Table of Contents

This page intentionally left blank for double-side printing.

1. Introduction

The Vitals/Measurements application is designed to store in the patient's electronic medical record all vital signs and various measurements associated with a patient's hospital stay or outpatient clinic visit. Data can be accessed by several V*IST*A (Veterans Health Information Systems and Technology Architecture) applications (e.g., CPRS, Health Summary) that interface with the Vitals/Measurements application.

Functionality[1]

- Contains a GUI (Graphical User Interface) to make editing and viewing of data easier. Additional information on GUI software is contained at the end of this chapter.

- Supports documentation of a patient's vital signs (e.g., temperature, pulse, and respiration).

- Tracks a patient's height, weight, central venous pressure (CVP), circumference/girth and oxygen saturation via oximetry with supplemental oxygen information.

- Supports documentation of detailed or positional blood pressures for a patient (i.e., bilateral blood pressures taken in a sitting, standing and lying position).

- Associates qualifiers (alpha characters appended to the measurement's numeric value) to provide a more detailed description of the patient's vitals/measurements.

- Contains detailed help windows to assist users in associating appropriate qualifiers with the patient vitals/measurements.

- Prints temperature, height, and weight in both metric equivalents and U.S. customary units.

- Prints patient's cumulative measurements on the Vitals Signs Record and the Cumulative Vitals Report.

- Displays latest information on all of the patient's vitals/measurements in both metric equivalents and U.S. customary units (when appropriate) along with the date/time the information was obtained.

---

[1] Patch GMRV*5.0*23 September 2009 Updated Functionality list, including the removal of support for archive/purge functionality.

- The displays include the patient's intake and output when present in the patient's database (refer to the Intake and Output application).

- Allows facilities to establish hospital-wide high and low values for each vital sign or measurement.

- Identifies abnormal patient values on vitals/measurements reports (those values outside the high and low range).

- Displays graphic reports on workstation monitors.

- Provides APIs so other VistA applications can send or receive patient data.

- Records a reason for the omission of a patient's vitals/measurements.

- Supports an interface to vital signs monitor connected to the workstation.

Information on GUI software

Internet WWW Documentation
Documentation for this product (including user manual, technical manual and package security guide, release notes, and installation guide) is available on the Internet (World Wide Web) from the VHA Software Document Library (VDL) <http://www.va.gov/vdl/>:

[1]http://vista.med.va.gov/clinicalspecialties/vitals/index.asp

GUI and Windows
GUI stands for Graphical User Interface, most frequently seen as the Windows screen. If you have already used programs with these screens, then the Vitals GUI screen will seem familiar to you. The Vitals GUI is only implemented on the Microsoft Windows platform at this time.

If you have little or no familiarity with Windows, you can browse through the Windows help file for information about the basics of using Windows. Also, see the next few paragraphs for brief descriptions of some GUI features.

To access the Windows Help File, click the Start button in the taskbar and click Help. Use this help file as a reference whenever you have general questions about Windows.

The following is an example of what a GUI screen looks like (Fig. 1-1):

---

[1] Patch GMRV*5.0*23 September 2009 Redirected documentation links to VDL instead of intranet.
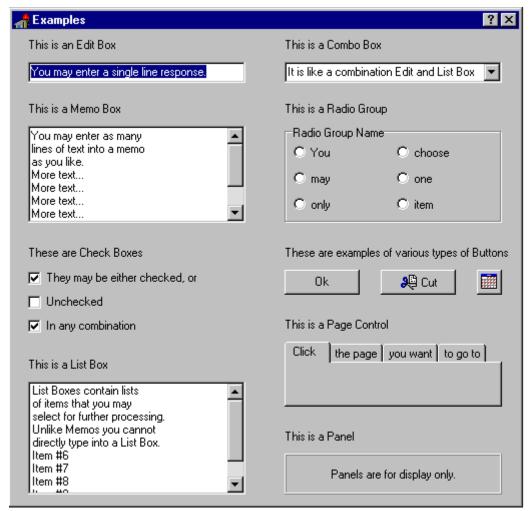

Fig. 1-1

Windows
An "application window" is the area on your computer screen used by a program. If you have more than one program running at the same time, you can go from one program to another by clicking in each application window. The currently active window contains a colored bar (usually blue) at the top of the window. An inactive window contains a gray bar at the top of the window. You can also move, close, or minimize the application window to make room for another window. (See Help in Windows for further instructions on these functions.)
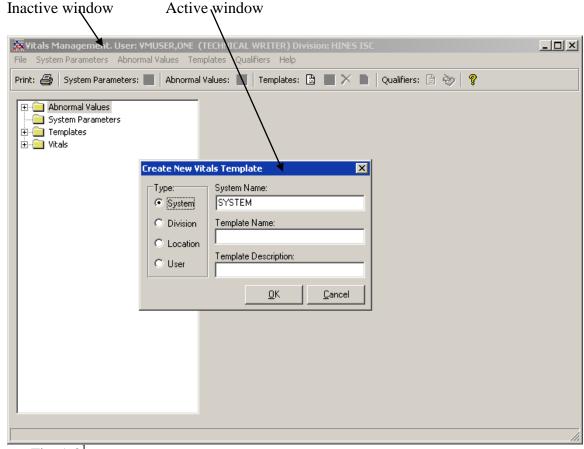

Inactive window   Active window

Fig. 1-2[1]

Pop-up Windows
These are "mini" windows that pop up within a window to provide or request information.
Usually they require some action before they will go away. Clicking on buttons with the
words <Cancel>, <Exit>, or something similar closes these windows.

Menus
Menus are shown in the gray bar near the top of the window. Some examples of menus are:
File, Edit, Reports, and Help — typical menus for most Windows applications. When you
click on one of these, a list of options is displayed.

Help
Online help and documentation are available in several formats: hints, context-sensitive help,
menu help, and Internet Web documentation.

---

[1] Patch GMRV*5.0*23 September 2009 Updated screen capture.

Hints
Place the cursor over a specific button, and a pop-up box will appear containing a short description of that button.

Context-Sensitive Help
Use the "F1" key at any time to obtain help on the current screen.

Menu Help
Select the Help Menu at the top of the screen. A Table of Contents opens. Choose one of the contents, or type in a topic you want help on. A screen appears containing help about that subject.

Access Keys
Use access keys to quickly get to an option through the pull-down menus by holding down the Alt key and pressing the underlined letter of the desired pull-down menu, then (still holding down the Alt key) press the underlined letter of the desired option.

This page intentionally left blank for double-side printing.

2.   Implementation and Maintenance

Description

This chapter provides guidelines for implementing the Vitals/Measurements application. It is important to complete all of the steps contained in this chapter before assigning menu options to clinical staff.

Virgin Installation of Software

The following steps should be followed when the Vitals/Measurements software is installed in an environment where no previous installation of the Vitals/Measurements application has taken place.

1. Setting up the software environment.

Information Resource Management Services (IRMS) staff should install the software using the Installation Guide in a test environment prior to installing the software in the production (VAH) account. The following V*IST*A packages should reside in the environment where the Vitals/Measurements application is to be installed:

> a. VA FileMan V. 22 or greater,
> b. Kernel V. 8.0 or greater,
> c. Kernel Toolkit V. 7.3 or greater,
> d. Kernel RPC Broker V. 1.1 or greater,
> e. PIMS V. 5.3 or greater,
> f. Intake and Output V. 4.0,
> g   Health Summary V. 2.7 or greater,
> h. Nursing V. 4.0 or greater.

Data entered into the test environment CANNOT be transferred into the production environment. It is recommended that a limited amount of data be entered into the test directory in order for the user to become familiar with the application and to establish an acceptable training database.

2. Name spacing and file listing.

Vitals/Measurements is found in the GMV namespace. All routines, templates and options begin with GMV. File numbers are in the range of 120.5 to 120.57 and are stored in the ^GMR and ^GMRD globals.

3. Editing site configurable files.

Site configurable files can be edited through the Vitals Manager module.

4. Queuing TaskMan jobs.

No queued TaskMan jobs are associated with this application.

5. [1]Accessing modules.

The Vitals application, i.e., the Vitals and Vitals Manager modules are accessed separately through the GUI executable icons on the user's desktop. The Vitals module is assigned to the clinical staff so they can use the Vitals application, and the Vitals Manager module is assigned to the Clinical Application Coordinator, package coordinator, and Information Resource Management Service (IRMS) staff so they can use the Vitals Manager application to manage the Vitals templates and abnormal values.

6. Assigning modules.

The Vitals Manager module should be assigned to Clinical Application Coordinator, package coordinator, and Information Resource Management Service (IRMS) staff.
The Vitals module should be assigned to clinical staff.

7. Security keys.

There is one security key in this application, it is GMV MANAGER. This new key allows a user to view/create/edit all other user's templates in the Vitals Manager module, without this key the user can only view/create/edit his/her own user templates. This key also allows a user to use (run) other user's templates in the Vitals application. This key should be assigned to the package coordinator.

8. Printer issues.

Users may print some reports on Client (Windows) printers and other reports on V*IST*A (device file) printers.

9. On-line Help.

Throughout the application, on-line help is available when questions arise. The user can click on the Help button or menu at the top of the screen to see a table of contents and index containing help on how to enter data, print reports, etc..

---

[1] Patch GMRV*5.0*23 September 2009 Items 5 and 8 were modified.

Non-Virgin Installation of Software

Follow steps 1 through 9 above when installing the software in an environment where a previous version of the application has been installed.

[1]Implementation Considerations

Some sites prefer to delay implementation of the software until they have a point of care data entry system, but this software can be implemented without a point of care system. Vital sign entry can be accomplished by ancillary service personnel, (e.g., PIMS, Dietetics, Pharmacy). Interested users of this software are encouraged to form a committee to work cooperatively on the implementation and training of the package. Setting up test wards is a good way to begin a cooperative implementation effort. The Vitals/Measurements module is appropriate for all personnel who obtain and record patient vitals/measurements. Conceivably this module could be used by nursing, dietetics, medicine, and other disciplines as appropriate.

---

[1] Patch GMRV*5.0*23 September 2009 Second paragraph removed.

Resource Requirements

The minimal hardware requirements for the software are two data input devices (usually PC workstations running Windows 9x or NT (Ver. 4 or later)) and one printer per location. 12 megabytes of available memory is needed to run the program. The following statistics regarding the disk storage requirements of the software were compiled by an average test site.

Server Requirements

Globals	Type of Data	Size
DDs	Data Dictionaries	40 k
GMR	Patient data for the Text Generator, Vitals/Measurements, Intake and Output, Adverse Reaction Tracking and Consult/ Request Tracking Modules	25-75 k/ patient
GMRD	Static data for the Text Generator, Vitals/Measurements and Intake and Output Modules	10 k depending on the global efficiency

[1]Client Requirements

The client (disk) storage requirements are approximately:

Type of Data	Size
Vitals.exe	1900 k
VitalsManager.exe	1200 k
GMV_VitalsViewEnter.dll	1500 k
VITALS.HLP	41 k
VITALSMANAGER.HLP	22 k
GMV_VitalsViewEnter.hlp	23 k

---

[1] Patch GMRV*5.0*23 September 2009 Client Requirements list updated.

5. Exported Options

Delphi Components

[1]Vitals/Measurements uses RPC Broker and VA FileMan Delphi Components in the display and navigation of screens. Vitals utilizes only the standard components as supplied with Delphi. Below is a list of the Delphi components this application currently uses along with a short description.

TeeChart	Displays charts and graphs. It is used in Vitals/Measurements to graphically plot various measurements versus time.
ResizerPanel	Resizes its client components when the form is resized or the screen resolution is changed. This takes care of proper size and position of components with regard to the font size used in Windows. It is there so users can resize the application Windows to meet their needs.
VersionInfoResource	Retrieves VERSIONINFO data from the executable. It is used in the about boxes in Vitals/Measurements to display version information.
RPCBroker	Used for all non-FTP communication with the server.
FMDC	Used for saving, deleting, validating, and retrieving data in FileMan data dictionaries.
DateTime	Allows the user to visually select a date and time. It is provided as an option on all date/time fields.
PatientSelectionFrame	Allows user to select a patient, by unit, team, ward, clinic or name. The frame is on a resize panel.
ReportFrame	Allows users to view patients vitals data and create a configurable graph of data.

Remote Procedure Calls (RPC)

```
NAME: GMV ADD VM                         TAG: EN1
  ROUTINE: GMVDCSAV                       RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: SUBSCRIPTION              INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 DESCRIPTION:
 This remote procedure call is used to enter a new Vital/Measurement record
 in the GMRV Vital Measurement file (#120.5).
```

---

[1] Patch GMRV*5.0*23 September 2009 Deleted Delphi version number.

[1]This remote procedure call is documented in Integration Agreement 3996.
INPUT PARAMETER: GMRVDATA   PARAMETER TYPE: LITERAL
 MAXIMUM DATA LENGTH: 255   REQUIRED: YES
 SEQUENCE NUMBER: 1
 DESCRIPTION:
 This variable contains the data needed to create a Vital/Measurement
 record in the GMRV Vital Measurement (#120.5) file. The values are parsed
 out of the GMRVDATA variable and filed.

