Revision History

Each time this manual is updated, the Title Page lists the new revised date and this page describes the changes. If the Revised Pages column lists "All", replace the existing manual with the reissued manual. If the Revised Pages column lists individual entries (e.g., 25, 32), either update the existing manual with the Change Pages Document or print the entire new manual.

Date	Revised Pages	Patch Number	Description
1/2014	i-iv, 5, 10-11, 12, 12a-12b, 13-14, 19-21, 21a-21b, 22-23, 25, 31, 44-44a, 45-46, 48, 48a-48d	PSB*3*73	This patch will enhance the BCMA Backup System (BCBU) to support Clinic Orders. The Backup System will be able to store a Clinic name, per each order, for orders associated with clinic locations. The existing MAR reports will now print the clinic name along with the order under a heading label of "Location". The word "INPATIENT" will also print under the "Location" heading for Inpatient Medication orders, which are associated with the ward, of patients that are admitted. This patch will add two new menu options to support the printing of MAR reports for Selected Clinic or All Clinics. (R. Santos, PM; B. Thomas, Tech Writer)
11/2013	44-46	PSB*3*59	Patients with no current medication orders are now printed consistently on the three BCBU MAR reports (Print MAR for All Wards, Print MAR for Selected Patient, and Print MAR for Selected Ward). The patient's information is followed by a message stating "No Active Medication Orders were reported to the Contingency at the time the MAR was printed", followed by multiple blank lines and a footer. Also, a blank page is no longer used as a separator on the Print MAR for a Selected Ward (PW) and the Print MAR for All Wards (PA). On both the Print MAR for a Selected Ward (PW) and the Print MAR for All Wards (PA) menus, after the question 'Report [A]LL or [C]URRENT orders?' has been answered 'CURRENT', a prompt appears, 'Include Patients without Active Medications?' (defaults to 'Yes'). Answering 'No' prevents current patients without medications from printing on the report. (A. Scott, PM; R Sutton, Technical Writer)

Date	Revised Pages	Patch Number	Description
09/2012	i, 44, 44a-44b	PSB*3*69	The Special Instructions and Other Print Info project changed these comment type fields to unlimited word processing text. This text is sent over in the same NTE segment as before. BCBU has been enhanced to receive and store the unlimited word processing text and print the word processing lines of text on the MAR reports as they were typed and stored in the Inpatient Order.

(R. Singer, PM; B. Thomas, Tech Writer) |

BCMA V. 3.0 and This Guide

Benefits of BCMA PSB*3*8

The Veterans Health Information Systems and Architecture (VistA) Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 software will provide a Class I solution to the BCMA Contingency IRA #20020403. This plan reflects the intent of VHA Directive #6210, the Automated Information Systems (AIS) Security, which states that all facilities are responsible for the development, maintenance, and annual testing of individual AIS contingency. This software maintains a current copy on the designated workstation, of all the inpatient pharmacy activities including the inpatient medication orders, medication administrations, and allergies that are included on a Pharmacy Medication Administration Record (MAR).

The Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 will interface with the BCMA VistA product to provide a real-time backup of all inpatient medication activities on a designated workstation(s). Designated workstation(s) will contain current information regarding inpatient medication orders (Unit Dose and IV), medication administration record (MAR), medication administration history (MAH), and patient allergies. Workstation(s) are updated using the VA Health Level (HL7) package. These workstation(s) are available for use according to local policies concerning VistA, BCMA, or network outages.

Benefits of This Guide

The Veterans Health Information Systems and Architecture (VistA) Bar Code Medication Administration Backup System (BCBU) Installation for patch PSB*3*8 provides detailed instructions required for installing and implementing this new software. Additional manuals are available with instructions for installing and implementing the new software on either a Linux or Caché workstation environment.

BCMA V. 3.0 and This Guide

Our Target Audience

This guide was developed for the following individuals, who are responsible for the installation, maintenance, support, and use of the package.

- Information Resources Management (IRM)
- Clinical Application Coordinator (CAC) – called Applications Package Coordinator (ADPAC) at some sites
- National VistA Support (NVS)
- Independent Verification and Validation (IV&V)

This Manual Includes

Security Information: This section contains information regarding the mail group, alerts, and file security associated with the Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 software.

Pre-Installation Information: This section provides information needed prior to installing the Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 software.

Installation Information: This section contains instructions and examples of the Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 software.

Technical Information: This section provides information on protocols involved in the Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 software.

Other Sources of Information

TIP:
Bookmark these sites for future reference.

For more background and technical information about BCMA V. 3.0, refer to the Web sites listed below.

Background/Technical Information

To access the BCMA Home page, enter http://vaww.vista.med.va.gov/bcma in the Address field of your browser. The BCMA Backup System Installation Guide can be accessed from the VistA Documentation Library (VDL) at http://www.va.gov/vdl/clinical.asp?appID=84. The document is available in MS Word (.doc) format and Adobe Portable Document Format (.PDF).

BCMA V. 3.0 and This Guide

Conventions Used in This Guide

Before installing patch PSB*3*8, review this section to learn the many conventions used throughout this guide.

- **Keyboard Responses**: Keys provided in boldface, within the steps, help you quickly identify what to press on your keyboard to perform an action. See the examples provided below.
  - ➤ **Within the Steps:** At the "Select Kernel Installation & Distribution System Option" prompt, type **INSTALL**, and then press **ENTER**.
  - ➤ **Within Screen Captures:** Text in **boldface**, centered between arrows on screen captures, identifies the key you must press for the system to capture your response or to move the cursor to the next field. See the following example.

DEVICE FOR QUEUED JOB OUTPUT: <**Enter**>

- **Mouse Responses:** Buttons provided in **boldface**, within the steps, indicate what you should click on your computer screen using the mouse. For example, when you see **NEXT, YES/NO,** or **OK** in the steps, click the appropriate button on your computer screen.
- **User Responses:** Information presented in **boldface**, within steps or shaded screen captures, indicate what you should "type" (enter) onto your computer screen. See the examples provided below.
  - ➤ **Within the Steps**: At the "Select OPTION NAME" prompt, type XPD MAIN and then press **ENTER**.
  - ➤ **Within Screen Captures**: See the following example.

