA* Request Broker on *VISTA* servers
- CD ROM resources: Network versions of medical reference sources such as Physicians Data Reference

- Optional workstation management software, e.g. SMS

LAN naming conventions
LAN naming conventions are important as we maximize the benefit from our installed systems. The best trade-offs need to be made to ensure that the results are user friendly, compatible with evolving computer networking technology, and compatible with other VA organizations. Conventions are needed for objects such as user names, domains, servers, shared directories, post offices, printers, printer queues, groups, workstation computer names, login scripts, and shared resource names (FAX, modem pools, CD ROM towers). It is possible that these conventions will need to change over time. The VHA NT naming conventions documents can be found on the internal VA Intranet server under medical automation, at link *h ttp://152.128.2. 7/mediauto/domain7. doc.*

LAN architecture
The VHA Office of the Chief Information Officer (OCIO) has developed the VHA LAN Architecture for use as guidance in the implementation of a scaleable, open local area network (LAN) architecture at VHA facilities.

The key assumption underlying the design of the recommended architecture is reflected in the 1992 VHA report, DHCP Facility Data Communications Cabling Recommendations and Implementation Strategies *(http://vaww. va.gov/tss/ datanetd/ttf1992, doc). The* network backbone is a fiber optic implementation and the horizontal wiring is realized using three four-pair unshielded twisted pair (UTP) category 5 cables to the workspace. Three corresponding architectures were recommended in support of the three business cases.

The crux of the recommended VAMC architecture is LAN switching realized with Ethernet, FDDI, and ultimately, ATM technologies. The augmented recommended architecture includes an alternative architecture for VA facilities with conservative demands and limited economic resources.

Facility wiring/cabling
Facility wiring and cabling recommendations are outlined in the 1992 VHA report DHCP Facility Data Communications Cabling Recommendations and Implementation Strategies *(http://vaww.va.gov/tss/ datanetd/tt£1992, doc),* released to the field in January 1992.

Facility-wide connectivity would include a multi-mode fiber optic backbone to all wiring locations, and category 5 unshielded twisted pair (UTP) wiring to all work/user locations. Such a cabling scheme is anticipated to support any future recommendation for a LAN architecture. The VII Telecommunications Infrastructure Project (TIP) is currently underway aimed at helping sites upgrade to the appropriate cabling and LAN architecture.