 GMRVDATA has the following data:
  piece1^piece2^piece3^piece4^piece5

  where:
   piece1 = date/time in FileMan internal format
   piece2 = patient number from FILE 2 (i.e., DFN)
   piece3 = vital type, a semi-colon, the reading, a semi-colon, and
            oxygen flow rate and percentage values [optional] (e.g.,
            21;99;1 l/min 90%)
   piece4 = hospital location (FILE 44) pointer value
   piece5 = user number from FILE 200 (i.e., DUZ), an asterisk, and the
            qualifier (File 120.52) internal entry numbers separated by
            colons (e.g., 547*50:65)
 RETURN PARAMETER DESCRIPTION:
 RESULT does not return a value.

 The data is filed in the GMRV VITAL MEASUREMENT (#120.5) file.

 Example:

  > S GMRVDATA="3051011.1635^134^1;120/80;^67^87*2:38:50:75"
  > D EN1^GMVDCSAV(.RESULT,GMRVDATA)

NAME: **GMV ALLERGY**   TAG: ALLERGY
 ROUTINE: GMVUTL3   RETURN VALUE TYPE: ARRAY
 AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
 WORD WRAP ON: TRUE
 DESCRIPTION:
 This remote procedure call retrieves the patient's allergy information.

 This remote procedure call is documented in Integration Agreement 4350.
INPUT PARAMETER: DFN   PARAMETER TYPE: LITERAL
 MAXIMUM DATA LENGTH: 30   REQUIRED: YES
 SEQUENCE NUMBER: 1
 DESCRIPTION:
 DFN is a pointer to the PATIENT file (#2).
 RETURN PARAMETER DESCRIPTION:
 Returns the patient allergy information in the array specified.

  The result array returns:
   RESULT(n)=This patient has the following allergy(ies):
       (n+1)=piece1

   where piece1 = the allergy name
              n = sequential number starting at 1.

 If there is no data, then the following is returned:
  RESULT(1)=No Allergy Assessment

---

[1] April 2006 Patch GMRV*5.0*3 Updated the routine description.

```
Example:
> S DFN=134
> D ALLERGY^GMVUTL3(.RESULT,DFN) ZW RESULT
> RESULT(1)="This patient has the following allergy(ies): "
> RESULT(2)="PENICILLIN"
```

NAME: **GMV CHECK DEVICE**   TAG: CHKDEV
  ROUTINE: GMVUTL2   RETURN VALUE TYPE: ARRAY
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
[1]DESCRIPTION:
 This RPC calls a KERNEL utility to return a list of printers the user may
 select to print output. Returns a maximum of twenty entries.
INPUT PARAMETER: GMVIEN   PARAMETER TYPE: LITERAL
  REQUIRED: YES   SEQUENCE NUMBER: 1
 DESCRIPTION:
 The value to begin the search in the Device file (#3.5). Can be null.
INPUT PARAMETER: GMVDIR   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 1   REQUIRED: YES
  SEQUENCE NUMBER: 2
 DESCRIPTION:
 Direction of the search (1 = forward, -1 = backwards).
 If DIR is null, then set to 1.
INPUT PARAMETER: GMVRMAR   PARAMETER TYPE: LITERAL
  REQUIRED: YES   SEQUENCE NUMBER: 3
 DESCRIPTION:
 Right margin as a single number or range (e.g, 80, 132 or "80-132").
 RETURN PARAMETER DESCRIPTION:
 RESULT(n)=P1^P2^P3^P4^P5^P6

  where n = a sequential number starting with 1
     P1 = File 3.5 IEN
     P2 = File 3.5 name (.01 value)
     P3 = File 3.5 name (.01 value) or flag to indicate last entry in
        the array
     P4 = location of terminal
     P5 = right margin
     P6 = page length

NAME: **GMV CLINIC PT**   TAG: CLINPTS
  ROUTINE: GMVCLIN   RETURN VALUE TYPE: ARRAY
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 DESCRIPTION:
 This procedure lists patients who have an appointment for a selected
 clinic and a given period of time.
INPUT PARAMETER: CLIN   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 30   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 CLIN contains the name of the selected clinic from the Hospital Location
 file (#44).
INPUT PARAMETER: BDATE   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 30   REQUIRED: YES
  SEQUENCE NUMBER: 2
 DESCRIPTION:
 BDATE contains TODAY, TOMORROW, YESTERDAY, PAST WEEK or PAST MONTH.

---

[1] April 2006 Patch GMRV*5.0*3 Updated the routine description.

RETURN PARAMETER DESCRIPTION:
Returns a list of patient names and DFNs for the selected clinic and the
given date span in the array specified.

[1]NAME: **GMV CLOSEST READING**   TAG: CLOSEST
  ROUTINE: GMVGETD   RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
DESCRIPTION:
 This remote procedure call returns the observation date/time and reading
 of the record closest to the date/time specified for the patient and vital
 type.
INPUT PARAMETER: GMVDFN   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 12   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 A pointer to the Patient (#2) file (i.e., DFN).
INPUT PARAMETER: GMVDT   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 14   REQUIRED: NO
  SEQUENCE NUMBER: 2
 DESCRIPTION:
 The date/time to search from. The default is NOW.
INPUT PARAMETER: GMVT   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 5   REQUIRED: YES
  SEQUENCE NUMBER: 3
 DESCRIPTION:
 The vital type abbreviation as it appears in FILE 120.51, Field 1 (e.g.,
 WT).
INPUT PARAMETER: GMVFLAG   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 1   REQUIRED: NO
  SEQUENCE NUMBER: 4
 DESCRIPTION:
 A flag to indicate if the search should look before or after the date/time
 specified in the GMVDT value where 1 indicates before, 2 indicates after
 and 0 indicates either direction.
 RETURN PARAMETER DESCRIPTION:
 Returns a string composed of two pieces. The first piece contains the
 observation date/time (FILE 120.5, Field .01) of the record that was
 found. The second piece contains the rate (FILE 120.5, Field 1.2) of the
 record. If there is an error, the first piece will be -1 and the second
 piece will be the error text.

  Example:

  > S GMVDFN=134,GMVDT=3090225.08,GMVT="WT",GMVFLAG=0
  > D CLOSEST(.TEST,GMVDFN,GMVDT,GMVT,GMVFLAG) ZW TEST
  > TEST="3081106.142926^135"

NAME: **GMV CONVERT DATE**   TAG: GETDT
  ROUTINE: GMVGETQ   RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
[2]DESCRIPTION:
 This remote procedure call converts a user-supplied date/time into VA
 FileMan's internal and external date format.

 This remote procedure call is documented in Integration Agreement 4353.
INPUT PARAMETER: GMRDATE   PARAMETER TYPE: LITERAL

---

[1] September 2009 Patch GMRV*5.0*23 Added new routine and description.
[2] April 2006 Patch GMRV*5.0*3 Updated the routine description.

```
   MAXIMUM DATA LENGTH: 30              REQUIRED: YES
    SEQUENCE NUMBER: 1
   DESCRIPTION:
   GMRDATE is the user-supplied date/time text.
   RETURN PARAMETER DESCRIPTION:
   RESULT=Date in internal FileMan format^Date in external FileMan format

   Example:
    > S GMRDATE="10/11/2005@10:30AM"
    > D GETDT^GMVGETQ(.RESULT,GMRDATE) ZW RESULT
    > RESULT="3051011.103^OCT 11, 2005@10:30:00"
```

NAME: **GMV CUMULATIVE REPORT**   TAG: EN1
```
   ROUTINE: GMVSC0                      RETURN VALUE TYPE: SINGLE VALUE
   AVAILABILITY: RESTRICTED             INACTIVE: ACTIVE
  DESCRIPTION:
  Prints the Cumulative Vitals Report.
INPUT PARAMETER: GMVDATA                 PARAMETER TYPE: LITERAL
   MAXIMUM DATA LENGTH: 150             REQUIRED: YES
    SEQUENCE NUMBER: 1
   DESCRIPTION:
  A multi-piece variable that identifies the values needed to run the
  report.

   Piece  1: DFN
          2: Start date/time of the report range (FileMan format)
          3: End date/time of the report range (FileMan format)
          4: n/a
          5: Device name (File 3.5, Field .01)
          6: Device internal entry number
          7: date/time to print the report (FileMan format)
          8: ward internal entry number (File 42)
          9: hospital location internal entry number (File 44)
         10: list of rooms separated by a comma (e.g., 200,210,220)
  RETURN PARAMETER DESCRIPTION:
  Returns a message stating the outcome of the request to queue the report.
  If the report was successfully queued, RESULT will be "Report sent to
  device. Task #: " ZTSK" where ZTSK is the task number of the job. If the
  report could not be queued, RESULT will be "Unable to task the report."
```

[1]NAME: **GMV DLL VERSION**   TAG: DLL
```
   ROUTINE: GMVUTL8                     RETURN VALUE TYPE: SINGLE VALUE
   AVAILABILITY: SUBSCRIPTION           INACTIVE: ACTIVE
  DESCRIPTION:
  Returns a YES or NO response to indicate if the Dynamic Link Library (DLL)
  file should be used.

  This remote procedure call is documented in Integration Agreement 4420.
INPUT PARAMETER: GMVX                    PARAMETER TYPE: LITERAL
   MAXIMUM DATA LENGTH: 50              REQUIRED: YES
    SEQUENCE NUMBER: 1
   DESCRIPTION:
  This value is the name of the file and the date/time associated with it
  (e.g., GMV_VITALSVIEWENTER.DLL:v. 07/21/05 10:34).
  RETURN PARAMETER DESCRIPTION:
  Returns YES if the file can be used. Returns NO, if the file cannot be
  used. Returns null if the file was not found.
```

---

[1] April 2006 Patch GMRV*5.0*3 Added new routine and description.

```
Example:
 > S GMVX="GMV_VITALSVIEWENTER.DLL:v. 07/21/05 10:34"
 > D DLL^GMVUTL8(.RESULT,GMVX) ZW RESULT
 > RESULT="NO"
```

NAME: **GMV ENTERED IN ERROR-PATIENT**   TAG: EN1
  ROUTINE: GMVER0   RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
 DESCRIPTION:
 Prints a report of all vitals/measurements entered in error for the
 selected patient for a given date/time range.
INPUT PARAMETER: GMVDATA   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 150   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 A multi-piece variable that identifies the values needed to run the
 report.

   Piece 1: DFN
          2: Start date/time of the report range (FileMan format)
          3: End date/time of the report range (FileMan format)
          4: n/a
          5: Device name (File 3.5, Field .01)
          6: Device internal entry number
          7: date/time to print the report (FileMan format)
          8: n/a
          9: n/a
         10: n/a
 RETURN PARAMETER DESCRIPTION:
 Returns a message stating the outcome of the request to queue the report.
 If the report was successfully queued, RESULT will be "Report sent to
 device. Task #: " ZTSK" where ZTSK is the task number of the job. If the
 report could not be queued, RESULT will be "Unable to task the report."

NAME: **GMV EXTRACT REC**   TAG: GETVM
  ROUTINE: GMVGETD   RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 [1]DESCRIPTION:
 This remote procedure call retrieves vital records from the GMRV Vital
 Measurement (#120.5) file for a selected patient within a given date span.

 This remote procedure call is documented in Integration Agreement 4416.
INPUT PARAMETER: GMRVDATA   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 30   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 GMRVDATA consists of 4 pieces of information:
  piece1^piece2^piece3^piece4

  where piece1 = Patient (#2) file pointer (i.e., DFN)
        piece2 = End date of search (FileMan internal format)
        piece3 = single vital type abbreviation (File 120.51, Field 1)
                 [optional] If not defined, the default is
                 "T;P;R;BP;HT;WT;PN;PO2;CG;CVP"
        piece4 = Start date of search (FileMan internal format)
 RETURN PARAMETER DESCRIPTION:
 Returns the name of the global array (i.e., ^TMP($J,"GRPC")) containing a

---

[1] April 2006 Patch GMRV*5.0*3 Updated the routine description.

```
list of vital records for the selected patient within the defined date
range.

 The TMP global contains:
 ^TMP($J,"GRPC",n)=piece1^piece2

 where piece1 = File 120.5 IEN
       piece2 = a string of text in the following format:
               Date/time taken (external)   Vital Type Abbreviation:
               Rate U.S. units (Metric value) (Qualifiers)
           n = sequential number starting at 1.

 Example:
 > S GMRVDATA="134^3051028^BP^3051001"
 > D GETVM^GMVGETD(.RESULT,GMRVDATA) ZW RESULT
 > RESULT="^TMP(538999278,"GRPC")"
 > D ^%G
 > Global ^TMP($J,"GRPC"
 > ^TMP(538999278,"GRPC",1)=8858^10/11/05@16:35   B/P:   120/80*  (L ARM,
   SITTING, CAROTID, CALF) _VITPROVIDER,ONE
 >                         2)=8961^10/20/05@14:47   B/P:   128/81*  (L ARM,
   SITTING, PALPATED) _VITPROVIDER,TWO

 If there is no data, then the following is returned:

 ^TMP($J,"GRPC",1)=0^NO VITALS/MEASUREMENTS ENTERED WITHIN THIS PERIOD
```

[1]NAME: **GMV GET CATEGORY IEN**   TAG: CATEGORY
  ROUTINE: GMVUTL8   RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
 DESCRIPTION:
 Returns the IEN if the value is found in the GMRV VITAL CATEGORY (#120.53)
 file.