BCMA V. 3.0 and This Guide

Conventions Used in This Guide (cont.)

RESCHEDULING FREQUENCY: **1M**

- **Screen Captures**: Provide "shaded" examples of what you will see on your computer screen, and possible user responses.
- **Notes:** Provided within the steps, describe exceptions or special cases about the information presented. They reflect the experience of our Staff, Developers, and Testers.
- **Menu Options**: When provided in italics, identifies a menu option. When provided in boldface, ALL CAPS, identifies the letters that you should type onto your computer screen, before pressing ENTER. The system then goes directly to the menu option. (Note: The letters do not have to be entered as capital letters, even though they are provided within the steps in this format.) See the examples provided below.
  - ➢ **Italicized:** Use the Kernel *First Line Routine Print* option to print a list containing the first line of every PSB routine.
  - ➢ **Capitalized:** At the "TaskMan Management Option:" prompt, type **Schedule**/Unscheduled Options, and then press **ENTER.**

Locating Detailed Listings

You can obtain and print listings about patch PSB*3*8 routines and Data Dictionaries using the information provided below.

Routines

Use the Kernel routine XINDEX to produce detailed listings of routines. Use the Kernel *First Line Routine Print* option to print a list containing the first line of every ALPB routine.

Data Dictionaries

The Data Dictionaries (DDs) are included in the on-line documentation for this software application. You can use the VA FileMan *List File Attributes* option, under *Data Dictionary Utilities* option, to print the Dictionaries. Journaling is not recommended for the ALPB global.

BCMA V. 3.0 and This Guide

Interface Software

The interface software is HL7. This will transmit the pharmacy data to the designated workstation.

Alerts

The mail group, PSB BCBU ERRORS, will receive all alerts.

BCMA Menus

Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 software exported two main menus. Patch PSB*3*8 added two options to the BCMA Backup System Management Menu option. The options for each menu are listed in this section.

- BCMA Backup System (Wrkstn)
  [PSB BCBU WRKSTN MAIN]
- BCMA Backup System (VistA)
  [PSB BCBU VistA MAIN]

BCMA Backup System (Wrkstn)
This menu includes the following options:

- List/Display Orders
- Print MAR for All Wards
- Print MAR for Selected Patient
- Print MAR for Selected Ward
- Print MAR for All Clinics
- Print MAR for Selected Clinics
- Print Blank MAR for Selected Patient
- List of Wards in BCMA Backup File
- BCMA Backup System Management Menu
  - ➢ *BCMA Backup System Error Log*
  - ➢ *Edit Workstation Parameter Settings*
  - ➢ *Purge Orders Past X days old*

BCMA Backup System (VistA)
This menu includes the following options:

- Associate Backup Workstations with a Division
- Default Workstation Initialize
- Divisional Worstation Initialize
- Initialize a Backup Workstation with BCMA Users
- Single Patient Init

Security Information

Mail Group	The PSB BCBU Errors Mail Group is used to notify responsible users of potential problems with sending information to the Contingency Workstation(s). Members of this group should include the staff that monitors the BCMA Backup System.
Remote Systems	The workstation where the software resides is the only remote system that will receive any data.
Archiving/Purging	The product purges itself and only keeps active inpatient data. The journal files are flipped and purged nightly so disk space is not consumed by journaling.
Contingency Planning	This contingency plan software can be used if there is a VistA outage. The sites can use the data stored on the workstations using the outputs on the menu supplied.
Menus	There are two menus for use with this package, BCMA Backup System (Wrkstn) and BCMA Backup System (VistA). The BCMA Backup System Management Menu is under the first menu and requires a Security Key as described below.
Security Keys	The BCMA Backup System Management Menu is secured by the security key, PSB BUMGR and MUST be assigned to the designated IRM personnel who currently manages the system for total access to the Bar Code Medication Administration Backup System.
References	Kernel Systems Manual V. 8.0 Kernel Toolkit V. 7.3 VA FileMan V. 22.0 MailMan V. 8.0 Health Level Seven (HL7) V. 1.6

Pre-Installation Information

Recommended Users	Information Resource Management (IRM) Staff is recommended for installing, implementing and supporting the Bar Code Medication Administration Backup System (BCBU) PSB*3*8. IRM, Pharmacy, and Nursing staff must coordinate the implementation of the setup tasks after the package is installed.
VistA Operating System and Performance Capacity	VistA Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 currently runs on the standard hardware platforms used by the Department of Veterans Affairs Health Care System facilities. These hardware platforms consist of standard or upgraded Alpha 4100, ES40, or ES45 clusters, and run either DSM on VMS, Caché/VMS, Caché/NT, or CachéXP. There are no significant changes in the performance capacity of the VistA operating system once the VistA Bar Code Medication Administration Backup System (BCBU) has been installed. The software application should not create any appreciable global growth or network transmission problems. There are no memory constraints.
Central Processing Unit (CPU) Requirements	The following workstation configuration is recommended for installing and running the VistA Bar Code Medication Administration Backup System (BCBU). Sites previously using the New Jersey Class III package should be able to use current workstations and Caché license. Hardware 1-2 Ghz CPU 256-512 Mb RAM 20 Gb hard drive - Monitor - Printer

Pre-Installation Information

Central Processing Unit (CPU) Requirements (cont.)	Software • Microsoft Windows XP, Windows 2000 or Windows NT with Intersystems Cache 5.x.x (4.1.4), (3.2.1) 20 user License or • RedHat Linux 8.0 with Greystone GT.M
Test Sites	VistA BCBU PSB*3*8 software was tested at the following VA Sites and platforms prior to being released: • San Francisco VA Medical Center, CA • Upstate New York HCS • Indianapolis VA Medical Center, IN • Central Alabama HCS • Memphis VA Medical Center, TN

Pre-Installation Information

Minimum Required Packages

Before installing BCBU PSB*3*8, make sure that your VistA system includes the following Department of Veterans Affairs (VA) software packages and versions (those listed or higher):

Package	Minimum Version Needed
Kernel	8.0
VA FileMan	22.0
VA MailMan	8.0
Health Level Seven (HL7)	1.6
Pharmacy Inpatient Medications	5.0
Bar Code Med Admin (BCMA)	3.0

Installation Time Estimates

VistA Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 installation time is less than 2 minutes during off peak hours. The time for workstation setup is approximately 30 minutes.

Important! You should install and test BCBU PSB*3*8 in your test accounts BEFORE installing in your production accounts.

Required Patches

Before installing PSB*3*8, make sure that the following released patch is installed:

Bar Code Medication Administration V. 3.0
PSB*3*7

Users on the System

Users may remain on the system; however, the VistA Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 installation should be done during off peak hours when minimal Pharmacy activity is occurring.

Options Out of Order

The options, *Inpatient Order Entry* [PSJ OE] and *Non-Verified/Pending Orders* [PSJU VBW] are to be placed out of order during installation.

Namespace

VistA Bar Code Medication Administration Backup System (BCBU) patch PSB*3*8 routine namespace is ALPB. The options/protocols/templates/parameters and keys use the PSB namespace. Files are distributed under the PSB namespace, but use ALPB global namespace.

Pre-Installation Information

Data Dictionary Changes	There are no changes made to the Data Dictionaries, but two new files have been added. These files are located on both the workstation and the VistA server, but are only populated on the workstation.

- **^ALPB(53.7,** BCMA Backup Data
- **^ALPB(53.71,** BCMA Backup Parameters

Journaling is not recommended for the ALPB global.

There is one Data Dictionary change to support Clinic Orders in BCMA with the install of PSB*3*73.

- CLINIC NAME field (#3.5) was added to the ORDER NUMBER file multiple field (#9).

Resource Requirements	This section summarizes the (approximate) number of resources required to install BCMA V. 3.0.

- Routines   29
- Globals   1 (^ALPB)
- Files   2 (53.7, 53.71)
- ^ALPB Size   Backup data= 268,288 bytes (131 blocks) per order

Note: Population of the ALPB global will only occur on the workstation, there is no global growth on the VistA server. ALPB global size estimate was acquired by dividing the number of blocks consumed by the total number of orders in file 53.7. This results in the number of blocks per order which is multiplied by 2048, which is the number of bytes per block in Cache.

- FTEE Support   .2
- FTEE Maintenance .2

Printers	Your site should provide dedicated printers for each of the contingency workstations, which would allow printing of the MAR or MAH if the network was down.

Note: The printer must have the capability to print 132 characters per line.

Pre-Installation Information

Routines Installed

Review the listing below to learn the routines installed on your site's VistA Server during the installation of patch PSB*3*8. The first line of each routine briefly describes its general function.

Note: You can use the Kernel *First Line Routine Print* option to print a list containing the first line of each ALPB routine.

Installation Information

VistA Server Installation Instructions

VistA Bar Code Medication Administration Backup System (BCBU) patch PSB*3*73 distribution is done by using the VA KIDS package. An example of this installation is found at the end of this installation guide.

PC Workstation Database Initialization

Once the PC Workstation(s) have been setup and assigned an IP address, proceed with setting up the workstation link.

Create a link (node) for the PC workstation. This will be the regular transmission node. Name it "BC" and the ward. For example, if the ward is 2A the link could be called "BC 2A". This will indicate that the link is tied to a BCBU package and where the contingency workstation is located. Use the *Link Edit* [HL EDIT LOGICAL LINK] option of the HL Interface menu. An example of this installation is found at the end of this installation guide in the Sample PC Workstation Database Initialization Section.

Installation Information

MAR Reports	Various MAR reports are located at the end of this installation guide under the Contingency PC Workstation Reports Section.

Please refer to the following documents for additional Installation Information:

BCMA Backup System (BCBU) InterSystems Cache Installation Setup	Refer to "Bar Code Medication Administration Backup System (BCBU) InterSystems Caché Installation Setup" guide for a systematic installation of Caché install on a PC workstation.
BCMA Backup System (BCBU) Linux Installation Setup	Refer to "Bar Code Medication Administration Backup System (BCBU) Linux Installation Setup" for systematic installation of Linux on a PC workstation. This manual also includes step-by-step installation of GT/M, VistA, and the Bar Code Medication Administration Backup System (BCBU) on the Linux workstation.

Sample PC Workstation Database Initialization

When initializing the workstations, you add an entry at the HL Logical Link Node prompt for each pc workstation your site has. The name of each link should represent the actual workstation location. For example, if you have a workstation on Ward 2A, the name of the workstation should be BC 2A. Associating the name of the HL Logical Link Node with the ward where the workstation is located, will aid in locating specific workstations should a problem arise. Once you have initialized the workstation with the correct workstation location, you can update the workstation with the users from the VistA system that have the [PSB GUI CONTEXT - USER] option. This initialization process will queue the activity and when complete send an alert.