 This remote procedure call is documented in Integration Agreement 4354.
 INPUT PARAMETER: GMVCAT   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 45   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 GMVCAT = Name of Category (from FILE 120.53) (e.g., METHOD)
 RETURN PARAMETER DESCRIPTION:
 Returns the IEN if GMVCAT exists in FILE 120.53

 Example:
  > S GMVCAT="METHOD"
  > D CATEGORY^GMVUTL8(.RESULT,GMVCAT) ZW RESULT
  > RESULT=2

NAME: **GMV GET CURRENT TIME**   TAG: TIME
  ROUTINE: GMVUTL7   RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
  WORD WRAP ON: FALSE
 [2]DESCRIPTION:
 Gets the current date and time from the server.

 This remote procedure call is documented in Integration Agreement 4355.

---

[1] April 2006 Patch GMRV*5.0*3 Added new routine and description.
[2] April 2006 Patch GMRV*5.0*3 Updated the routine description.

```
 RETURN PARAMETER DESCRIPTION:
 Returns current date and time in FileMan internal and external format.

 Example:
  > D TIME^GMVUTL7(.RESULT) ZW RESULT
  > RESULT=3051011.143332

 Note: There is an input parameter, P2, listed in the TIME line tag of the
 GMVUTL7 routine. However, it is not used. It can be set to any value or
 omitted. It remains for backwards compatibility.
```

[1]NAME: **GMV GET VITAL TYPE IEN**   TAG: TYPE

```
  ROUTINE: GMVUTL8                     RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: SUBSCRIPTION           INACTIVE: ACTIVE
 DESCRIPTION:
 Returns the IEN if the value is found in the GMRV VITAL TYPE (#120.51)
 file.

 This remote procedure call is documented in Integration Agreement 4357.
INPUT PARAMETER: GMVTYPE                PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 55               REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 GMVTYPE = Name of Vital Type (from FILE 120.51) (e.g., WEIGHT)
 RETURN PARAMETER DESCRIPTION:
 Returns the IEN if GMVTYPE exists in FILE 120.51.

 Example:
  > S GMVTYPE="WEIGHT"
  > D TYPE^GMVUTL8(.RESULT,GMVTYPE) ZW RESULT
  > RESULT=9
```

NAME: **GMV LATEST VITALS BY LOCATION**   TAG: EN1

```
  ROUTINE: GMVDS1                      RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: RESTRICTED             INACTIVE: ACTIVE
 DESCRIPTION:
 Prints the latest vitals/measurements for all patients on a given ward
 location.
INPUT PARAMETER: GMVDATA                PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 150              REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 A multi-piece variable that identifies the values needed to run the
 report.

   Piece  1: n/a
          2: n/a
          3: n/a
          4: n/a
          5: Device name (File 3.5, Field .01)

 report could not be queued, RESULT will be "Unable to task the report."

[1]NAME: **GMV LATEST VM**   TAG: GETLAT
  ROUTINE: GMVGETD   RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 DESCRIPTION:
 This remote procedure call retrieves the latest vital records for a given
 patient.

 This remote procedure call is documented in Integration Agreement 4358.
INPUT PARAMETER: GMRDFN   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 10   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 GMRDFN variable is a pointer to the Patient (#2) file (i.e., DFN).
 RETURN PARAMETER DESCRIPTION:
 Returns the name of the global array (i.e., ^TMP($J,"GRPC")) containing
 the latest vitals for the selected patient.

  The TMP global contains:
   ^TMP($J,"GRPC",n)=piece1
     where piece1 = is a formatted line of text.
             n = sequential number starting at 1.

 The formatted line of text includes the vital type, value and unit
 (U.S.), value and unit (metric), qualifiers, supplemental oxygen, body
 mass index value, person who entered the record and the database where
 the record is stored.

---

[1] Patch GMRV*5.0*23 September 2009 Updated routine description.

```
 If there is no data for the patient, the following is returned:
  ^TMP($J,"GRPC",1)=There are no results to report

 Example:
  > S GMRDFN=134
  > D GETLAT^GMVGETD(.RESULT,GMRDFN) ZW RESULT
  > RESULT="^TMP(539349605,"GRPC")"
  > D ^%G
  > Global ^TMP($J,"GRPC"
  > ^TMP(539349605,"GRPC",1)=Temp.: (08/09/05@08:00)  102 F  (38.9 C)*
    (ORAL) _VITPROVIDER,ONE_Vitals
  >                         2)=Pulse:        (07/14/05@16:33)  55
    (LEFT,CAROTID,PALPATED,LYING) _VITPROVIDER,ONE_Vitals
```

Enter RETURN to continue or '^' to exit:
```
  >                         3)=Resp.:        (07/14/05@16:33)  31
    (SPONTANEOUS,SITTING) _VITPROVIDER,ONE_Vitals
  >                         4)=Pulse Ox:     (08/22/05@13:48)  99% with

```

[1]NAME: **GMV LOCATION SELECT**   TAG: RPC
  ROUTINE: GMVRPCHL   RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 [2]DESCRIPTION:
Select a hospital location by name, from a patient appointment or from a
 patient admission. Can also generate a list of active clinics.

 This remote procedure is documented in Integration Agreement 4461.
INPUT PARAMETER: OPTION   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 10   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 Routine tag line in GMVRPCHL to call.
INPUT PARAMETER: DATA   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 100   REQUIRED: YES
  SEQUENCE NUMBER: 2
 DESCRIPTION:
 Other data as required for the call.
 RETURN PARAMETER DESCRIPTION:
 This remote procedure call allows the user to select a hospital location.

The entry point is RPC^GMVRPCHL. It has input parameters of RESULTS,

---

[1] April 2006 Patch GMRV*5.0*3 Added new routine and description.
[2] June 2008 Patch GMRV*5.0*22 Updated routine description.

```
   OPTION and DATA (ex. RPC^GMVRPCHL(.RESULTS,OPTION,DATA).

The RESULTS variable will contain the ^TMP("GMVHLOC",$J) global array
reference. The ^TMP("GMVHLOC",$J) global array contains the results.

The OPTION variable identifies a line label in the GMVRPCHL routine that
will be invoked to process the call.

The DATA variable contains any additional values needed by the OPTION
variable to process the call.

 1) When the OPTION value is NAME, this RPC will do a file lookup.

 The DATA value is a three part value separated by carets(^). The first
 part is a file number. The second part is a value to look up. The third
 part is the field or fields to do the look up on. If the third piece is
 not defined, the lookup is done on the .01 field of the file.

 The TMP global contains:
  ^TMP("GMVHLOC",$J,0)=piece1
  ^TMP("GMVHLOC",$J,n)=piece2^piece3

   where piece1 = number of entries found
         piece2 = file number, a semi-colon and record IEN
         piece3 = field value

Example:
>S OPTION="NAME",DATA="44^OUTPATIENT^.01"
>D RPC^GMVRPCHL(.RESULT,OPTION,DATA) ZW RESULT
>RESULT="^TMP("GMVHLOC",539052767)"
>D ^%G
>Global ^TMP("GMVHLOC",$J
>^TMP("GMVHLOC",539052767,0)=3
                          1)=44;75^OUTPATIENT NUC MED
                          2)=44;74^OUTPATIENT RADIOLOGY
                          3)=44;80^OUTPATIENT ULTRASOUND

2) When the OPTION value is APPT, this RPC will return a list of clinic
appointments for the patient.

The DATA value is a four part value separated by carets(^). The first
piece is DFN. The second piece is the start date of the search. If
not defined, this value defaults to 365 days prior to today. The third
piece is the end date of the search. If not defined, the value defaults
to today. Both dates are in FileMan internal format. The fourth piece is
a string of numbers to indicate what types of appointments to return. If
not defined, the value defaults to "123456789" (i.e., all appointment
types) where:

1 - Active/Kept
2 - Inpatient appts. only
3 - No-shows
4 - No-shows, auto-rebook
5 - Cancelled by clinic
6 - Cancelled by clinic, auto rebook
7 - Cancelled by patient
8 - Cancelled by patient, auto rebook
9 - No action taken

The TMP global contains:
```

```
 ^TMP("GMVHLOC",$J,0)=piece1
 ^TMP("GMVHLOC",$J,n)=piece2^piece3^piece4^piece5^piece6^piece7
                        ^piece8^piece9^
```

```
  where piece1 = number of entries found
        piece2 = date/time of appt (FM internal)
        piece3 = date/time of appt (external)
        piece4 = hospital location IEN (FILE 44)
        piece5 = hospital location name (FILE 44, Field .01)
        piece6 = appt status (internal)
        piece7 = appt status (external)
        piece8 = appt type (internal)
        piece9 = appt type (external)
```

```
Example:
> S OPTION="APPT",DATA="78^3051201^3051206^"
> D RPC^GMVRPCHL(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVHLOC",539052767)"
> D ^%G
> Global ^TMP("GMVHLOC",$J
> ^TMP("GMVHLOC",539052767,0)=1
                             1)=3051206.1^DEC 6,2005@10:00^88^WEIGHT
                                CLINIC^^^9^REGULAR
```

3) When the OPTION value is ADMIT, this RPC will return a list of hospital admissions for the patient specified.

The DATA value is the patient's DFN.

The TMP global contains:
```
 ^TMP("GMVHLOC",$J,0)=piece1
 ^TMP("GMVHLOC",$J,n)=piece2^piece3^piece4^piece5^piece6
```

```
  where piece1 = number of entries found
        piece2 = date/time of admission (external)
        piece3 = hospital location IEN (FILE 44)
        piece4 = hospital location name (FILE 44, Field .01)
        piece5 = type of movement (FILE 405.1, Field .01)
        piece6 = movement IEN (FILE 405)
```

```
Example:
> S OPTION="ADMIT",DATA=134
> D RPC^GMVRPCHL(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVHLOC",539052767)"
> D ^%G
> Global ^TMP("GMVHLOC",$J
> ^TMP("GMVHLOC",539052767,0)=1
                             1)=Apr 09, 2001 1:48:43 pm^67^
                                2-ASM^DIRECT^1712
```

4) When the OPTION value is CLINIC, this RPC will return a list of active clinics.

```
The DATA value is FROM^MAXIMUM^DIRECTION.
   Where:
          FROM = Value to begin the search (optional). Default is
                 null (i.e., start with the first entry in the B x-ref).
       MAXIMUM = Maximum number of entries to return. (optional)
                 Default is 100.
     DIRECTION = Direction of search (optional). 1 means forward and -1
```

```
                         means backwards. Default is 1.