On new installations, check the Parameter Value. The parameter can be left off until the workstation is ready to be initialized. If the workstation is already running, **do not** turn the Parameter Value off. Use the *General Parameter Tools* [XPAR MENU TOOLS] option to edit the parameter values.

```
XPAR MENU TOOLS      General Parameter Tools

  LV     List Values for a Selected Parameter
  LE     List Values for a Selected Entity
  LP     List Values for a Selected Package
  LT     List Values for a Selected Template
  EP     Edit Parameter Values
  ET     Edit Parameter Values with Template
  EK     Edit Parameter Definition Keyword

Select General Parameter Tools Option: ep Edit Parameter Values
                    --- Edit Parameter Values ---

Option Descriptions

PSB BCBU MANAGEMENT MENU
BCMA Backup System Management Menu

This Menu contains all Management options for the BCMA Contingency
(Workstation Menu)

TYPE: menu
ITEM: PSB BCBU ERROR LOG
ITEM: PSB BCBU WRKSTN PARAMETER EDIT
ITEM: PSB BCBU WRKSTN PURGE ORDERS

PSB BCBU ERROR LOG
BCMA Backup System Error Log

This option is used to view the Error Log. (Workstation Menu)

TYPE: run routine   Routine: ALPBELOG

PSB BCBU WRKSTN PARAMETER EDIT
Edit Workstation Parameter Settings

This option will allow the user to edit Site definable parameter settings for
the BCMA Contingency Workstation. (Workstation Menu)

TYPE: ScreenMan
  DIC {DIC}: ALPB(53.71,   DIC(0): A
  DIC(A): Workstation Parameter: DR{DDS}: [PSB BCBU PARAMETERS]
  DDSFILE: 53.71   DDSPAGE: 1

PSB BCBU WRKSTN PURGE ORDERS
Purge Orders Past X days old

This option purges order information based on stop date first. Purge is also
based on parameter setting for number of days to hold patient orders (default
is 7 days) and parameter setting for number of days to hold patient record
(default is 30 days with no order information). (Workstation Menu)

TYPE: run routine   Routine: ALPBOP

PSB BCBU WRKSTN MAIN
This is the main menu for the BCMA Backup system -- the ward workstation
containing the BCMA backup/contingency data. (Workstation Menu)
TYPE: menu
ITEM: PSB BCBU SHOW PATIENT
ITEM: PSB BCBU PRINT MAR ALL
ITEM: PSB BCBU PRINT MAR PATIENT
ITEM: PSB BCBU PRINT MAR WARD
ITEM: PSB BCBU MANAGEMENT MENU
ITEM: PSB BCBU WARD LIST
ITEM: PSB BCBU PRINT BLK MAR
ITEM: PSB BCBU PRINT MAR ALL CLINICS
ITEM: PSB BCBU PRINT MAR CLINIC

Technical Information

PSB BCBU SHOW PATIENT
List/Display Orders

This option will display orders to the screen by individual patient.
(Workstation Menu)

TYPE: run routine   ROUTINE: ALPBSPAT

PSB BCBU SHOW WARD
Display Orders for Selected Ward

This option will display orders to the screen by Ward. (Workstation Menu)

TYPE: run routine   ROUTINE: ALPBSWRD

PSB BCBU PRINT MAR ALL
Print MAR for All Wards

This option prints a MAR report for all wards. (Workstation Menu)

TYPE: run routine   ROUTINE: ALPBPALL

PSB BCBU PRINT MAR PATIENT
Print MAR for Selected Patient

This option prints a MAR report by individual patients. (Workstation Menu)

TYPE: run routine   ROUTINE: ALPBPPAT

PSB BCBU PRINT MAR WARD
Print MAR for Selected Ward

This option prints a MAR report by individual wards. (Workstation Menu)

TYPE: run routine   ROUTINE: ALPBPWRD

PSB BCBU WARD LIST
List of Wards in BCMA Backup File

This option will display all the wards available on the workstation.
(Workstation Menu)

TYPE: run routine   ROUTINE: WARDLIST^ALPBUTL

PSB BCBU PRINT BLK MAR
Print Blank Mar for Selected Patient

This option allows the user to select a patient from the BCMA contingency and
print a blank 3 or 7 day MAR. The MAR will only contain patient info.

TYPE: run routine   ROUTINE: ALPBBK

Technical Information

PSB BCBU PRINT MAR ALL CLINICS
Print MAR for All Clinics

This option prints a MAR report for all the clinics available on the
workstation. (Workstation Menu)

TYPE: run routine   ROUTINE: EN^ALPBPCLN("ALL")

PSB BCBU PRINT MAR CLINIC
Print MAR for Selected Clinic

This option prints a MAR report for a selected clinic.
(Workstation Menu)

TYPE: run routine   ROUTINE: EN^ALPBPCLN("CLN")

PSB BCBU VISTA MAIN
BCMA Backup System (VISTA)

This is the Primary Menu for the BCMA Backup Contingency. (VISTA Menu)

TYPE: menu
ITEM: PSB BCBU INIT WRKSTN DFT
ITEM: PSB BCBU INIT WRKSTN DIV
ITEM: PSB BCBU LINK ASSOCIATIONS
ITEM: PSB BCBU USER INIT
ITEM: PSB BCBU INIT SINGLE PT

PSB BCBU INIT WRKSTN DFT
Default Workstation Initialize

This option is used to initialize Workstations that are linked as default.
This option will send inpatient and clinic orders to the BCMA Contingency to
all or selected workstations. For non-divisional sites. (VISTA Option)

TYPE: run routine   ROUTINE: OPT^ALPBIND

PSB BCBU INIT WRKSTN DIV
Divisional Workstation Initialize

This option is used to initialize Workstations that are linked by Division.
This option will send inpatient and clinic orders to the BCMA Contingency
workstation for all or selected divisions. For multi-divisional sites only.
(VISTA Option)

TYPE: run routine   ROUTINE: OPT^ALPBIN

PSB BCBU LINK ASSOCIATIONS
Associate Backup Workstations with a Division

For sites running the REAL-TIME BCMA BACKUP interface, use this option to
assign your backup workstations to specific divisions. If you are not a
multidivisional site, associate all backup workstations with a single
division.

Technical Information

When HL7 events occur, the division associated with the patient will be used to determine which workstations will get the message. (VISTA Menu)

TYPE: run routine   ROUTINE: ALPBPARM

PSB BCBU USER INIT
Initialize a Backup Workstation with BCMA Users

This option searches the VISTA New Person file for authorized BCMA users and generates a version 2.4 HL7 message. Messages are addressed dynamically based on the parameter definitions for BCMA Backup using divisions or the default group.

TYPE: run routine   ROUTINE: INIT^ALPBGEN2

PSB BCBU INIT SINGLE PT
Single Patient Init

This option will send inpatient and clinic orders to the BCMA Contingency workstation for a single patient.

TYPE: run routine   ROUTINE: SNDPT^ALPBIND

Technical Information

Parameter Definitions

PSB BKUP DEFAULT
DISPLAY TEXT: Package-specific 'default' Logical Links
MULTIPLE VALUED: Yes
INSTANCE TERM: Logical Link
VALUE DATA TYPE: pointer
VALUE DOMAIN: 870
VALUE HELP: Enter the HL7 logical link
INSTANCE DATA TYPE: pointer
INSTANCE DOMAIN: 870
INSTANCE HELP: Enter the HL7 logical link
DESCRIPTION: This parameter is used by the BCMA Backup system to route messages to a
"default" group of HL7 Logical Links that are associated with the BCMA package rather than
individual divisions. When the default group is defined, all messages will be routed to this group
rather than using division-based grouping under the following conditions:

1. If a call is made to the API, GET^ALPBPARM, and the division parameter is not present or
    null.
2. If a call is made to the API, GET^ALPBPARM, and the division specified has no logical
    links associated with it.

    PRECEDENCE: .5

ENTITY FILE: DIVISION

Technical Information

PSB BKUP ONLINE

DISPLAY TEXT: BCMA Contingency Online
VALUE DATA TYPE: yes/no
DESCRIPTION: This parameter is used by the BCMA Backup system to activate the
Contingency software. If the value is set to NO, then no HL7 messages will be sent to the
Workstation. This does not affect the workstation initialization option.
PRECEDENCE: 1
ENTITY FILE: PACKAGE

PSB BKUP IPH

DISPLAY TEXT: BCMA Contingency Active Pharm Order
VALUE DATA TYPE: numeric
DESCRIPTION: The BCMA Backup Contingency software uses this parameter. During the
Workstation initialization process, this tells the process how many days of historic Inpatient
Medication and Clinic Orders to capture. It is based off the fact the order was active during that
time.
PRECEDENCE: 1
ENTITY FILE: PACKAGE

PSB BKUP MEDLG

DISPLAY TEXT: BCMA Contingency MedLog DFT
VALUE DATA TYPE: numeric
DESCRIPTION: The BCMA Backup Contingency software uses this parameter. During the
Workstation initialization process, this tells the process how many days of historic Med Log
entries of Inpatient Medication and Clinic Orders to capture.
PRECEDENCE: 1
ENTITY FILE: PACKAGE

PSB BKUP DOM FILTER

DISPLAY TEXT: Filter out DOM patients
MULTIPLE VALUED: No
VALUE DATA TYPE: yes/no
VALUE HELP: Should the contingency backup filter out DOM patients?
DESCRIPTION: This parameter is used by the BCMA backup system to determine if DOM
 patients are included in the backup. If the value is set to YES, DOM patients will be filtered out
of the backup and will not be sent to the workstation. If the value is NO or blank, DOM patients
will be sent to the backup workstation.

Technical Information

Files Associated with GT.M/Linux BCMA:

The following files are provided with the GT.M version of Bar Code Medication Administration Backup System (BCBU) and are unpacked from the bcma_files.tar.gz file into $HOME of the BCMA manager account.

.bashrc – this is the BCMA manager's *$HOME*/.bashrc file. This file defines GT.M related global variables, sets convenient aliases and sets terminal characteristics. This file may be edited but all GT.M variable and terminal definitions should be retained to guarantee the proper functioning of the GT.M database.

bcmabashrc – *install_bcma* creates a generic "bcma" Linux account tied to VistA. *bcmabashrc* is renamed to */home/bcma/.bashrc* and is called with each "bcma" user login. The call to this file ties the user to VistA and prevents access to the Linux or GT.M level as well as defining GT.M related global variables.

bcma.gld – this is the GT.M global directory file which defines the location of the BCMAbu database. *install_bcma* edits this file automatically to account for the directory structure specified by the installer. The GT.M database utility, GDE, accesses this file.

cronjrnclean – this file is used to generate the crontab procedure (found in /var/spool/tar/bcma_manager_name) which runs nightly to flip the GT.M journal file, remove old journal files and remove temporary GT.M process related files in the manager's $HOME. This file is only used once during the BCMA install.

gcomp - run this file at your GT.M manager to recompile all M routines. At times, compiled objects may end up with the wrong user ownership (for example, if patches were installed and run as root). Run this script to correct such situations.

jrnclean – this file is called by /var/spool/tar/bcma_manager_name nightly at 1:00am to flip the GT.M journal file, remove old journal files and remove temporary GT.M process related files in the BCMA manager's $HOME.

jrnoff - this file may be used to turn journaling off. Note that journaling is automatically enabled with every reboot of the system by *rc.local*.

jrnon – this file may be used to turn journaling on or flip the current journal file to a new one. It is called by *jrnclean*. Journal files are found in $HOME/jrn of the bcma manager.

netmail_start – this file is called by *rc.local* during runlevel 5-system startup to start network mail on port 25. If netmail needs to be started manually, run this file as root (other users will not have the privileges to connect a process to port 25).

Technical Information

rc.local – this is a user-editable Linux file found in /etc/rc.d and is called during system startup and shutdown. This file calls *$HOME/recoverall*, *$HOME/jrnon*, *$HOME/taskman_start* and *$HOME/netmail_start* during system startup. It will call *$HOME/zgstop* during system shutdown. If *rc.local* is successful in each of these calls, the following empty files will be created in $HOME of the BCMA manager account: *recoverys, TaskMan, netmails*, and *rundowns*.

recoverall – this file is called by *rc.local* during system startup and attempts to recover the database should the system be shutdown uncleanly.

taskman_start – this file starts TaskMan automatically during system startup. If TaskMan needs to be started manually, run *taskman_start* as root (TaskMan automatically starts HL7 processes – the LISTNER link needs to connect with port 10000).

VistA – this script resides in the /home/bcma and /home/gtm manager directories and is called by the icon file $HOME/.gnome-desktop/ VistA -icon for the respective users

*-icon - these are the desktop icon files. The BCMA and GT.M manager users both have the VistA -icon, which will bring the user to the access/verify prompts. In addition to this, the GT.M manager user will also have the term-icon and editor-icon on its desktop to open a terminal session and gedit text editor, respectively.

zgstop - this file is called by *rc.local* during system shutdown to shutdown GT.M cleanly and performs a recovery if needed. Call this file as root if GT.M needs to be shutdown (only the root user will be permitted to stop ALL GT.M processes – if another user call zgstop, only its own processes will be shutdown). This file is derived from */usr/local/gtm/gstop*.

Technical Information

Adding a BCMA printer to the Cache/NT Contingency system:

Contingency Workstation (VistA) printer:

Slave printers are defined in VistA as P22O/102 SLAVE CACHE/NT.
Test the printer through VistA.

DEVICE file entry:

```
NAME: P22O/102 SLAVE CACHE/NT             $I: 0
  ASK DEVICE: NO                          ASK PARAMETERS: NO
  LOCATION OF TERMINAL: slave device for Cache/NT
MNEMONIC: SLAVE
  SUBTYPE: C-VT220                        TYPE: TERMINAL
```

Network printer:

From the NT menu:

1. ***Start/Settings/Printers/Add Printer.***
2. Select the ***My Computer*** radio button then ***Next*** to continue.
3. Click the ***Add Port*** button.
4. Double click the ***LPR Port*** then fill in the IP address of the device and the name then ***Close*** to continue.
5. Make sure the box for the newly created port is checked then ***Next*** to continue.
6. Select the printer driver (note - you may need the NT install CD handy for this step) then ***Next*** to continue.
7. Enter the printer name then ***Next*** to continue
   Note: this is the value that will be used in the $I below.
8. Select shared or not shared then ***Next*** to continue.
9. Try printing a test page; at this point, NT might start requesting the install CD for specific drivers.

From the W2K menu:

1. ***Start/Settings/Printers/Add Printer***.
2. ***Next*** at the welcome add printer wizard box.
3. Select the ***Local Printer*** radio button and uncheck the automatic detection for plug and play devices then ***Next*** to continue.
4. Select the ***Create a new port*** radio button then select either ***LPR*** or ***Standard TCPIP port*** from the dropdown menu.
   - For LPR:
     o Fill in the IP address of the device and the name, then ***Close*** to continue.

Technical Information

- For TCP/IP:
  - o Click *Next* to continue in the welcome wizard window.
  - o Enter the printer name or IP address then *Next* to continue.
5. Select the driver, then *Next* to continue.
6. Enter the printer name, then *Next* to continue
   Note: this is the value that will be used in the $I below.
7. Share or not, then *Next* to continue.
8. Print a test page, then *Next* to continue.

From within Contingency Workstation (VistA) Printer

1. No special terminal types need to be used for Cache/NT network printing. Several HP-LASER terminal types are available in the TERMINAL TYPE file as installed.
2. Create a new entry in the DEVICE file as per the example below. $I syntax is |PRN|\\bcmaservername\LPR device defined above. In the example below, the A410 printer was defined as an LPR port through NT. The server name is VHAISADHC1
3. Test the printer through VistA.

Examples:

DEVICE file entry:

```
NAME: A410                               $I: |PRN|\\VHAISADHC2\A410
  LOCATION OF TERMINAL: A410             SUBTYPE: P-HP-P16
  TYPE: TERMINAL
```

TERMINAL TYPE file entries:

```
NAME: P-HPLASER-P10                      RIGHT MARGIN: 80
  FORM FEED: #                           PAGE LENGTH: 64
  BACK SPACE: $C(8)                      OPEN EXECUTE: W *27,"E"
  CLOSE EXECUTE: W *27,"E"               PROPORTIONAL SPACING: $C(27)_"(s1P"
  DESCRIPTION: LASER PRINTER PORTRAIT MODE 10 CPI

NAME: P-HP-P16                           RIGHT MARGIN: 132
  FORM FEED: $C(12,13)                   PAGE LENGTH: 58
  BACK SPACE: $C(8)                      OPEN EXECUTE: W
$C(27),"E",$C(27),"&k2S"
  CLOSE EXECUTE: W $C(27),"E"            DESCRIPTION: HP LASER JET 16 PITCH
```

Technical Information

Adding a BCMA printer to the GT.M/Linux Contingency system:

Contingency Workstation (VistA)

From the Linux menu:

1. Select *System Settings* then *Printing*.
2. In the Red Hat printer config windows click *New* to create a new printer queue.
3. Read the instructions then click *Forward* to continue.
4. Specify 'local' or 'LOCAL' as the name for the new printer and select *local printer* radio button, then click *Forward* to continue.
5. Accept */dev/lp0* as printer device to use, then click *Forward* to continue.
6. Select the driver for your local printer, then click *Forward* to continue. *Postscript Printer* is usually acceptable for HP printers.
7. Click *Apply* button to restart LPD.
8. You may test the printer by selecting it in the Red Hat printer config window, then selecting *Test* from the horizontal menu.

From within Contingency Workstation (VistA)

1. P220/102 SLAVE GTM/LINUX entries are already pre-defined in VistA DEVICE file.
2. Test the printer through VistA.

DEVICE file entries:

```

  CLOSE EXECUTE: U IO K IO(1,IO) C IO ZSYSTEM "lpr -r "_IO
```

Network printer:

From the Linux menu:

1. Select *System Settings* then *Printing*.
2. In the Red Hat printer config windows click *New* to create a new printer queue
3. Read the instructions then click *Forward* to continue.
4. Specify the name of the new printer (example: A405) and select either the *Unix Printer* or *Jetdirect Printer* radio button as type (**Note:** Unix printer uses port 515 and Jetdirect uses port 9100), then click *Forward* to continue.
   a. if Unix printer: Enter the printer hostname or IP in the *Server* box - no need to enter queue information.
   b. if Jetdirect printer: Enter the printer hostname or IP in the *Printer IP* box - accept 9100 as the port value then click *Forward* to continue.
5. Select the driver for your network printer, then click *Forward* to continue*.*
   Note: *Postscript Printer is* usually acceptable for HP printers.
6. Click *Apply* button to restart LPD.
7. You may test the printer by selecting it in the Red Hat printer config window, then selecting *Test* from the horizontal menu.

From within Contingency Workstation (VistA)

1. P-TCP * GTM/LINUX entries are already pre-defined in VistA TERMINAL TYPE file. You may use the VA FileMan *Transfer File Entries* option to create new terminal types using these as templates. Edit the OPEN EXECUTE fields accordingly to vary print characteristics.

Technical Information

2. Create a new DEVICE file entry.
    a. **Note:** The name of the new DEVICE must begin with the name of the Linux printer created above FOLLOWED BY A SPACE then a description (Example: "A405 - ADMIN 10/6/UP"). The CLOSE EXECUTE field of the TERMINAL TYPE being used parses the queue name from the first space backward)
    b. I$'s for network printers are normally /home/*Linux bcma mgr acct*/hfs/devicename.txt
    c. Device TYPE - HFS
3. Test the printer through VistA.

Examples:

DEVICE file entries:

```
NAME: A405 10/6/UP                    $I: /home/gtmmgr/hfs/A405.dat
  ASK DEVICE: NO                      ASK PARAMETERS: NO
  LOCATION OF TERMINAL: A405          ASK HOST FILE: NO
  SUPPRESS FORM FEED AT CLOSE: YES    OPEN PARAMETERS: newversion
  SUBTYPE: P-TCP 10/6/UP GTM/LINUX    TYPE: HOST FILE SERVER
```

```
NAME: A405 16/6/UP                    $I: /home/gtmmgr/hfs/A405.dat
  ASK DEVICE: NO                      ASK PARAMETERS: NO
  LOCATION OF TERMINAL: A405          ASK HOST FILE: NO
  SUPPRESS FORM FEED AT CLOSE: YES    OPEN PARAMETERS: newversion
  SUBTYPE: P-TCP 16/6/UP GTM/LINUX    TYPE: HOST FILE SERVER
```

Technical Information

Workstation Queued Tasks

The following tasks should be queued to run on the workstation. All except XMMGR-PURGE-AI-XREF (which has a rescheduling frequency of 7D) should have a rescheduling frequency of 1D. The GT.M and Cache dat files where released with these jobs scheduled properly but they should be checked, once TaskMan is started, to make sure they have run and are being rescheduled.

The following capture shows how to list the currently queued workstation tasks and verifies that the HL PURGE TRANSMISSIONS task has been rescheduled. Check the TaskMan error log should the jobs not appear to be run or scheduled properly.

```
Select Systems Manager Menu Option:

         Core Applications ...

Quick Reference Installation Checklist

Action	Where	Completed
1. Install patch PSB*3.0*8	VistA	_____
A. FTP Software from an OI Field Office		_____
B. Install using Kids		_____
2. Workstation Setup		
Note: Ensure that the workstation has a static IP Address.		
A. Windows/Caché		
1. Setup Caché – InterSystems supplies software. Example of install can be found in the manual, "Bar Code Medication Administration Backup System (BCBU) InterSystems Cache Installation Setup".	Workstation	_____
2. Shutdown Caché		_____
3. Copy cache.dat file that was downloaded from the FTP site into C:\CACHESYS\folder. (If asked to replace file, answer yes.)		_____
4. Remove the Read-Only attribute from the cache.dat file.		_____
5. Ensure telnet is enabled in Caché Configuration.		_____
6. Move ZSTU routine from VistA namespace to %SYS namespace.		_____
7. Setup Telnet and Terminal users using Caché Control Panel.		_____
8. Stop and Restart Caché.		_____
9. Create BCMA Backup shortcut.		_____
B. Linux/GT.M		
1. Install Linux onto clean system	Workstation	_____
2. Example of install can be found in the manual, "Bar Code Medication Administration Backup System (BCBU) Linux Installation Setup. Make note of username entered and its password for future use. Also, remember the root password.		_____

Quick Reference Installation Checklist

Action	Where	Completed
3. Sign into Linux using the user created during the installation.		_____
4. Enter super user mode ($ <u>su</u>)		_____
5. Copy downloaded Linux files to an accessible location.		_____
6. Ensure downloaded file has correct permissions.		_____
7. Run the install script. (./install_bcma) **Note:** BCMA manager account will be the user you created during the Linux install.		_____
8. Edit the TaskMan Site Parameters to enter the correct Box-Volume pair.		_____
9. Restart TaskMan.		_____
3. Workstation Database Initialization		_____
A. On new installs check the parameter PSB BKUP ONLINE VALUE=yes	VistA	_____
B. Add a new link using HL7 options.	VistA	_____
C. Associate the new link to a division using PSB BCBU VistA MAIN option.	VistA	_____
D. Start the new link using HL7 options.	VistA	_____
E. Check the HL7 Site Parameter to make sure the field, "Is this a Production or Test Account", is set correctly. It must match the setting in the Vista account sending the messages	Workstation	_____
F. Start the LISTNER link using HL7 options.	Workstation	_____
G. Review the Parameter settings and verify that all task jobs have been queued properly. This is described in the Workstation Queued Tasks section of this documentation.	Workstation	_____
H. Initialize the workstation using Default or Divisional Workstation initialize option.	VistA	_____

Trouble Shooting Guide

The messages are building on the VistA side, but I see an open fail in the link monitor.