  The TMP global contains:
   ^TMP("GMVHLOC",$J,0)=piece1
   ^TMP("GMVHLOC",$J,n)=piece2^piece3

    where piece1 = number of entries found
          piece2 = 44;ien (44, a semi-colon and the entry number)
          piece3 = location name (FILE 44, Field .01)
          n is a sequential number starting with zero

  Example:
 > S OPTION="CLINIC",DATA="A^5^1"
 > K RESULTS D RPC^GMVRPCHL(.RESULTS,OPTION,DATA) ZW RESULTS
 > RESULTS="^TMP("GMVHLOC",540221719)"
 > D ^%G
 > Global ^TMP("GMVHLOC",$J
 > ^TMP("GMVHLOC",540221719,0)=5
                              1)=44;140^ANDY'S AUDIO NON-COUNT CLINIC
                              2)=44;139^ANDY'S AUDIOLOGY COUNT CLINIC
                              3)=44;76^AUDIOLOGY AND SPEECH PATHOLOGY
                              4)=44;87^BARB'S CLINIC
                              5)=44;217^BOISE OUTPATIENT
```

If an error is encountered for NAME, ADMIT, APPT or CLINIC, a "-1"
 followed by a caret and the error message text (i.e., -1^error message) is
 returned in RESULT(0).

NAME: **GMV MANAGER**   TAG: RPC
  ROUTINE: GMVRPCM   RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 [1]DESCRIPTION:
 Performs many functions for the Manager module.

 This remote procedure call is documented in Integration Agreement 4360.
INPUT PARAMETER: OPTION   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 10   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 Routine tag line in GMVRPCM to call.
INPUT PARAMETER: DATA   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 100   REQUIRED: YES
  SEQUENCE NUMBER: 2
 DESCRIPTION:
 Other data as required for the call.
 RETURN PARAMETER DESCRIPTION:
 This remote procedure call performs various actions such as building
 selection lists and modifying package parameters. The entry point is
 RPC^GMVRPCM. It has input parameters of RESULTS, OPTION and DATA (ex:
 RPC^GMVRPCM(.RESULTS,OPTION,DATA).

 The RESULTS variable will contain the ^TMP("GMVMGR",$J) global array
 reference. The ^TMP("GMVMGR",$J) global array contains the results.

 The OPTION variable identifies a line label in the GMVRPCM routine
 that will be invoked to process the call.

---

[1] April 2006 Patch GMRV*5.0*3 Updated the routine description.

The DATA variable contains any additional values needed by the OPTION variable to process the call.

1) When the OPTION value is ADDQUAL, this RPC will link a GMRV VITAL QUALIFIER (#120.52) file entry to a GMRV VITAL TYPE (#120.51) file entry.

The DATA value is a three part value separated by semi-colons(;). The first value is the FILE 120.51 internal entry number (IEN). The second value is the GMRV VITAL CATEGORY (#120.53) IEN. The third value is the GMRV VITAL QUALIFIER (#120.52).

Example:

```
 > S DATA="1;1;1"
 > S OPTION="ADDQUAL"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539356158,0)=1^Qualifier Assigned
```

If an error is encountered, a "-1" followed by a caret and the error message text (i.e., -1^error message) is returned.

2) When the OPTION value is DELQUAL, this RPC will unlink a qualifier to a GMRV VITAL TYPE (#120.51) file entry.

The DATA value is a three part value separated by semi-colons. The first value is the FILE 120.51 internal entry number (IEN). The second value is the GMRV VITAL CATEGORY (#120.53) IEN. The third value is the GMRV VITAL QUALIFIER (#120.52) IEN.

Example:
```
 > S DATA="1;1;1"
 > S OPTION="DELQUAL"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539356158,0)=1^Qualifier removed.
```

If an error is encountered, a "-1" followed by a caret and the error message text (i.e., -1^error message) is returned.

3) When the OPTION value is DELTEMP, this RPC will delete a data input template definition.

The DATA value is a two part value separated by a caret (^). The first value is the ENTITY value. See IA #2263 for a list of entity values. The second value is the name of the data input template.

Example:
```
 > S DATA="USR^PAIN ONLY"
 > S OPTION="DELTEMP"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
```

```
 > ^TMP("GMVMGR",539356158,0)=1^Template Removed.
```

If an error is encountered, a "-1" followed by a caret and the error
message text (i.e., -1^error message) is returned.

4) When the OPTION value is GETCATS, this RPC will return a list of
qualifiers (FILE 120.52) associated with a vital type (FILE 120.51).

The DATA value is a one part value. It is a pointer value to FILE 120.51

The TMP global contains:
```
 ^TMP("GMVMGR",$J,0)=piece1^piece2
 ^TMP("GMVMGR",$J,n)=piece3^piece4^piece5
```

```
  where piece1 = number of categories (FILE 120.53) associated with this
                 vital type
        piece2 = vital type name
        piece3 = category IEN (FILE 120.53)
        piece4 = category name (FILE 120.53, Field .01)
        piece5 = qualifier names (FILE 120.52, Field .01) separated by a
                 comma and space
             n = sequential number starting with 1
```

Example:
```
 > S DATA="21"
 > S OPTION="GETCATS"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539356158,0)=1^PULSE OXIMETRY
                          1)=2^METHOD^AEROSOL/HUMIDIFIED MASK, CPAP, FACE
   TENT, L ARM, MASK, NASAL CANNULA, NON RE-BREATHER, PARTIAL RE-BREATHER,
   ROOM AIR, T-PIECE, TRACHEOSTOMY COLLAR, VENTILATOR, VENTURI MASK
```

If an error is encountered, a "-1" followed by a caret and the error
message text (i.e., -1^error message) is returned.

5) When the OPTION value is GETDATA, this RPC will return the value of
the entry you specify.

The DATA value is a three part value. The first part is the file number.
The second part is the IEN number of the entry. The third part is the
field number.

The TMP global contains:
```
 ^TMP("GMVMGR",$J,0)=external value of the field
```

Example:
```
 > S DATA="120.51^1^1"
 > D RPC(.RESULT,"GETDATA",DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539339804)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539339804,0)=BP
```

If a value cannot be found, then a null value is returned.

6) When the OPTION value is GETDEF, this RPC will return default template names.

The DATA value is a one part value. If it is null, then all default templates for that user will be returned.

The TMP global contains:
```
 ^TMP("GMVMGR",$J,0)=piece1
 ^TMP("GMVMGR",$J,n)=piece2^piece3
```

```
 where piece1 = number of templates found
       piece2 = an IEN value, a semi-colon, and a global reference
       piece3 = template name
            n = sequential number starting with 1
```

Example A:
```
 > S DATA=""
 > S OPTION="GETDEF"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539356158,0)=4
                            1)=125;SC(^WARD 10A
                            2)=334;DIC(4.2,^TEST
                            3)=4601;VA(200,^Height ONLY
                            4)=547;VA(200,^All Vital Signs
```

If the DATA value is an entity value (see IA 2263 for a list of entity values), then the default template name for that entity will be returned.

The TMP global contains:
```
 ^TMP("GMVMGR",$J,0)=template name
```

Example B:
```
 > S DATA="USR"
 > S OPTION="GETDEF"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539356158,0)=MY DEFAULT
```

If an error is encountered, a "-1" followed by a caret and the error message text (i.e., -1^error message) is returned.

7) When the OPTION value is GETHILO, this RPC will return the abnormal high or low value for a vital type.

The DATA value is a one part value which identifies a field number in the GMRV VITALS PARAMETERS (#120.57) field.

The TMP global contains:
```
 ^TMP("GMVMGR",$J,0)=field value
```

Example:
```
 > S DATA=5.2
 > S OPTION="GETHILO"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
```

```
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539356158,0)=94
```

A zero is returned if there is no value in the field.

8) When the OPTION value is GETLIST, this RPC returns a list of entries
for the file number specified.

The DATA value is a one part value. It is a file number.

The TMP global contains:
```
 ^TMP("GMVMGR",$J,0)=piece1^piece2
 ^TMP("GMVMGR",$J,n)=piece3^piece4
```

```
 where piece1 = number of entries returned
        piece2 = file name [not returned in all cases]
        piece3 = file number, a semi-colon and record IEN
        piece4 = the .01 value of the record
             n = sequential number starting with 1
```

Examples:
```
 Retrieve a list of wards.
 > S DATA=42
 > S OPTION="GETLIST"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539363784)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539363784,0)=26^WARD LOCATION
                             1)=42;14^10A
                             n)=42;15^10B
                             26)=42;39^10Z
```

```
 Retrieve a list of clinics.
 > S DATA=44
 > S OPTION="GETLIST"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539363784)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539363784,0)=61
                             1)=44;6^HOUSE/A
                             n)=44;8^HOUSE/C
                             61)=44;39^HOUSE/ZZ
```

```
 Retrieve a list vital types.
 > S DATA=120.51
 > S OPTION="GETLIST"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539363784)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539363784,0)=10^GMRV VITAL TYPE
                             1)=120.51;1^BLOOD PRESSURE
                             N)=120.51;19^CENTRAL VENOUS PRESSURE
                             10)=120.51;9^WEIGHT
```

```
 Retrieve a list of qualifiers.
 > S DATA=120.52
```

```
> S OPTION="GETLIST"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539363784)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539363784,0)=80^GMRV VITAL QUALIFIER
                             1)=120.52;74^ABDOMINAL
                             n)=120.52;42^ACTUAL
                             80)=120.52;99^WRIST

 Retrieve a list of CPRS teams.
> S DATA=100.21
> S OPTION="GETLIST"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539363784)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539363784,0)=103
                             1)=100.21;28^1AS
                             n)=100.21;60^1ASO
                             103)=100.21;96^consult team

 Retrieve a list of nursing units.
> S DATA=211.4
> S OPTION="GETLIST"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539363784)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539363784,0)=21
                             1)=211.4;7^10E
                             n)=211.4;17^10W
                             21)=211.4;9^SICU
```

If an error is encountered, a "-1" followed by a caret and the error
message text (i.e., -1^error message) is returned.

9) When the OPTION value is GETQUAL, this RPC returns a list of
qualifiers associated with this vital type.

The DATA value is a two part value separated by a semi-colon. The first
part is vital type (FILE 120.51) IEN. The second part is a category (FILE
120.53) IEN.

The TMP global contains:
```
 ^TMP("GMVMGR",$J,0)=piece1^piece2
 ^TMP("GMVMGR",$J,n)=piece3^piece4
```

  where piece1 = number of entries found
        piece2 = category name (FILE 120.53, Field .01)
        piece3 = qualifier IEN
        piece4 = qualifier name (FILE 120.52, Field .01)
              n = sequential number starting with 1

Example:
```
> S DATA="1;1",OPTION="GETQUAL"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539356158)"
> D ^%G
> Global ^TMP("GMVMGR",$J
```

```
 > ^TMP("GMVMGR",539356158,0)=6^LOCATION
                           1)=139^Test Qualifier
                           2)=53^FEMORAL
                           3)=2^L ARM
                           4)=4^L LEG
                           5)=24^PERIPHERAL
                           6)=1^R ARM
```

If an error is encountered, a "-1" followed by a caret and the error
message text (i.e., -1^error message) is returned.

10) When the OPTION value is GETTEMP, this RPC will return a list data
input templates defintions.

The DATA value is a two part value separated by a caret. The first part
is an entity value. See IA 2263 for a list of entities. The second part is
a data input template name.

When DATA is null, all data input template definitions are returned.

The TMP global contains:
```
 ^TMP("GMVMGR",$J,0)=piece1
 ^TMP("GMVMGR",$J,n)=piece2^piece3^piece4^piece5^piece6
```

```
  where piece1 = number of entries returned
        piece2 = 1, 2, 3, or 4. (1 = Domain, 2 = Institution, 3 = Hospital
                  location and 4 = New Person)
        piece3 = file IEN, a semi-colon and global reference
        piece4 = Field .01 value of the file specified in piece3
        piece5 = template name
        piece6 = template description text, a bar, vital type IEN (FILE
120.51), a colon, a metric flag (0=U.S. and 1=metric), category IEN
(FILE 120.53), a coma, and a qualifier IEN (FILE 120.52), a tilde
indicates additional category and qualifier combinations for the vital
type. A semi-colon indicates the start of the next vital type.
              n = sequential number starting with 1
```

Example:
```
 > S DATA="USR",OPTION="GETTEMP"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539356158,0)=1
                           1)=4^547;VA(200,^VITUSER,ONE^MY DEFAULT^ALL
                              VITALS|1:0:1,2~2,59~3,50;20:1|
```

If an error is encountered, a "-1" followed by a caret and the error
message text (i.e., -1^error message) is returned.

11) When the OPTION value is LOOKUP, this RPC will do a file lookup

The DATA value is a three part value separated by a caret. The first part
is a file number. The second part is a value to look up. The third part is
the field or fields to do the look up on. If the third piece is not
defined, the lookup is done on the .01 field of the file.

The TMP global contains:

```
^TMP("GMVMGR",$J,0)=piece1
^TMP("GMVMGR",$J,n)=piece2^piece3

  where piece1 = number of entries found
        piece2 = file number, a semi-colon and record IEN
        piece3 = field value
```

Example:
```
> S DATA="44^OUTPAT^.01",OPTION="LOOKUP"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539359648)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539359648,0)=3
                          1)=44;75^OUTPATIENT NUC MED
                          2)=44;74^OUTPATIENT RADIOLOGY
                          3)=44;80^OUTPATIENT ULTRASOUND
```

If an error is encountered, a "-1" followed by a caret and the error
message text (i.e., -1^error message) is returned.

12) When the OPTION value is NEWQUAL, this RPC will always return an
error message instructing the user to use the New Term Rapid Turnaround
process.

The DATA value is always null.

Example:
```
> S DATA=""
> S OPTION="NEWQUAL"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539356158)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539356158,0)=-1^Use the New Term Rapid Turnaround (NTRT)
  process to add qualifiers
```

13) When the OPTION value is NEWTEMP, this RPC will file a new data
input template.

The DATA value is a three part value separated by a caret. The first part
is an entity. See IA 2263 for a list of entities. The second part is
the name of the data input template. The third part is the description
text. If the third part is null, the template description will default to
"No Description".

The TMP global contains:
```
^TMP("GMVMGR",$J,0)=piece1^piece2^piece3^piece4

  where piece1 = 1, 2, 3, or 4 (1 = DOMAIN (#4.2), 2 = INSTITUTION (#4),
                 3 = HOSPITAL LOCATION, and 4 = NEW PERSON)
        piece2 = IEN, a semi-colon, and global reference (e.g., 3;DIC(4.2)
        piece3 = the .01 field value for the record in piece2
        piece4 = data input name
```

Example:
```
> S DATA="USR^1 EAST^All Vital Types"
> S OPTION="NEWTEMP"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
```

```
> RESULT="^TMP("GMVMGR",539343036)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539343036,0)=4^547;VA(200,^VITUSER,ONE^1 EAST
```

If an error is encountered, a "-1" followed by a caret and the error
message text (i.e., -1^error message) is returned.

14) When the OPTION value is RENTEMP, this RPC will rename a data input
template.

The DATA value is a three part value separated by a caret. The first part
is an entity. See IA 2263 for a list of entities. The second part is the
current template name. The third part is the new name of the template.

The TMP global contains:
 ^TMP("GMVMGR",$J,0)=1^Renamed

```
Example:
 > S DATA="USR^FRANK'S DEFAULT^MY DEFAULT"
 > S OPTION="RENTEMP"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539356158,0)=1^Renamed
```

If an error is encountered, a "-1" followed by a caret and the error
message text (i.e., -1^error message) is returned.

15) When the OPTION value is SETDATA, this RPC always returns an error
message that instructs the user to use the New Term Rapid Turnaround
process.

The DATA value is null.

```
Example:
 > S DATA=""
 > S OPTION="SETDATA"
 > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVMGR",539356158)"
 > D ^%G
 > Global ^TMP("GMVMGR",$J
 > ^TMP("GMVMGR",539356158,0)=-1^Use the New Term Rapid Turnaround (NTRT)
   process to add qualifiers
```

16) When the OPTION value is SETDEF, this RPC will set that data input
template as a default.

The DATA value is a two part value separated by a caret. The first part is
an entity. See IA 2263 for a list of entities. The second part is the
name of the template that will become the default template.

The TMP global contains:
 ^TMP("GMVMGR",$J,0)=1^Set As Default

```
Example:
 > S DATA="USR^FRANK'S LIST"
```

```
> S OPTION="SETDEF"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539356158)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539356158,0)=1^Set As Default.
```

If an error is encountered, a "-1" followed by a caret and the error message text (i.e., -1^error message) is returned.

17) When the OPTION value is SETHILO, this RPC will set the high and low abnormal values for a vital type.

The DATA value is a two part value separated by a caret. The first part is a field number in the GMRV VITALS PARAMETERS (#120.57) file. The second part is the value that field should be set to.

The TMP global contains:
 ^TMP("GMVMGR",$J,0)=1^Update Complete.

Example:
```
> S DATA="5.1^102",OPTION="SETHILO"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539356158)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539356158,0)=1^Update Complete.
```

If an error is encountered, a "-1" followed by a caret and the error message text (i.e., -1^error message) is returned.

18) When the OPTION value is SETTEMP, this RPC will save the input template definition.

DATA is a three part value separated by a caret. The first part is an entity. See IA 2263 for a list of entities. The second part is the template name. The third part is the template definition.

The TMP global contains:
 ^TMP("GMVMGR",$J,0)=1^Template Saved.

Example:
```
> S DATA="USR^ONE VITAL TYPE ONLY^CONTAINS ONLY ONE VITAL TYPE|2:0:1,102"|
> S OPTION="SETTEMP"
> D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
> RESULT="^TMP("GMVMGR",539356158)"
> D ^%G
> Global ^TMP("GMVMGR",$J
> ^TMP("GMVMGR",539356158,0)=1^Template Saved.
```

If an error is encountered, a "-1" followed by a caret and the error message text (i.e., -1^error message) is returned.

19) When the OPTION value is VALID, this RPC will validate data.

DATA is a four part value separated by a caret. The first part is the a file number. The second part is a record number. The third part is a

```
 field number. The fourth part is the value to validate.

 The TMP global contains:
  ^TMP("GMVMGR",$J,0)=1^Valid Data

 Example:
  > S DATA="120.5^8864^.01^3051012.1034",OPTION="VALID"
  > D RPC^GMVRPCM(.RESULT,OPTION,DATA) ZW RESULT
  > RESULT="^TMP("GMVMGR",539343036)"
  > D ^%G
  > Global ^TMP("GMVMGR",$J
  > ^TMP("GMVMGR",539343036,0)=1^Valid Data

 If an error is encountered, a "-1" followed by a caret and the error
 message text (i.e., -1^error message) is returned.
```

NAME: **GMV MARK ERROR**   TAG: ERROR
  ROUTINE: GMVUTL1   RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
 [1]DESCRIPTION:
 This remote procedure call marks a selected vitals record in the GMRV
 Vital Measurement (#120.5) file as entered-in-error.

 This remote procedure call is documented in Integration Agreement 4414.
INPUT PARAMETER: GMVDATA   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 60   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 GMVDATA contains the following information:

  piece1^piece2^piece3

  where piece1 = FILE 120.5 IEN
        piece2 = FILE 200 IEN (i.e., DUZ)
        piece3 = A single value to indicate the reason for the error.
                 1 = INCORRECT DATE/TIME, 2 = INCORRECT READING, 3 =
                 INCORRECT PATIENT and 4 = INVALID RECORD
 RETURN PARAMETER DESCRIPTION:
 If the record is marked as entered in error, RESULT is set to "OK".
 Otherwise, RESULT is set to "Record Not Found"

  Example:
  > S GMVDATA="1560^547^1"
  > D ERROR^GMVUTL1(.RESULT,GMVDATA) ZW RESULT
  > RESULT="OK"

NAME: **GMV NUR UNIT PT**   TAG: APTLIST
  ROUTINE: GMVUTL8   RETURN VALUE TYPE: ARRAY
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
 [2]DESCRIPTION:
 Returns a list of active patients for a nursing location.
INPUT PARAMETER: LOC   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 60   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 NURS LOCATION file (#211.4) ien.

---

[1] April 2006 Patch GMRV*5.0*3 Updated the routine description.
[2] April 2006 Patch GMRV*5.0*3 Updated the routine description.

```
RETURN PARAMETER DESCRIPTION:
ARRAY - Subscripted by sequential number with DFN in first piece and
patient name in second piece.

  example: ARRAY(#)=DFN^patient name^SSN^DOB^SEX AND AGE^ATTENDING^VETERAN
           ^INTERNAL DATE/TIME DECEASED^EXTERNAL DATE/TIME DECEASED
```

NAME: GMV PARAMETER   TAG: RPC
```
 ROUTINE: GMVPAR                          RETURN VALUE TYPE: GLOBAL ARRAY
 AVAILABILITY: SUBSCRIPTION               INACTIVE: ACTIVE
 WORD WRAP ON: TRUE
```
[1]DESCRIPTION:
```
 Sets and retrieves parameter values used by the graphical user interface.

 This remote procedure call is documented in Integration Agreement 4367.
INPUT PARAMETER: OPTION                   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 10                 REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 Routine tag line to call.
INPUT PARAMETER: ENT                      PARAMETER TYPE: LITERAL
  SEQUENCE NUMBER: 2
 DESCRIPTION:
 The entity value to use. See Integration Agreement 2263 and FILE 8989.518
 for a list of entity values.
INPUT PARAMETER: PAR                      PARAMETER TYPE: LITERAL
  SEQUENCE NUMBER: 3
 DESCRIPTION:
 The parameter value to use. See FILE 8989.51 for a list of parameter
 values. This value must start with the letters "GMV" (no quotes).
INPUT PARAMETER: INST                     PARAMETER TYPE: LITERAL
  SEQUENCE NUMBER: 4
 DESCRIPTION:
 The instance to use.
INPUT PARAMETER: VAL                      PARAMETER TYPE: LITERAL
  SEQUENCE NUMBER: 6
 DESCRIPTION:
 The value assigned to a parameter. Values are stored in FILE 8989.5.
 RETURN PARAMETER DESCRIPTION:
 This remote procedure call sets and retrieves parameter settings that
 are used in the graphical user interface.

 The entry point is RPC^GMVPAR.. It has input parameters of RESULTS,
 OPTION, ENT, PAR, INST and VAL (ex:
 RPC^GMVPAR(RESULTS,OPTION,ENT,PAR,INST,VAL).

 The RESULTS variable contains the results of the call or the location
 where the results can be found.

 The OPTION variable identifies the entry point in the GMVPAR routine
 that will be invoked to process the call.

 If an error occurrs, the ^TMP global contains:
  ^TMP($J,0)=-1^error message text

 1) When the OPTION value is DELPAR, this RPC deletes the value for the
 instance, parameter and entity specified.
```

---

[1] April 2006 Patch GMRV*5.0*3 Updated the routine description.

```
The TMP global contains:
 ^TMP($J,0)=1^Instance deleted

Example:
 > S OPTION="DELPAR",ENT="SYS",PAR="GMV DLL VERSION"
 > S INST="GMV_VITALSVIEWENTER.DLL:v. 07/21/05 10:34"
 > D RPC^GMVPAR(.RESULT,OPTION,ENT,PAR,INST) ZW RESULT
 > RESULT="^TMP(538999278)"
 > D ^%G
 > Global ^TMP($J
 > ^TMP(538999278,0)=1^Instance deleted

2) When the OPTION value is ENTVAL, this RPC returns the external value
of the entity specified.

The TMP global contains:
 TMP($J,0)=external value

Example:
 > S OPTION="ENTVAL",ENT="USR"
 > D RPC(.RESULT,OPTION,ENT) ZW RESULT
 > RESULT="^TMP(538993252)"
 > D ^%G
 > Global ^TMP($J
 > ^TMP(538993252,0)=TRAXLER,FRANK

3) When the OPTION value is GETLST, this RPC returns a list of instances
and their values for the parameter and entity specified.

The TMP global contains:
 ^TMP($J,0)=piece1
 ^TMP($J,n)=piece2^piece3

   where piece1 = number of entries returned
         piece2 = instance name
         piece3 = instance value
               n = sequential number starting with 1

Example:
 > S OPTION="GETLST",ENT="USR",PAR="GMV USER DEFAULTS"
 > D RPC(.RESULT,OPTION,ENT,PAR) ZW RESULT
 > RESULT="^TMP(538993252)"
 > D ^%G
 > Global ^TMP($J
 > ^TMP(538993252,0)=44
                   1)=DefaultTemplate^547;VA(200,|MY DEFAULT|
                   n)=UNIT_INDEX^0
                   44)=WARD_INDEX^-1

4) When the OPTION value is GETPAR, this RPC will get the value for the
instance, parameter and entity specified.

The TMP global contains:
 ^TMP($J,0)=piece1

  where piece1 = value
```

Example:
```
> S ENT="USR",PAR="GMV USER DEFAULTS",INST="DefaultTemplate"
> S OPTION="GETPAR"
> D RPC(.RESULT,OPTION,ENT,PAR,INST) ZW RESULT
> RESULT="^TMP(538993252)"
> D ^%G
> Global ^TMP($J
> ^TMP(538993252,0)=547;VA(200,|MY DEFAULT|
```

5) When the OPTION value is SETPAR, this RPC set the value of an instance
for the instance, parameter and entity specified.

The TMP global contains:
 ^TMP($J,0)=1^Parameter updated

Example:
```
> S OPTION="SETPAR",ENT="USR",PAR="GMV USER DEFAULTS",INST="SearchDelay"
> S VAL=1.5
> D RPC^GMVPAR(.RESULT,OPTION,ENT,PAR,INST,VAL) ZW RESULT
> RESULT="^TMP(538999278)"
> D ^%G
> Global ^TMP($J
> ^TMP(538999278,0)=1^Parameter updated
```

NAME: **GMV PT GRAPH**   TAG: EN1
  ROUTINE: GMVSR0   RETURN VALUE TYPE: SINGLE VALUE
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
 DESCRIPTION:
 Prints Vitals/Measurements Graphic Reports.
INPUT PARAMETER: GMVDATA   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 150   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 A multi-piece variable that identifies the values needed to run the
 report.

   Piece 1: DFN
          2: Start date/time of the report range (FileMan format)
          3: End date/time of the report range (FileMan format)
          4: Number indicating graph type *
          5: Device name (File 3.5, Field .01)
          6: Device internal entry number
          7: date/time to print the report (FileMan format)
          8: ward internal entry number (File 42)
          9: hospital location internal entry number (File 44)
         10: list of rooms separated by a comma (e.g., 200,210,220)

 * Graph = 1 prints Vital Signs Record
         = 2 prints B/P Plotting Chart
         = 3 prints Weight Chart
         = 4 prints Pulse Oximetry/Respiratory Graph
         = 5 prints Pain Chart
 RETURN PARAMETER DESCRIPTION:
 Returns a message stating the outcome of the request to queue the report.
 If the report was successfully queued, RESULT will be "Report sent to
 device. Task #: " ZTSK" where ZTSK is the task number of the job. If the
 report could not be queued, RESULT will be "Unable to task the report."

NAME: **GMV PTSELECT**   TAG: RPC
  ROUTINE: GMVRPCP   RETURN VALUE TYPE: GLOBAL ARRAY

```
 AVAILABILITY: RESTRICTED               INACTIVE: ACTIVE
 WORD WRAP ON: TRUE
 DESCRIPTION:
 Used as a method of processing a patient DFN and returning all warnings
 and notices (i.e. sensitivity or same last 4 of SSN) to the client
 application for processing.  Also includes a call to log access of
 sensitive patients to the DG SECURITY LOG file.
INPUT PARAMETER: RESULT                 PARAMETER TYPE: REFERENCE
 MAXIMUM DATA LENGTH: 30                 REQUIRED: YES
 SEQUENCE NUMBER: 1
 DESCRIPTION:
 This is the RPC return array variable.
INPUT PARAMETER: OPTION                 PARAMETER TYPE: LITERAL
 MAXIMUM DATA LENGTH: 30                 REQUIRED: YES
 SEQUENCE NUMBER: 2
 DESCRIPTION:
 Contains the appropriate method to perform within this RPC call.