Check the following areas:
- The IP address on both and make sure they match.
- The Port numbers on both and make sure they match.
- The Firewall on the workstation.
- The Filers on the workstation.
- The Link Manager on the workstation.

When logging into the Cache Terminal on the workstation I get a <FILEFULL> error. When looking at the HL7 System Link Monitor on VistA the BCBU Workstation shows a READ ERROR state.

This may be caused by the BCBU workstation reaching its defined maximum allowed database size. To increase the size of the BCBU workstations database go into the Cache Cube / Control Panel / Local Databases. Right click on VISTA and select properties. If the database has reached the maximum defined the fields # of MB and Max # of MB will be equal. To increase the size edit only the Max # of MB field. (**Note:** Make sure the physical hard drive has enough space available for the increase in the database size)

When logging into the Cache Terminal on the workstation I get a <NOROUTINE> error.

Verify that the two user accounts setup under the Cache Cube / Control Panel / Security / User Accounts are set to VISTA Namespace and ^ZU Routine.

The messages appear to be transmitting but no data is filing on the workstation.

Verify that the HL COMMUNICATION SERVER PARAMETERS field, "DEFAULT PROCESSING ID" is set correctly. This field must match the value of the sending VistA system. In addition, verify that INCOMING and OUTGOING HL7 filers are running on the workstation.

I don't see the message queue increase for my HL7 link when I run the 'Initialize Workstation" option or during activity on the VistA side?

The following two places need to be checked:

Make sure the Link is enabled on the VistA side. *HL7 Main Menu* [HL MAIN MENU] option. Make sure the Workstation Link is associated to the correct division or Default parameter. [PSB BCBU LINK ASSOCIATIONS] option.

Trouble Shooting Guide

I'm able to start TaskMan up with the Taskman_start script, but I notice that the HL7 link jobs do not start. What could be the problem?

Linux requires root privs to start listener jobs on TCPIP ports. TaskMan needs to be started by the root user so its submanagers (which start the listener) can have those privs as well. To do this, login as the BCMA Manager the issue the command "su –m" and enter the root password. Once you're logged in as root, start TaskMan by issuing the command "./taskman_start". The HL7 link manager and the listener link should start automatically. **Note:** Netmail startup has root requirements as well.

Running the netmail_start script does not start netmail. What could be the problem?

Linux requires root privs to start listener jobs on TCPIP ports. To start up the network mail listener job, log in as the BCMA Manager, then issue the command "su –m" and enter the root password. Once you're logged in as root, start network mail by issuing the command "./netmail_start". **Note:** HL7 links have root requirements as well.

How can I verify the TCPIP listening jobs on Linux?

As root, issue the "netstat –tlp" command. This will provide information similar to the following:

```
Proto Recv-Q Send-Q Local Address          Foreign Address       State        PID/Program name
tcp        0      0 *:32768                 *:*                   LISTEN       523/rpc.statd
tcp        0      0 BCMA.med.va.gov:32769 *:*                     LISTEN       628/xinetd
tcp        0      0 *:printer               *:*                   LISTEN       658/lpd Waiting
tcp        0      0 *:sunrpc                *:*                   LISTEN       504/portmap
tcp        0      0 *:10000                 *:*                   LISTEN       1174/mumps
tcp        0      0 *:5904                  *:*                   LISTEN       13884/Xvnc
tcp        0      0 *:x11                   *:*                   LISTEN       813/X
tcp        0      0 *:ftp                   *:*                   LISTEN       628/xinetd
tcp        0      0 *:ssh                   *:*                   LISTEN       614/sshd
tcp        0      0 *:telnet                *:*                   LISTEN       628/xinetd
tcp        0      0 *:smtp                  *:*                   LISTEN       1390/mumps
```

Ports of primary interest are 10000 (HL7 listener link) and SMTP (port 25-netmail).

To see the numeric ports for common TCPIP protocols, issue the "netstat –tlp – numeric" command.

What is the best way to shut GT.M down?

$HOME of the BCMA manager account contains the script zgstop. This script is customized to shut down the BCMA configuration cleanly and run the GT.M database down (to ensure database integrity). To use this script properly, it must be run as root (the BCMA manager will not be able to shutdown HL7 link, netmail, and TaskMan jobs started as root - this will prevent the database to rundown properly). To do this, login as the BCMA manager then issue the command "su -m" and enter the root password. Once you're logged in as root, issue the command './zgstop'.

Trouble Shooting Guide

How do I start GT.M up?

There is no single GT.M daemon. This means that each GT.M process 'starts' GT.M for itself. GT.M processes (TaskMan, netmail, HL7 jobs) should start automatically with a system reboot provided the /etc/init.d/gtm script was enabled when BCMA was installed using the install_bcma script.

From within GT.M, how can I view system status (like when I D ^%SS in Cache)?

GT.M does not provide a utility of its own to provide this functionality. However, SD&D have provided the ^ZSY routine to accomplish this. As with other BCMA tasks, it is best to run this as the root user; otherwise, not all process information will be accessible. To do this, login as the BCMA manager, then issue the command "su -m" and enter the root password. Drop into GT.M, issue the ZSY command as follows, and select the type of display desired.

GTM>D ^ZSY
1 pid
2 cpu time

I'm getting <RECOMPILE> errors when working on the Caché system.

If you are getting this error, the routines need to be recompiled on the workstation. There are two different methods you can use to accomplish this:

CHUI
1. Get to the programmer prompt on the workstation.
2. D ^%RCOMPIL
3. At the routine selection prompt, select %*, press **Enter**.
4. Repeat the D ^%RCOMPIL command and select * at the routine selection prompt.

GUI
1. Right-click on the Cache cube and select Explorer.
2. On the left side of the screen expand VistA under the Local Databases, select routines.
3. In the routine selection box, enter %*
4. From the Edit menu, click on Select All.
5. In the Contents screen on the right, right-click, then click Advanced/Compile.
6. Repeat steps 3-5, selecting * in the routine selection.