 Options are:
   SELECT: Performs a select of the supplied DFN (param 3) and returns the
           notices and warnings for the DFN

   LOGSEC: Logs a security entry in the DG SECURITY LOG file.
INPUT PARAMETER: DFN                    PARAMETER TYPE: LITERAL
 MAXIMUM DATA LENGTH: 12                 REQUIRED: YES
 SEQUENCE NUMBER: 3
 DESCRIPTION:
 Contains the DFN of the patient to process in the SELECT or LOGSEC method
 of param 2.
INPUT PARAMETER: DATA                   PARAMETER TYPE: LITERAL
 MAXIMUM DATA LENGTH: 80                 REQUIRED: NO
 SEQUENCE NUMBER: 4
 DESCRIPTION:
 Used to pass in the option name to DGSEC when logging against the DG
 SECURITY LOG file.
 RETURN PARAMETER DESCRIPTION:
 RESULTS(0)   =Success or failure flag (-1 or 1) from both SELECT & LOGSEC
                methods
 RESULTS(1..n)=Messages to process by the client from the SELECT method.

NAME: GMV QUALIFIER TABLE               TAG: EN1
 ROUTINE: GMVCAQU                       RETURN VALUE TYPE: GLOBAL ARRAY
 AVAILABILITY: RESTRICTED               INACTIVE: ACTIVE
 WORD WRAP ON: TRUE
 DESCRIPTION:
 Prints a list of categories and qualifiers associated with individual
 vital types (e.g., blood pressure). Data comes from the GMRV Vital
 Qualifier (#120.52) file and the GMRV Vital Category (#120.53) file.
INPUT PARAMETER: GMVDATA                PARAMETER TYPE: LITERAL
 MAXIMUM DATA LENGTH: 150                REQUIRED: YES
 SEQUENCE NUMBER: 1
 DESCRIPTION:
 A multi-piece variable that identifies the values needed to run the
 report.

   Piece  1: n/a
          2: n/a
          3: n/a
          4: n/a
          5: Device name (File 3.5, Field .01)
          6: Device internal entry number
```

```
               7: date/time to print the report (FileMan format)
               8: n/a
               9: n/a
              10: n/a
 RETURN PARAMETER DESCRIPTION:
 Returns a message stating the outcome of the request to queue the report.
 If the report was successfully queued, RESULT will be "Report sent to
 device. Task #: " ZTSK" where ZTSK is the task number of the job. If the
 report could not be queued, RESULT will be "Unable to task the report."
```

NAME: **GMV ROOM/BED**   TAG: ROOMBED
  ROUTINE: GMVGETD   RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 DESCRIPTION:
 This procedure extracts room/bed information from Room-Bed file (#405.4)
 for a given MAS ward.
INPUT PARAMETER: GMRWARD   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 30   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 GMRWARD is a MAS ward name from the Ward Location file (#42).
 RETURN PARAMETER DESCRIPTION:
 Returns the global array name (i.e., ^TMP($J,"GROOM")) containing a list
 of rooms/beds for the given MAS ward.

 ^TMP($J,"GROOM",n)=Roombed

 n is a sequential number starting at 1.

 If there is no data, then the global array is undefined.

NAME: **GMV TEAM PATIENTS**   TAG: TEAMPT
  ROUTINE: GMVUTL3   RETURN VALUE TYPE: ARRAY
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 DESCRIPTION:
 This procedure retrieves patients assigned to a given team.
INPUT PARAMETER: GMVTEAM   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 30   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 GMVTEAM is the internal entry number of the selected team (File 100.21).
 RETURN PARAMETER DESCRIPTION:
 Returns a list of patients in the array specified.

 RESULT(n)=Patient name^DFN^SSN (w/hyphens)^DOB (external)^SEX and AGE^
        Attending^Veteran^Date of Death (external)^Date of Death
        (internal)^Ward name^Roombed

 n is a sequential number starting at 1.

NAME: **GMV USER**   TAG: RPC
  ROUTINE: GMVRPCU   RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 [1]DESCRIPTION:
 Retrieves data about the user (e.g., parameter settings).

---

[1] April 2006 Patch GMRV*5.0*3 Updated the routine description.

This remote procedure call is documented in Integration Agreement 4366.
INPUT PARAMETER: OPTION   PARAMETER TYPE: LITERAL
 MAXIMUM DATA LENGTH: 10   REQUIRED: YES
 SEQUENCE NUMBER: 1
 DESCRIPTION:
 Routine tag line to call in GMVRPCU.
INPUT PARAMETER: DATA   PARAMETER TYPE: LITERAL
 MAXIMUM DATA LENGTH: 100   REQUIRED: YES
 SEQUENCE NUMBER: 2
 DESCRIPTION:
 Other data as required for the call.
 RETURN PARAMETER DESCRIPTION:
 This Remote Procedure Call (RPC) performs various actions focusing on the
 user. The entry point is RPC^GMVRPCU. It has input parameters of RESULTS,
 OPTION and DATA (e.g., RPC^GMVRPCU(RESULTS,OPTION,DATA)).

 The RESULTS variable contains the results of the call or the location
 where the results can be found.

 The OPTION variable identifies another entry point in the GMVRPCU routine
 that is invoked to process the call.

 The DATA variable contains any values needed by the OPTION variable to
 process the call.

 1) When the OPTION value is SETPAR, this RPC will set and/or delete the
 value of a GMV USER DEFAULTS setting (e.g., the user's default template).

 The DATA value is a two part value separated by a caret. The first part
 is name of a setting. The second part is the value of the setting. If the
 second part is null, the existing value of the setting is deleted.

 The TMP global contains:
  ^TMP("GMVUSER",$J,0)=1^Parameter set.
  or
  ^TMP("GMVUSER",$J,0)=1^Parameter cleared

 Example:
  > S DATA="DefaultTemplate^547;VA(200,|MY DEFAULT",OPTION="SETPAR"|
  > D RPC^GMVRPCU(.RESULT,OPTION,DATA) ZW RESULT
  > RESULT="^TMP("GMVUSER",539374023)"
  > D ^%G
  > Global ^TMP("GMVUSER",$J
  > ^TMP("GMVUSER",539374023,0)=1^Parameter set.

 If an error is encountered, a "-1" followed by a caret and the error
 message text (i.e., -1^error message) is returned.

 2) When the OPTION value is GETPAR, this RPC will return the value of the
 GMV USER DEFAULTS setting specified in the DATA value.

 The DATA value is a one part value. It is the name of a setting (e.g.,
 the user's default template).

  The TMP global contains:
   ^TMP("GMVUSER",$J,0)=value of setting or null

 Example:

```
 > S DATA="DefaultTemplate",OPTION="GETPAR"
 > D RPC^GMVRPCU(.RESULT,OPTION,DATA) ZW RESULT
 > RESULT="^TMP("GMVUSER",539374023)"
 > D ^%G
 > Global ^TMP("GMVUSER",$J
 > ^TMP("GMVUSER",539374023,0)=547;VA(200,|ONE VITAL TYPE ONLY|
```

3) When the OPTION value is SIGNON, this RPC will return information about
the user who is currently signed onto the system.

The DATA value is not used. The user's IEN (i.e., DUZ) to the NEW PERSON
(#200) file value must be defined when this call is made.

The RESULT variable will return the following array:
  RESULT(0)=NEW PERSON (#200) file internal entry number (DUZ)
  RESULT(1)=User's name (FILE 200, Field .01)
  RESULT(2)=Domain (FILE 4.2) internal entry number
  RESULT(3)=Domain name (FILE 4.2, Field .01)
  RESULT(4)=Institution (FILE 4) internal entry number the user is signed
            into (i.e., DUZ(2))
  RESULT(5)=Institution name (FILE 4, Field .01)
  RESULT(6)="0" or "1". "1" indicates the user has the GMV MANAGER or
            programmer key. "0" indicates the user has neither key.
  RESULT(7)=The user's title (FILE 200, Field 8)
  RESULT(8)=This value is always null.
  RESULT(9)=Number of seconds the system will wait for a response from
            the user (i.e., DTIME). The default time is 300 seconds.
  RESULT(10)=INSTITUTION (#4) file IEN^FILE 4 external value^station
             number (e.g., 499^SUPPORT ISC^499).

 Example:
 > S OPTION="SIGNON"
 > D RPC(.RESULT,OPTION) ZW RESULT
 > RESULT="^TMP("GMVUSER",539375907)"
 > D ^%G
 > Global ^TMP("GMVUSER",$J
 > ^TMP("GMVUSER",539375907,0)=547
                             1)=VITUSER,ONE
                             2)=334
                             3)=DEV.DEV.FO-HINES.MED.VA.GOV
                             4)=499
                             5)=SUPPORT ISC
                             6)=1
                             7)=PROGRAMMER
                             8)=
                             9)=9999
                            10)=499^SUPPORT ISC^499
```

[1]NAME: **GMV V/M ALLDATA**                        TAG: VMDATA
  ROUTINE: GMVGGR1                          RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: SUBSCRIPTION                INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 DESCRIPTION:
 This remote procedure call lists all vitals/measurements data for a given
 date/time span.

---

[1] Patch GMRV*5.0*23  September 2009  Updated routine description.

```
  This remote procedure call is documented in Integration Agreement 4654.
INPUT PARAMETER: GMVDATA                      PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 60                     REQUIRED: YES
   SEQUENCE NUMBER: 1
 DESCRIPTION:
 GMVDATA consists of 4 pieces of data:

  piece1^piece2^piece3^piece4

  where piece1 = File 2 IEN (i.e., DFN)
        piece2 = Start date/time for search (FileMan internal format)
        piece3 = End date/time for search (FileMan internal format)
        piece4 = 0 (zero)

RETURN PARAMETER DESCRIPTION:
 RESULT array returns the data or a "NO DATA" message.

 Case A: The NO DATA message is returned.

 The TMP global returns:
  ^TMP($J,1)=lastname,first  social security number  date of birth  age
             "(Yrs)" gender
  ^TMP($J,2)="Unit:" unit  "Room:" room
  ^TMP($J,3)="Division:" division
  ^TMP($J,4)= search date range
  ^TMP($J,5)="NO DATA"

 Example:
  > S GMVDATA="90^3051012^3051012^0"
  > D VMDATA^GMVGGR1(.RESULT,GMVDATA) ZW RESULT
  > RESULT="^TMP(539349605)"
  > D ^%G
  > Global ^TMP($J
  > ^TMP(539349605,1)=VITPATIENT,ONE 000-11-1234  JAN 2,1934  71 (Yrs)
                       MALE
                 2)=Unit:    Room:
                 3)=Division:
                 4)=OCT 11,2005 - OCT 11,2005
                 5)=NO DATA

 Case B: Fourth piece of GMVDATA (Flag) is 0

 The TMP global returns:
  ^TMP($J,1)=lastname,first social security number  date of birth  age
             "(Yrs)" sex
  ^TMP($J,2)="Unit:" unit  "Room:" room
  ^TMP($J,3)="Division:" division
  ^TMP($J,4)= search date range
  ^TMP($J,n)=piece1 through piece23

  where piece1 = date of reading in mm-dd-yy format
        piece2 = time of reading in hh:mm:ss format
        piece3 = Temperature value and qualifier abbreviations
        piece4 = Pulse value and qualifier abbreviations
        piece5 = Respiration and qualifier abbreviations
        piece6 = Pulse Oximetry value, qualifier abbreviations, flow rate
                  and percentage value
        piece7 = Blood Pressure value and qualifier abbreviations
        piece8 = Weight value (pounds) and qualifier abbreviations
        piece9 = Weight value (kilos)
```

```
        piece10 = Body Mass Index calculation
        piece11 = Height value (inches) and qualifier abbreviations
        piece12 = Height value (centimeters)
        piece13 = Circumference Girth value (inches) and qualifier
                  abbreviations
        piece14 = Circumference Girth value (centimeters)
        piece15 = Central Venous Pressure value (cmH2O)
        piece16 = Central Venous Pressure value (mmHg)
        piece17 = Input value (from Intake & Output package)
        piece18 = Output value (from Intake & Output package)
        piece19 = Pain value
        piece20 = always null
        piece21 = always null
        piece22 = hospital location (FILE 44, Field .01)
        piece23 = name of person who entered the data (FILE 200, Field .01)
        piece24 = database where the record is stored

 Example:
  > S GMVDATA="134^3050901^3050930^0"
  > D VMDATA^GMVGGR1(.RESULT,GMVDATA) ZW RESULT
  > RESULT="^TMP(539349605)"
  > D ^%G
  > Global ^TMP($J
  > ^TMP(539349605,1)=VITPATIENT,TWO 000-11-1234  JUN 1,1957  48 (Yrs)
                     FEMALE
                  2)=Unit: 2-ASM   Room:
                  3)=Division: TEST HINES
                  4)=SEP 1,2005 - SEP 30,2005
                  5)=09-14-05^17:18:00^^^^^^^135- A St^61.36^22^66-

```

NAME: **GMV VITALS/CAT/QUAL**   TAG: GETVITAL
  ROUTINE: GMVUTL7   RETURN VALUE TYPE: ARRAY
  AVAILABILITY: SUBSCRIPTION   INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 [1]DESCRIPTION:
 Returns all qualifier information for the vital types selected.

 This remote procedure call is documented in Integration Agreement 4359.
INPUT PARAMETER: GMVLIST   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 60   REQUIRED: YES
  SEQUENCE NUMBER: 1
  DESCRIPTION:
 A list of vital type abbreviations (FILE 120.51, Field 1) separated by
 up-arrows (e.g., "HT^WT" for height and weight). When the value is null,
 all qualifier information will be returned for all vital types.
 RETURN PARAMETER DESCRIPTION:
 Returns the qualifier information for the selected vital types in the
 array specified. Includes the abnormal high and low values for the vital
 type, if any.

 The result array contains:
  RESULT(n)=piece1^piece2^piece3^piece4^piece5^piece6^piece7^piece8^piece9
  RESULT(n.nnn)=pieceA^pieceB^pieceC^pieceD

    where n is a sequential number starting with 1

---

[1] April 2006 Patch GMRV*5.0*3 Updated the routine description.

```
        piece1 = V for vital type
        piece2 = FILE 120.51 IEN for this vital type
        piece3 = vital type name (FILE 120.51, Field .01)
        piece4 = Abbreviation (FILE 120.51, Field 1)
        piece5 = PCE Abbreviation (FILE 120.51, Field 7)
        piece6 = If vital type is Blood Pressure this is the
                 abnormal systolic high value (File 120.57, Field 5.7).
                 If vital type is Temperature, this is the abnormal high
                 value (File 120.57, Field 5.1)
                 If vital type is Respiration, this is the abnormal high
                 value (File 120.57, Field 5.5)
                 If vital type is Pulse, this is the abnormal high value
                 (File 120.57, Field 5.3)
                 If vital type is Central Venous Pressure, this is the
                 abnormal high value (File 120.57, Field 6.1)
        piece7 = If vital type is Blood Pressure this is the
                 abnormal diastolic high value (File 120.57, Field 5.71).
                 If vital type is Temperature, this is the abnormal low
                 value (File 120.57, Field 5.2)
                 If vital type is Respiration, this is the abnormal low
                 value (File 120.57, Field 5.6)
                 If vital type is Pulse, this is the abnormal low value
                 (File 120.57, Field 5.4)
                 If vital type is Central Venous Pressure, this is the
                 abnormal low value (File 120.57, Field 6.2)
        piece8 = If vital type is Blood Pressure this is the
                 abnormal systolic low value (File 120.57, Field 5.8).
                 If vital type is Central Pressure, this is the abnormal
                 O2 saturation (File 120.57, Field 6.3)
        piece9 = If vital type is Blood Pressure this is the
                 abnormal diastolic low value (File 120.57, Field 5.81).

  RESULT(n.nnn)=pieceA^pieceB^pieceC^pieceD
   where pieceA = C for CATEGORY or Q for QUALIFIER

    if pieceA is C, then
          pieceB = FILE 120.53 IEN for this category
          pieceC = category name (FILE 120.53, Field .01)
          pieceD = null

    if pieceB is Q, then
          pieceB = FILE 120.52 IEN for this qualifier
          pieceC = qualifier name (FILE 120.52, Field .01)
          pieceD = synonym (FILE 120.52, Field .02)

 Example:
  > S GMVLIST="HT^WT"
  > D GETVITAL^GMVUTL7(.RESULT,GMVLIST) ZW RESULT
  > RESULT(1)="V^8^HEIGHT^HT^HT^"
  > RESULT(1.001)="C^4^QUALITY"
  > RESULT(1.002)="Q^42^ACTUAL^A"
  > RESULT(1.003)="Q^43^ESTIMATED^E"
  > RESULT(1.004)="Q^107^Stated^St"
  > RESULT(2)="V^9^WEIGHT^WT^WT^"
  > RESULT(2.001)="C^2^METHOD"
  > RESULT(2.002)="Q^39^OTHER^Oth"
  > RESULT(2.003)="Q^50^SITTING^Si"
  > RESULT(2.004)="Q^51^STANDING^St"
  > RESULT(2.005)="C^4^QUALITY"
  > RESULT(2.006)="Q^42^ACTUAL^A"
```

```
NAME: GMV WARD LOCATION                    TAG: WARDLOC
  ROUTINE: GMVGETD                         RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: RESTRICTED                 INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
 ¹DESCRIPTION:
This procedure extracts MAS ward locations from the Ward Location file
 (#42).
INPUT PARAMETER: DUMMY                     PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 1                    REQUIRED: NO
  SEQUENCE NUMBER: 1
  DESCRIPTION:
  When this input parameter is set to the letter "P", only wards that have
  patients will be returned. Otherwise, all active wards will be returned.
  RETURN PARAMETER DESCRIPTION:
  Returns the global array name containing a list of MAS wards (i.e.,
  ^TMP($J,"GWARD")).

  ^TMP($J,"GWARD",n)=piece1^piece2^piece3
   where:
    piece1 = ward IEN (FILE 42)
    piece2 = ward name (FILE 42, Field .01)
    piece3 = hospital location IEN (FILE 44)
    n is a sequential number starting at 1.

  Example:
   > S DUMMY="P"
   > D WARDLOC^GMVGETD(.RESULT,DUMMY) ZW RESULT
   > RESULT="^TMP(540221719,"GWARD")"
   > D ^%G
   > Global ^TMP($J,"GWARD"
   > ^TMP(540221719,"GWARD",1)=2^1AS^2
                             2)=1^2-AS^1
                             3)=13^2-ASM^67
                             4)=25^214-2 DOM^149

                             6)=4^4AS-1^4
                             7)=22^4B^153
                             8)=23^4C^155
                             9)=24^4D^154
                            10)=12^5NM^63
                            11)=6^6AS^10
                            12)=7^7AS^11
                            13)=8^DOM^23
                            14)=10^MICU^36
                            15)=5^NHCU^5

NAME: GMV WARD PT                          TAG: WARDPT
  ROUTINE: GMVGETD                         RETURN VALUE TYPE: GLOBAL ARRAY
  AVAILABILITY: RESTRICTED                 INACTIVE: ACTIVE
  WORD WRAP ON: TRUE
  DESCRIPTION:
  This procedure lists patients registered on a particular MAS ward.
INPUT PARAMETER: GMRWARD                   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 30                   REQUIRED: YES
  SEQUENCE NUMBER: 1
  DESCRIPTION:
  GMRWARD contains the name of ward from Ward Location file (#42).
  RETURN PARAMETER DESCRIPTION:
```

---

[1] June 2008 Patch GMRV*5.0*22 Updated description.

Returns the name of the global array containing the list of patients on
the selected ward (i.e., ^TMP($J,"GMRPT")).

^TMP($J,"GMRPT",n)=DFN^Name^SSN (w/hyphens)^DOB^Sex and Age^Attending^
                   Veteran^Date of Death (internal)^Date of Death
                   (external)^Ward name^Roombed

n is a sequential number starting at 1.

If there are no patients on the ward, then the global array is undefined.

NAME: **GMV WARD/ROOM PATIENTS**   TAG: ROOMPT
  ROUTINE: GMVUTL7   RETURN VALUE TYPE: ARRAY
  AVAILABILITY: RESTRICTED   INACTIVE: ACTIVE
[1]DESCRIPTION:
 Returns a list of patients in the ward and rooms specified.
INPUT PARAMETER: GMVWRD   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 60   REQUIRED: YES
  SEQUENCE NUMBER: 1
 DESCRIPTION:
 Name of the ward (e.g., 2EAST).
INPUT PARAMETER: GMVRLST   PARAMETER TYPE: LITERAL
  MAXIMUM DATA LENGTH: 150   REQUIRED: YES
  SEQUENCE NUMBER: 2
 DESCRIPTION:
 The room numbers of the ward separated by comma (e.g., 200,210,220).
 RETURN PARAMETER DESCRIPTION:
 RESULT(n)=patient name^DFN^DOB (external)^SSN (no hyphens)
  where n is a sequential number beginning with 0 (zero)

6. Archiving and Purging

[1]No provisions for archiving or purging have been made for this release and none are planned for the future.

---

[1] Patch GMRV*5.0*23 September 2009 Removed archive/purge instructions.

This page intentionally left blank for double-side printing.

8. External Relations

1. The following VistA applications must reside in the system before Vitals/Measurements, Version 5.0 can be installed:

   a. VA FileMan V. 22 or greater,
   b. Kernel V. 8.0 or greater,
   c. Kernel Toolkit V. 7.3 or greater,
   d. Kernel RPC Broker V. 1.1 or greater,
   e. PIMS V. 5.3 or greater,
   f. Intake and Output V. 4.0,
   g Health Summary V. 2.7 or greater,
   h. Nursing V. 4.0 or greater.

2. [1]Interface Control Registrations (formerly known as Integration Agreements) between the Vitals/Measurements software and other VistA applications exist. Database Interface Control Registrations (DICR) are available on the DBA menu on Forum. For complete information regarding the DICRs for Vitals V. 5.0, please refer to the *Integration Control Registrations (Agreements) Menu* [DBA IA ISC] option under the *DBA* [DBA] option on FORUM.

The following screen capture shows one way to access the DBA option in FORUM:

```
Select Software Services Primary Menu Option:  DBA MENU

   NAME   NAMESPACE AND FILESPACE REGISTRATIONS ...
   IAs    INTEGRATION CONTROL REGISTRATIONS ...
   PKG    PACKAGE FILE INFORMATION ...
   STN    INSTITUTION FILE INFORMATION ...
   STND   STANDARDS ...

Select DBA MENU Option: IAS  INTEGRATION CONTROL REGISTRATIONS

   HELP   Instructions for Entering ICRs
   GET#   GET NEW Integration Control Registration #(s)
   ADD    ADD/EDIT Pending Integration Control Registration
   ROLL   Roll up ICR into Mail Message
   FILE   File-type Integration Control Registrations Menu ...
   ROU    Routine-type ICRs Menu ...
   RPC    Remote Procedure Call-type ICRs Menu ...
   OTH    Print 'Other'-type ICRs
   SUPP   Supported References Menu ...
   CONT   Controlled Subscription ICRs Menu ...
   PRIV   Private ICRs Menu ...
   CUST   Custodial Package Menu ...
   INQ    Inquire to an Integration Control Registration
   SUBS   Subscriber Package Menu ...
   APIS   Supported API Report
   VBLE   Lookup ICRs by Variable
   PEND   Print ICRs in Pending Status
   ACTV   Print Active ICRs
```

---

[1] Patch GMRV*5.0*23 September 2009 External Relations list removed and replaced with instructions on obtaining the information online. Integration Agreements renamed Interface Control Registrations.

```
   ALL    Print ALL ICRs

Select INTEGRATION CONTROL REGISTRATIONS Option: CUST  Custodial Package Menu

   1        ACTIVE ICRs by Custodial Package
   2        Print ALL ICRs by Custodial Package
   3        Supported References Print All

Select Custodial Package Menu Option: 1  ACTIVE ICRs by Custodial Package
Select PACKAGE NAME: GMRV  GEN. MED. REC. - VITALS     GMRV     National
DEVICE: HOME//
```

9.   Internal Relations

The namespace used for version 5 is GMV.

[1] September 2009 Patch GMRV*5.0*23 Updated list.
[2] Patch GMRV*5.0*23 September 2009 Removed reference to timestamp.

This page intentionally left blank for double-side printing.

13. [1]Glossary

Access Code   A unique sequence of characters known by and assigned only to the user, the system manager and/or designated alternate(s). The access code (in conjunction with the verify code) is used by the computer to identify authorized users.

ADP Coordinator/ADPAC/Application Coordinator   Automated Data Processing Application Coordinator. The person responsible for implementing a set of computer programs (application package) developed to support a specific functional area such as Nursing, PIMS, etc.

Application   A system of computer programs and files that have been specifically developed to meet the requirements of a user or group of users. Examples of V*IST*A applications are the PIMS and Vitals/Measurements application.

Archive   The process of moving data to some other storage medium, usually a magnetic disk, and deleting the information from active storage in order to free-up disk space on the system.

Backup Procedures   The provisions made for the recovery of data files and program libraries and for restart or replacement of ADP equipment after the occurrence of a system failure.

BMI   This is the patient's body mass index, which is calculated by dividing the person's weight in kilograms by the square of his height in meters.

Bulletin   A canned message that is automatically sent by MailMan to a user when something happens to the database.

Contingency Plan   A plan which assigns responsibility and defines procedures for use of the backup/restart/recovery and emergency preparedness procedures selected for the computer system based on risk analysis for that system.

Data Dictionary   A description of file structure and data elements within a file.

Device   A hardware input/output component of a computer system (e.g., CRT, printer).

Edit   Used to change/modify data typically stored in a file.

Field   A data element in a file.

File   The M construct in which data is stored for retrieval at a later time. A group of related records.

---

[1] Patch GMRV*5.0*23 September 2009 Entire glossary updated..

File Manager or FileMan   Within this manual, FileManager or FileMan is a reference to VA
    FileMan. FileMan is a set of M routines used to enter, edit, print, and sort/ search related
    data in a file; a data base.

Global   An M term used when referring to a file stored on a storage medium, usually a magnetic
    disk. In the Vitals software, for example, vitals data is stored in one global, and patient data
    is stored in another global.

GMRV   This signifies the General Medical Record namespace assigned to the
    Vitals/Measurements application.

GMRY   This signifies the General Medical Record namespace assigned to the Intake and Output
    application.

GMV   Vitals/Measurements namespace, parent package to GMRV.

GUI   Graphical User Interface - a Windows-like screen that uses pull-down menus, icons,
    pointer devices, and other metaphor-type elements that can make a computer program more
    understandable, easier to use, allow multi-processing (more than one window or process
    available at once), etc.

I&O   The Intake and Output application.

IRMS   Information Resource Management Service.

Kernel   A set of software utilities. These utilities provide data processing support for the
    application packages developed within the VA. They are also tools used in configuring the
    local computer site to meet the particular needs of the hospital. The components of this
    operating system include: MenuMan, TaskMan, Device Handler, Log-on/Security, and other
    specialized routines.

LAYGO   An acronym for Learn As You Go. A technique used by VA FileMan to acquire new
    information as it goes about its normal procedure. It permits a user to add new data to a file.

M   Formerly known as MUMPS or the Massachusetts (General Hospital) Utility Multi-
    Programming System. This is the programming language used to write all V*ISTA*
    applications.

MailMan   An electronic mail, teleconferencing, and networking system.

Menu   A set of options or functions available to users for editing, formatting, generating reports,
    etc.

Module   A component of the Vitals software application that covers a single topic or a small
    section of a broad topic.

Namespace   A naming convention followed in the VA to identify various applications and to avoid collision between applications. It is used as a prefix for all routines and globals used by the application. The Vitals package uses GMV as its namespace.

OIFO   Office of Information Field Office, formerly known as Information Resource Management Field Office, and Information Systems Center.

Option   A functionality that is invoked by the user. The information defined in the option is used to drive the menu system. Options are created, associated with others on menus, or given entry/exit actions. For example, the GMV V/M GUI is the main menu for the Vitals/Measurements application.

Package   Otherwise known as an application. A set of M routines, files, documentation and installation procedures that support a specific function within V*IST*A (e.g., the ADT and Vitals/Measurements applications).

Password   A protected word or string of characters that identifies or authenticates a user, a specific resource, or an access type (synonymous with Verify Code).

PIMS   Patient Information Management System previously known as the MAS Package.

Pointer   A special data type of VA FileMan that takes its value from another file. This is a method of joining files together and avoiding duplication of information.

Program   A set of M commands and arguments, created, stored, and retrieved as a single unit in M.

Protocol   A single entry point referencing multiple routine entry points to execute several inter related, required processes which perform specific functions. When multiple protocols are associated with a single procedure (i.e., intravenous lines or IV lines), they are found grouped under a single option.

Qualifier   A word that gives a more detailed description of an item.

Queuing   The scheduling of a process/task to occur at a later time. Queuing is normally done if a task uses up a lot of computer resources.

<RET>   Carriage return.

Routine   A set of M commands and arguments, created, stored, and retrieved as a single unit in M.

Security Key   A function which unlocks specific options and makes them accessible to an authorized user.

Sensitive Information   Any information which requires a degree of protection and which should be made available only to authorized users.

Site Configurable   A term used to refer to features in the system that can be modified to meet the needs of each site.

Software   A generic term referring to a related set of computer programs.

Synonym   A qualifier abbreviation appended to vitals/measurements numeric values on graphic reports.

Task Manager or TaskMan   A part of Kernel which allows programs or functions to begin at specified times or when devices become available. See Queuing.

User   A person who enters and/or retrieves data in a system, usually utilizing a CRT.

Utility   An M program that assists in the development and/or maintenance of a computer system.

Verify Code   A unique security code which serves as a second level of security access. Use of this code is site specific; sometimes used interchangeably with a password.

V*ISTA*   Veterans Health Information Systems and Technology Architecture.

Vital Type   A category of vital sign or measurement (e.g., pulse, respiration, blood pressure, temperature).

Workstation   A personal computer running the Windows 9x or NT operating system.

14. Appendix A – Parameter Settings[1]

This table contains a list of parameter settings used by the Vitals/Measurement Standalone and Vitals Lite Graphical User Interfaces (GUIs).

Note: The GUIs use these parameter settings to start the software. When a GUI is open and the user changes the settings (e.g., checks a checkbox) that change works immediately in the GUI, but the parameter setting is not saved to the server until the user exits the GUI. If you are trying to debug a problem and have a GUI and a Mumps session open with the parameter settings showing at the same time, you will not see the parameter settings change until you close the GUI.

How can you see these parameter settings on the server?
Example:

>**D ^XPAREDIT**
             --- Edit Parameter Values ---

Select PARAMETER DEFINITION NAME: **GMV\<return\>**
   1   GMV ALLOW USER TEMPLATES   Allow individual user templates
   2   GMV DEFAULT VALUES   ENTER GMV DEFAULTS
   3   GMV DLL VERSION   Vitals DLL version check
   4   GMV GUI VERSION   Active Vitals Measurements executables
   5   GMV TEMPLATE   Templates for vitals V5
Press \<RETURN\> to see more, '^' to exit this list, OR
CHOOSE 1-5: **\<return\>**
   6   GMV TEMPLATE DEFAULT   Default Templates for vitals V5
   7   GMV USER DEFAULTS   GMV User Defaults
   8   GMV WEBLINK   Vitals Measurments Home Page
CHOOSE 1-8: 7
Select NEW PERSON NAME: **LASTNAME,FIRST \<return\>**

------------- Setting GMV USER DEFAULTS for User: LASTNAME,FIRST -------------
Select Parameter setting**: ?\<return\>**

Parameter setting   Value

---

[1] Patch GMRV*5.0*23 September 2009 Added Appendix A – Parameter Settings

CanvasNormal   15;0;0;1;15;15388544;15388544;ORWPT PTINQ
CloseInputWindowAfterSave   DoNotCloseInputWindow
ConversionWarningStatus   OFF
DefaultTemplate   547;VA(200,|full list
GRAPH OPTIONS VISIBLE   0
GRAPHCOLOR   16777215
GRAPHOPTIONS   OFF
GRAPHOPTIONS-1   OFF
GRAPHOPTIONS-2   OFF
GRAPHOPTIONS-3   OFF
GRAPHOPTIONS-4   ON
GRAPH_INDEX   3

Enter RETURN to continue or '^' to exit:

Parameter Name	Example	Explanation
ABNORMALBGCOLOR	15	A number that represents the data grid background color for abnormal values. There are 16 colors to choose from. 0 - Black 1 - Maroon 2 - Green 3 - Olive 4 - Navy 5 - Purple 6 - Teal 7 - Gray 8 - Silver 9 - Red 10 - Lime 11 - Yellow 12 - Blue 13 - Fuchsia 14 - Aqua 15 – White
ABNORMALBOLD	ON or OFF	ON means the abnormal values appear in bold font. OFF means the abnormal values appear in regular font.
ABNORMALQUALIFIERS	ON or OFF	ON means the qualifiers are shown on the data grid for abnormal values. OFF means they are not shown for abnormal values.
ABNORMALTEXTCOLOR	0 through 15	The number that represents the text color for abnormal values shown in the data grid. (See the list above.)

CLINIC_INDEX	1	An RPC returns an array with the list of clinics to select from. This number indicates the array node of the clinic selected. It is "-1" if no clinic was ever selected.
CPRSMetricStyle	CPRSMetricStyle or VitalsMetricStyle	When the "Units as Drop Down List" checkbox in the "Enter Vitals" window is checked this value is "CPRSMetricStyle". If it is not checked the value is "VitalsMetricStyle".
CanvasAbnormal	15;9;0;1;15	User preferences for abnormal values. Set from File | User Options | Values Display tab. 1st value (e.g., 15) - Color of the background. Same as ABNORMALBGCOLOR. 2nd value (e.g., 9) - Color of the text. Same as ABNORMALTEXTCOLOR. 3rd value (e.g., 0) - Show text in bold font. Same as ABNORMALBOLD. 4th value (e.g., 1) - Show qualifiers. Same as ABNORMAL QUALIFIERS. 5th value (e.g. 15) - Background color for today's values. Not currently used. User cannot set this value.
CanvasNormal	15;0;0;1;15;15388544;15388544;ORWPT PTINQ	User preferences for normal values. Set from File | User Options | Values Display tab. 1st value (e.g., 15) - Color of the background. Same as NORMALBGCOLOR. 2nd value (e.g., 0) - Color of the text. Same as NORMALTEXTCOLOR. 3rd value (e.g., 0) - Show text in bold font. Same as NORMALBOLD. 4th value (e.g., 1) - Show qualifiers. Same as NORMALQUALIFIERS. 5th value (e.g., 15) - Background color for today's values. Not currently used. User cannot set this value. The following values are set by the software. The user cannot change them. These values control the File |

		Patient Inquiry display. 6th value (e.g., 15388544) – Background color 7th value (e.g., 15388544) – Text color 8th value (e.g., ORWPT PTINQ) – RPC Name
DefaultTemplate	547;VA(200,|full list	The input template selected by the user. In this example, the template belongs to user 547 in the NEW PERSON file (#200). The template name is "full list".
GRAPH OPTIONS VISIBLE	0 or 1	1 means the "Values", "Time Scale", "3D" and "Allow Zoom" checkboxes are visible. 0 means they are hidden. This parameter is set from the Vitals Lite GUI.
GRAPHCOLOR	16777215	The code for the background color for the data graph. There are too many colors to list.
GRAPHOPTIONS	ON or OFF	The "Show/Hide Graph Option" controls a panel that contains the "Values", "3D", "Allow Zoom" and "Time Scale" checkboxes. ON means the panel will be displayed to the user. OFF means it will be hidden from view. Same as the GRAPH OPTIONS VISIBLE parameter but is set from the Vitals Standalone GUI.
GRAPHOPTIONS-1	ON or OFF	ON means the "Values" checkbox has a checkmark. OFF means it is blank.
GRAPHOPTIONS-2	ON or OFF	ON means the "3D" checkbox has a checkmark. OFF means it is blank.
GRAPHOPTIONS-3	ON or OFF	ON means the "Allow Zoom" checkbox has a checkmark. OFF means it is blank.
GRAPHOPTIONS-4	ON or OFF	ON means the "Time Scale" checkbox has a checkmark. OFF means it is blank.
GRAPH_INDEX	0	A number to indicate the vital type(s) that appear on the data graph. 0 – Temperature 1 – Pulse 2 – Respiration

		3 – B/P 4 – Pulse Ox 5 – Height 6 – Weight 7 – BMI 8 - Pain 9 – Height/Weight 10 - TPR 11 – B/P - Weight 12 – C/G 13 – CVP 14 – Intake 15 – Output
GRIDSIZE	212	Width in pixels of the data grid.
GridDateRange	12	Date Range selection. Default value is 12 (Two Years). 0 – Today 1 – T-1 2 – T-2 3 – T-3 4 – T-4 5 – T-5 6 – T-6 7 – T-7 8 – T-8 9 – T-9 10 – Six Months 11 – One Year 12 – Two Years 13 – All Results 14 – Date Range
LastVitalsListHeight	130	Height in pixels of the "Latest vitals on file for this patient" portion of the "Enter Vitals' window.
NORMALBGCOLOR	0 through 15	The background color for the normal values in the data grid. (See the list above.)
NORMALBOLD	ON or OFF	ON means the normal values appear in the bold font. OFF means the normal values appear in regular font.
NORMALQUALIFIERS	ON or OFF	ON means the qualifiers are shown on the data grid for normal values. OFF means they are not shown for normal values.
NORMALTEXTCOLOR	0 through 15	The number that represents the text

		color for normal values shown in the data grid. (See the list above.)
OneUnavailalbeBox		Not currently used. May be used in the future.
ParamTreeWidth	211	Width in pixels of the "Templates" portion of the "Enter Vitals" window.
